**GROSS, Onan Bowman**, of Camden, New Jersey, was born in Ephrata, Lancaster county, Pennsylvania, February 19, 1851, and is a lineal descendant in the fifth generation of George Gross, who emigrated from Germany to North Carolina about 1747, and Daniel Bowman, of Germany, in 1738, who settled at Ephrata, Lancaster county, Pennsylvania. His nationality, therefore, is German, excepting a great grandfather, Col. John Wright, of Revolutionary fame, who emigrated from Ireland just prior to the Revolution. The preliminary education of Dr. Gross was obtained at the Ephrata Academy. In 1875 he matriculated at the University of Pennsylvania with Drs. H. C. Chapman and Reynell Coates as preceptors;

graduated in 1878, and received the H. Lenox Hodge gold medal for anatomical proficiency and distinguished merit for his thesis. He has been in continuous practice in Camden, New Jersey, since graduation, and has filled such positions as County Physician and District Sanitary Inspector for the State Board of Health, and secretary of the Board of United States Pension Examining Surgeons. He is a member of the Pathological Society of Philadelphia, American Medical Association, and all local medical societies. Dr. Gross is now Lecturer on Anatomy and Clinical Surgery for the Camden Training School for Nurses, and a

Surgeon on the staff of the Cooper Hospital since 1884. He has been a liberal contributor to many medical journals, the subjects being usually surgical or pathological. The principal papers written were the following: "Complete Arteria of the Vagina," "Foreign Bodies in the Bronchial Bifurcation," "Extra-Uterine Pregnancies," and "Rare Cases of Abdominal Surgery," issued a few years ago.

**GULICK, Charlton R.**, of New York City, was graduated M. D. at Bellevue Hospital Medical College in 1882. He is now Consulting Physician to the Skin and Venereal Department of Amity Dispensary, and Examiner in Lunacy for the State of New York. Dr. Gulick is an active member of numerous medical societies of New York City and State, and of the American Medical Association.

**GUNN, Moses**, of Chicago, Illinois, was born in East Bloomfield, Ontario county, New York, April 20, 1822, and died November 4, 1887. His father, Linus Gunn, and mother, Esther (Bronson) Gunn, were natives of Massachusetts and pioneers of Western New York. The family trace their ancestry in Scotland through a long series of lairds into a very remote past. Although prevented by dangerous and protracted illness from passing through a regular collegiate course, he received a thorough academical education, and graduated at

Geneva Medical College in 1846. He settled in Ann Arbor, Michigan, and commenced practice. Contemporaneously he instituted a course of anatomical lectures, which was attended by a class of thirty or more students and practitioners. This was the first systematic course of lectures on anatomy given in that State. The course was repeated through three successive years, when, upon the organization of the Medical Department of the State University, he was appointed over numerous competitors to the chair of Anatomy and Surgery. For three years he gave the lectures upon these departments, each course extending to seven months. After that time he was relieved from the anatomical teaching, and during the remainder of his connection with the institution, some fifteen years, filled the chair of Surgery. In 1853 he removed to Detroit, visiting Ann Arbor twice a week to deliver his lectures. In 1856 he received the honorary degree of A. M. from Geneva College. In 1857 he became senior editor of the *Medical Independent*, a monthly journal, which eventually was merged with another medical periodical, of which for some time he was one of the editors. In 1851-52 he made a series of dissections and experiments to determine what particular tissue opposes the effort to reduce dislocations, particularly of the hip and shoulder-joints. These were repeated for several sessions before the medical classes. The results and details of the processes by which they were arrived at were embodied in a paper read before the Detroit Medical Society in the summer of 1853, and were also published in the *Peninsular Medical Journal* in September of that year. The first class to which he lectured in the University was then considered remarkably large, though numbering but ninety-two; the last class, session 1866-67, numbered five hundred and twenty-five. Dr. Gunn entered the medical department of the army in September, 1861, accompanying General McClellan through the Peninsular campaign, seeing much active and arduous service. During a short absence he gave some fifty lectures to the students at the University, filled with just the kind of information needed by the large number who soon after entered the army. In the spring of 1867, at the unanimous invitation of the Faculty and Trustees of Rush Medical College, he accepted the chair vacated by the death of the distinguished surgeon and teacher, Daniel Brainard, M. D., the position which he occupied until his death. The prosperity of the Rush Medical College during the period of his connection with that institution was largely due to his business energy, his professional skill and personal popularity as a teacher. At the commencement exercises of the University of Chicago in 1877, he was honored with the degree of LL. D. He was married in 1848 to Jane Augusta Terry, daughter of J. M. Terry, M. D. Three children survived, the eldest son, Glyndon, a youth of remarkable promise, having been accidentally drowned at Detroit. Professor Gunn was a member of the city and State Medical Societies; and of the American Medical Association. Besides his position in the Medical College, he was Surgeon to Cook County Hospital (the principal hospital in Chicago); Surgeon to St. Joseph's Hospital; Consulting Surgeon to St. Luke's Hospital, and several other minor charities. He had not contributed largely of

late to the medical press, preferring to bring all the treasures of his long and ripe experience and reading to those who from year to year came up to personally profit by his teaching. He was a man of elegant personal appearance, affable in manners and an interesting lecturer. He not only maintained a good reputation until his death, but contributed largely to the renown of the medical schools with which he had been associated.

**GUNSTER, Peter F.**, of Scranton, Pennsylvania, was born at Lockweiler, Germany, February 1, 1848. He received a scientific education at the Sheffield Scientific School, of Yale, and studied medicine at the Bellevue Hospital Medical College, where he graduated M. D., March, 1871. He settled in Scranton, but soon after visited Europe, where he spent two years. On returning he located in Wilkesbarre, but after a year's residence there, returned to Scranton, where he has been engaged for the past twenty years in an active and successful practice of general medicine. He is a member of the Luzerne County Medical Society, was elected its censor in January, 1876; was a delegate to the State Medical Society at Philadelphia in the same year. He has served on the medical staff of the Lackawanna Hospital, of Scranton, as Visiting and Consulting Physician to the same.

**HADDEN, Alexander**, of New York City, was educated at Union College, and received the degree of A. M. from that institution in 1856. He studied medicine at the College of Physicians and Surgeons, New York, and was graduated M. D. in 1859. He was House Physician to Bellevue Hospital in 1860, Physician to Nursery and Child's Hospital from 1862 until 1865, and Attending Physician to Presbyterian Hospital from 1872 until 1885. Dr. Hadden is an active member of the New York State and New York County Medical Societies, and Fellow of the American and New York Academies of Medicine, also a member of the New York Society for the Relief of Widows and Orphans of Medical Men, and the American Health Association. He was the founder of the Northeastern Dispensary, vice-president of its Board of Trustees, and Consulting Physician to that institution.

**HALL, Rufus B.**, of Cincinnati, Ohio, was educated in medicine at the Miami Medical College, from which institution he received the degree of M. D. in 1872. He is now Surgeon to the Cincinnati Free Surgical Hospital for Women; Clinical Lecturer on Gynecology in Miami Medical College; Fellow of the British Gynecological Association, London; Fellow of the American Association of Obstetricians and Gynecologists; also a member of the American Medical Association and the Ohio State Medical Society.

**HALLEY, George**, of Kansas City, Missouri, was graduated in medicine at the University of the Victoria College, Toronto, Ontario, in 1869. He is now Professor of Clinical Surgery in the University Medical College, of Kansas City, Missouri; proprietor of Halley's Surgical Hospital, and editor of the *Kansas City Medical Record*. Dr. Halley is an active member of the American Medical Association, Missouri State and Jackson County Medical Societies, and is also a member of the Kansas City Academy of Medicine and the Kansas State Medical Society.

**HAMLIN, Augustus Choate**, of Bangor,

Maine, of English ancestry and Norman descent, was born in Columbia, Maine, August 28, 1829. He was educated at Bowdoin College, from which institution he graduated in 1851, and studied medicine at the Harvard Medical College, graduating M. D. in 1854. He then settled in Bangor, where he has remained for the last forty years successfully engaged in general practice. During the war he was surgeon of a hospital for volunteers connected with the army of northern Virginia; Brigade-Surgeon under Fremont; Medical Director Eleventh Army Corps Army of the Potomac, and Medical Inspector United States Army during the campaign at Fort Wagner and of Nashville. He has been a member of the Maine Medical Association; of the Penobscot Medical Association; of the Royal Antiquarians of Northern Europe; of the Academy of Natural Sciences, Philadelphia; and Fellow of the American Association for the Advancement of Science. His contributions to medical literature consist of articles on "Alimentation," "Transfusion," "Transmission of Diseases," "Tetanus," and papers on other important subjects of medical interest. In 1878 he was Mayor of Bangor. He married in December, 1858, Helen A., daughter of Judge Jonas Cutting, of the Supreme bench of Maine.

**HAMMOND, Jabez Dean**, of Chicago, Illinois, son of Dr. C. H. Hammond, was born in Monroe county, New York, July 29, 1860. He descends from a line of physicians on his father's side, who were located in the vicinity of Rochester, New York. He received his classical education at the Geneseo State Normal School, the Rochester Free Academy, and the University of Rochester, New York. He then pursued his medical studies at New York, Boston, Ann Arbor, and Chicago, whence he graduated from Rush Medical College, in 1884. Since graduating he has taken supplementary courses abroad, at Paris and London. He has practiced at Chicago for the last ten years. He is a member of the principal medical and scientific societies of that city, and is House Physician at the Leland Hotel and Auditorium Annex. During the years of his practice he has devoted himself to the medical and surgical treatment of the nose and throat, for which he is chiefly known.

**HANDLY, James W.**, of Nashville, Tennessee, was graduated M. D. from the Medical Department of the University of Tennessee, Nashville, in 1887. He is now Demonstrator of Anatomy in that institution and Professor of Genito-Urinary Diseases in the Medical Department of the University of the South, Sewanee, Tennessee. Dr. Handley is secretary of the Nashville Academy of Medicine, and member of the Tennessee State Medical Society.

**HARGIS, Robert B. S.**, of Pensacola, Florida, was born in Hillsborough, North Carolina, June 7, 1818, and is of Scotch-Irish and Anglo-Saxon descent. He received his preliminary education at the University of North Carolina; studied medicine three years in Fayetteville, in the same State, under the preceptorship of Dr. T. J. Jordan, and was graduated with honors from the Medical College of Louisiana (now the Medical Department of Tulane University, New Orleans, La.), March 21, 1844. He located in Mobile, Alabama, in 1845, where he practiced one year; had a severe attack of malarial fever, which compelled him to repair to

the country to recuperate; sojourned at Mount Pleasant, Alabama; secured a large and remunerative practice; remained there five years; married in the meantime, his wife becoming in poor health, and removed on that account to Pensacola, Florida, in September, 1851. There he also obtained an excellent practice, and in 1852 was appointed Port Physician, which office he held for several years. Yellow fever having been introduced into Pensacola about August 1, 1853, his professional labors were thereby very largely increased. While busily engaged attending the sick, he was seized with the disease on the 25th of the same month, and was sent immediately by his friends to Milton, Florida, where his family were temporarily sojourning. Having recovered, and the yellow fever having been introduced there, by the earnest appeals of the

Robert B. S. Hargis.

citizens of Milton and adjacent villages, he resumed practice and continued until the epidemic ceased (on or about the 15th day of the following December). During the epidemic his diligence and kindly ministrations to the sick obtained for him a high reputation and the gratitude of the people. In May, 1854, an United States Marine Hospital was established in Pensacola, and he was appointed Surgeon of the same in June of the same year. He held that position until the secession of Florida from the Union, which took place in 1861, when the institution was necessarily suspended. He afterwards, in 1861, took service as a medical officer in that part of the Confederate States Army under Gen. Braxton Bragg, stationed at Fort Barrancas, Florida, and held a commission afterwards as Surgeon until the end of the war. He made himself conspicuous, unconsciously, for his kindly ministrations to the wounded prisoners of the enemy, and thereby won their lasting grati-

tude. He returned to Pensacola in 1865. In 1868, associated with Dr. J. C. Whiting, he established the Pensacola Hospital, now still in successful operation. In 1878 he became a member of the Florida Medical Association, and elected president thereof in April, 1882. He was elected a member of the American Public Health Association in 1878, and became one of the advising council in 1880. In 1881 he was appointed a member of the Board of Health of Escambia county, and was elected president thereof; resigning after two years' service. In 1882 yellow fever was again introduced into Pensacola, and he again distinguished himself by his untiring devotion to the sick. He was appointed by the National Board of Health to conduct the investigation of the yellow fever of that year with Dr. William Martin of the United States Navy. In 1883 yellow fever broke out at the Navy Yard, and at the earnest solicitation of the officers and men stationed there, he was appointed, by the Secretary of the Navy, to attend the sick at that post, which he did faithfully. Dr. Hargis was appointed Acting Assistant Surgeon to the United States Marine Hospital May 26, 1885, which office he still holds. He was appointed, by Governor E. A. Perry, to represent the State of Florida at the Gulf State Quarantine Convention, held in New Orleans, July 2, 1885. In 1889 he was appointed a member of the Board of Medical Examiners for the First Judicial District of Florida, and elected president, and still holds that position. His contributions to medical literature have been very extensive, and the following constitute the most important: "Medical Olla Podrida," 1857; "Communicability of Yellow Fever," *New Orleans Medical News and Hospital Gazette* for January, 1859; "Eclampsia in a Premipara, Embriotomy Recovery," *North American Medico-Chirurgical Review* for July, 1860; "Observations on Persistent Priapism with a Case Treated Successfully by the Bromide of potassium," *New Orleans Medical and Surgical Journal*, July, 1869; "The Muriated Tincture of Iron a Specific for Erysipelas," the *American Medical Bi-Weekly*, Louisville, Kentucky, March, 1877; "Contused Wound of the Perineum, Involving Urethra and Scrotum—Bladder Aspirated Every Day for Six Days—Septicemia—Recovery," the *American Medical Bi-Weekly*, April, 1879; "History and Origin of Yellow-Fever—Its Cause, Communicability and Prevention," read before the American Public Health Association, 1879, and published in Report and Papers of the American Public Health Association, 1880; "Report on Medical Topography, Climate, Diseases and Mortuary Statistics of Pensacola," the *National Board of Health Bulletin*, July, 1880. Letters to the *Sanitarian*, New York, on "The Nautical Origin of Yellow-Fever," January, 1880; "The Ship Origin of Yellow-Fever," *Gaillard's Journal* for June, 1880; "Yellow-Fever—Its Ship Origin and Prevention," a treatise published by D. G. Brinton, M. D., Philadelphia, 1880; "Sketches of the History of Quarantine at Pensacola, Florida," *National Board of Health Bulletin*, 1881; "Yellow-Fever Recognition and Isolation," read before the American Public Health Association, 1881, Reports and Papers of the American Public Health Association, 1881; "The Genius of Medicine," an address presented to the Florida Medical Association

April, 1882, published in the *New Orleans Medical and Surgical Journal* for July, 1882; "The Pensacola Yellow-Fever Epidemic of 1882," read before American Public Health Association, 1883, printed in the Reports and Papers of the American Public Health Association; on "Malaria and the Relations of Micro-Organisms to Diseases," read to the Florida Medical Association, *New Orleans Medical and Surgical Journal* for August, 1884; "The Natural History of Plagues," an address to the Florida Medical Association, 1887; "The Topical Application of the Oil of Turpentine to Recent Wounds, with Observations Relating to the Germ Theory of Diseases," *Philadelphia Medical News*, March, 1888. He has also contributed many other papers of more or less importance to different medical periodicals, as well as various articles from time to time that were published in the secular press on "Yellow-Fever Quarantine," "Public Hygiene," "City Sanitation," and subjects connected with the collateral sciences and general literature.

**HARISON, Beverley D.**, of Sault de Ste. Marie, Michigan, was educated at the University of Toronto, and the Toronto School of Medicine, and received the degree of M. D. from the latter institution in 1882. He is now Division Surgeon of the Duluth and Atlantic, and Memphis, St. Paul, and Sault de Ste. Marie Railway Companies; member of the National Association and Michigan Association of Railway Surgeons, Surgeon for the Hall and Munson Company, Bay Mills, Michigan; Medical Examiner and Advisor for the Canada Life Insurance Company, Union Mutual, Portland, Michigan Mutual, and Preferred Mutual Accident Associations, as well as several other leading life and accident insurance companies of the United States. Dr. Harison is also member and secretary of the Board of the Examining Surgeons for the United States Pension Bureau.

**HARLAN, George C.**, of Philadelphia was born in that city, January 28, 1835. He was educated at Delaware College, and studied medicine in the Medical Department of the University of Pennsylvania, whence he graduated in 1858, establishing himself immediately after in Philadelphia. During the war he was for a time medical officer on the gunboat Union, and for three years surgeon of the Eleventh Pennsylvania Cavalry. In 1866 he married Mary Holman, of Boston. His practice has been for several years confined to eye and ear surgery. He is a member of the Philadelphia College of Physicians, of the Philadelphia Pathological and County Medical Societies, and of the American Ophthalmological Society. His contributions to medical literature have been papers on "Simulated Amaurosis," "Neuroparalytic Ophthalmia," "Report on Inmates of Pennsylvania Institution for the Blind," "Pulsating Exophthalmus," "Hysterical Affections of the Eye," "Albuminuric Retinitis," "Strychnia in Atrophy of the Optic Nerve," and "Hemipopia and Decussation of the Optic Nerves," which, with several short articles, reviews and book notices, have appeared in the leading medical journals of his city and Transactions of the Philadelphia Pathological Society, the College of Physicians, of the American Ophthalmological Society and of the (Philadelphia) International Medical Congress. He was formerly Resident Physician at Wills' Hospital, St. Jo-

seph's Hospital, and Pennsylvania Hospital, and Attending Surgeon at St. Mary's Hospital. He has held for many years the position of Attending Surgeon at Wills' Hospital, and that of Ophthalmic and Aural Surgeon to the Children's Hospital.

**HARMON, Elijah D.**, of Chicago, Ill., was born in Bennington, Vermont, August 20, 1782, and died in the former city in 1869. He commenced the practice of medicine in Burlington, Vermont, in 1806; was married to Miss Welthyan Loomis in 1808; was a volunteer surgeon on board the Saratoga, commanded by Commodore McDonough during the celebrated naval battle near Plattsburg September 11, 1814, and after the close of the War of 1812 he returned to resume his practice in Burlington. In 1829 he determined to seek a new home in the West, and arrived at Fort Dearborn in May, 1830, and in the absence of Assistant Surgeon Finley he served as medical officer of the garrison, and also attended to private practice. His family followed him the next year, and took up their residence in a cabin of hewn logs. On July 10, 1832, a detachment of United States troops, designed to operate against the hostile tribes of Indians, arrived under the command of General Scott on board the steamer Sheldon Thompson. Unfortunately violent epidemic cholera had manifested itself among the soldiers the day previous to the arrival of the steamer and was rapidly spreading. The two companies of soldiers previously occupying the fort were isolated as far as practicable, and remained under the care of Dr. Harmon. The disease, however, spread so rapidly among the newly arrived troops that Fort Dearborn speedily became a crowded hospital for the sick and dying under the superintendency of Dr. De Camp, Assistant Surgeon, previously on duty at Madison Barracks. He had been assigned duty at Fort Dearborn by official order dated February 23, 1832, and he arrived at the fort with the Companies G and I of the Second Infantry under command of Major William Whistler, June 17, 1832, only twenty-three days before the arrival of the troops of General Scott, affected with cholera. On arrival of the latter the two companies, under Major Whistler, were sent into camp two miles distant for isolation from the cholera infection, and, as already stated, placed under the medical charge of Dr. Harmon, while Assistant Surgeons De Camp and Macomb devoted their attention most faithfully to the newly-arrived suffering troops in the fort. In one of his reports Dr. De Camp states that within one week after their arrival one-fifth of the whole force of one thousand men were admitted into the fort afflicted with the scourge. The epidemic, though severe, was of short duration, and the military forces in a few weeks resumed their campaign against the Indians, and Dr. De Camp left the fort during the following November. During the latter part of June and the first days of July, 1832, the hostile attitude of the Indians, led by Black Hawk, had caused many of the white settlers in Northern Illinois and Indiana to gather at Fort Dearborn for safety. But when it was known that the soldiers under General Scott had brought the epidemic cholera with them, not even the dread of the Indian tomahawk could deter them from fleeing from the scourge with the utmost precipitancy. The

few civilians who were obliged to remain found in Dr. Harmon a faithful physician and friend, for he extended his services to citizens and soldiers alike. He was the first medical man who had settled at the post to practice his profession without a government appointment, and he appears to have been fairly successful. In the winter of 1832 he performed the first important surgical operation at what is now the city of Chicago of which there is any record. "It consisted in the successful amputation of one foot and a part of the other for a half-breed Canadian whose feet had been frozen while carrying the mail on horseback from Green Bay to Chicago. According to a recent medical history of that city written by Dr. N. S. Davis, from which this sketch is mainly derived, we find that after the departure of Assistant Surgeon De Camp he was succeeded by Assistant Surgeon Philip Maxwell, who arrived at the fort February 3, 1833, and entered upon the performance of his duties. During the year 1832 Dr. Valentine A. Boyer, Edward S. Kimberly and John T. Temple became residents of Chicago, and these, with Dr. Harmon and Assistant Surgeon Maxwell, constituted the medical fraternity of Chicago at the time it became a corporated town, in August, 1833, with a total population of between one hundred and fifty and two hundred. Dr. Boyer, the last of these five pioneer physicians, remained a resident of Chicago nearly sixty years, and a short time ago was still living in that city. Besides his family residence Dr. Harmon pre-empted 140 acres of land located in what is now a central part of the south division of the metropolis, and one of the streets is still called Harmon Court in his honor. In 1834 he migrated to the State of Texas, and subsequently divided his time between that State and Chicago until his death.

**HARMON, Julian**, of Warren, Ohio, was born in that city, August 1, 1824. He was educated at the Western Reserve University, Cleveland, and received the degree of M. D. from the Medical Department of that institution in 1849. His medical training was supplemented by attending the schools and hospitals of New York City two years later. He settled in his native town, where he has since remained, engaged in an active and successful general practice of medicine. He has devoted special attention to diseases of children. For many years he was surgeon for several leading railroad companies in his State. In April, 1862, he was sent to the battle-field of Pittsburgh Landing, to take care of the soldiers from his section of Ohio. He was Trustee of the Northern Ohio Insane Asylum, from 1872 to 1874. He has taken much interest in educational affairs, and was for several years a member and secretary of the Board of Education of Warren. He has served as United States Examining Surgeon for the Pension Bureau for about twenty years, and as secretary of his county medical society for an equal length of time. He is ex-vice-president of the Northwestern Ohio Medical Association, and an active member of the Ohio State Medical Society. His contributions to medical literature consist of articles published in medical journals, and of cases reported to medical societies with which he is connected, having reference to his varied and extensive medical and surgical experience. Dr. Harmon is one of the oldest and most esteemed members of the medical

profession in Northeastern Ohio, having resided in his native city during his entire life, and practiced his profession there for forty-four years.

**HARPER, John E.**, of Chicago, Illinois, was educated in medicine at the University of the City of New York, from which institution he received the degree of M. D. in 1878. He is now president of the Clinical College of Medicine, Chicago, and Professor of Ophthalmology and Otology in that institution; Surgeon-in-Chief of the Eye and Ear Department

*J. E. Harper*

in the Specialty Hospital and the Wabash Avenue Dispensary, Professor of Ophthalmology and Otology in the Chicago Medical College, Oculist to Battle Creek (Michigan) Sanitarium and St. Vincent Orphan Asylum, Consulting Oculist to Oakwood Retreat, Lake Geneva, Wisconsin, and editor of the *Western Medical Reporter*. He is an active member of the Chicago Medical Society, and the Chicago Ophthalmological, Otological and Pathological Societies, and is also a member of the Mississippi Valley and the American Medical Association. Dr. Harper is an accomplished oculist and aurist, and his medical and surgical skill in his special field of practice is widely known.

**HART, Benjamin Franklin**, of Marietta, Ohio, was born in Watertown, in the same State, January 5, 1823. He is of English ancestry, and a son of Deacon Benjamin Hart, of Weathersfield, Connecticut. Under stress of extreme poverty, he gained his education by sheer force of will, and after two terms at the Ohio Medical College, Cincinnati, entered upon practice at Marietta in 1844. Twenty years later, having meanwhile successfully conducted a practice of constantly increasing extent, he entered Bellevue Hospital Medical College and graduated M. D. in March, 1864. In 1862 he was appointed by the Sanitary Commission of Washington county to visit battle-fields and

hospitals for the purpose of ministering to the needs of wounded or sick Ohio soldiers, a duty that he most satisfactorily discharged without compensation. He was appointed surgeon, with the relative rank of major, by Governor Brough, of Ohio, in 1864. He was elected a member of the Ohio State Medical Society in 1854, of the American Medical Association in 1872, and in 1876 was a delegate to the International Medical Congress at Philadelphia; has served as Censor of the Columbus Medical College, as City Physician of Marietta, as a member of the Marietta Board of Health, and as a member of the Harmar Board of Education and city councils. Dr. Hart is one of the oldest and most widely known physicians in his city and section of the State, having been established there in the general practice of his profession almost a half century.

**HATCHETT, Buchanan**, of Fort Smith, Arkansas, was graduated M. D. from the Medical Department of Vanderbilt University, Nashville, Tennessee, in 1882. His medical education and training were supplemented by attending the Medical Department of Tulane University, New Orleans, in 1885, New York Polyclinic in 1889, and Vienna and Heidelberg, Universities in 1890. Dr. Hatchett is now engaged in an extensive and successful practice of general medicine and surgery. He is a member of Sebastian County Medical Society, Arkansas State Medical Society, American Medical Association, American Public Health Association, and the National Association of Railway Surgeons.

**HAWKES, William H.**, of Washington City, D. C., was born in Meriden, Connecticut, October 25, 1845, and was graduated M. D. at the University of Pennsylvania, Philadelphia, in 1874. He was appointed Acting Assistant Surgeon United States Army, in 1881, and served as assistant to the attending surgeon United States Army at Washington, D. C., and as examiner of recruits at the rendezvous in that city. He is now Professor of *Materia Medica* and Therapeutics and Clinical Professor of Diseases of Children in the Medical Department of the University of Georgetown, Consulting Physician to Providence Hospital, secretary of the attending staff and Director of Clinic of Children's Diseases in Emergency Hospital. Dr. Hawkes has also served as Attending Physician to Garfield Memorial Hospital and Providence Hospital. He is a member of numerous local and national medical organizations.

**HAWKINS, Thomas Hay**, of Denver, Colorado, was graduated M. D. at Bellevue Hospital Medical College, New York, in 1873. He is now president of the Faculty of the Gross Medical College, Denver, and Professor of Gynecology, Abdominal Surgery and Clinical Midwifery in that institution. He is also editor of the *Denver Medical Times*, and a member of the American Medical Association, American Association of Obstetricians and Gynecologists, Western Association of Obstetricians and Gynecologists, Colorado State Medical Society, ex-president of Denver Medical Association, and Arapahoe County Medical Society, and also ex-president of the Denver Obstetrical and Gynecological Society.

**HAWLY, Donly C.**, of Burlington, Vermont, was educated in medicine at the University of Vermont, from which institution he received the degree of M. D. in 1884. He is now At-

tending Surgeon to Mary Fletcher Hospital, and Attending Physician to the Home of Destitute Children, Burlington; secretary of the Local Board of United States Examining Surgeons for the Pension Bureau; secretary of the Vermont State Medical Society, and a member of the American Medical Association. Dr. Hawly has made some important contributions to professional literature, notably an article on "Heart Sounds and Cardiac Murmurs," published in the *Journal of the American Medical Association*.

**HAYS, Franklin W.**, of Indianapolis, Indiana, was born at Eldorado, Ohio, April 2, 1858. His ancestry on his father's side made a part of the sturdy pioneers of Georgia and Tennessee, where they became largely identified with the interests of these States, representing them both in times of peace and of

*Franklin W. Hays*

war, with in many instances signal ability, and in the War of the Rebellion achieved distinction on both sides of the conflict. His father, James C. Hays, Esq., was a merchant, and born of the old Southern pioneer line. His mother was formerly Sarah J. Clevenger, and descends from Scotch-Irish Presbyterian stock, dating back in this country to colonial days, and numbers among her blood kin many persons who attained distinction as soldiers in the War of the Revolution, and since then in the various professions, notable among them in late years Shobal Clevenger, the well-known American sculptor, whose labors and genius have made him a name on both sides of the Atlantic. The parents of Dr. Hays removed from Ohio to Indiana, and resided during his childhood in Columbus, where he lived up to his eighteenth year, and where he acquired in the High School of that city the basis of a sound education. He then became a student in the Kentucky University at Lexington,

where, in the carrying forward of the general curriculum, he gave special attention to the study of literature and the natural sciences. Upon the completion of his collegiate course in the university he commenced the study of medicine under the preceptorship of Dr. Grove, of Columbus, and later with Drs. Howard and Martin, of Greenfield, Indiana, after which he went to Indianapolis and pursued his studies until his graduation, with Drs. Patrick H. and Henry Jameson, of that city. He entered the Medical College of Indiana, and was graduated with distinction from that institution in 1880. While still an under-graduate in this school, he was elected an assistant to the chair of Chemistry and Toxicology. After receiving his medical degree he continued in this position, and to its duties were added that of Librarian and Registrar, which places he filled until 1883, when he received the appointment of Lecturer on Dermatology and Venereal Diseases, and was at the same time made Superintendent of Bobb's Free Dispensary. In the interval before his advancement, and prior to his acceptance of the lectureship mentioned above, he took a post-graduate course in the Medical Department of the University of Pennsylvania, and trained himself further for the duties of his profession, in the hospitals of New York and Philadelphia. His valuable labors and close connection with his *Alma Mater* made him a leading spirit in the reorganization which resulted in the establishment of the Medical College of Indiana as one of the foremost schools of the West devoted to instruction for the practice of medicine and surgery, and the general advancement of medical learning. Three years later Dr. Hays was elected to a Professorship in the Faculty, taking the chair of *Materia Medica*, Therapeutics and Dermatology, and was made secretary of the college, which positions he has filled with credit and ability. He has been honored by the Alumni Association of the College by being elected several successive terms as secretary, and also president of the same. Dr. Hays, although still a young man, is among the prominent physicians of his city, and is an active and valued member of the Marion County and Indiana State Medical Societies, and also of the American Medical Association. He is now a member of the Consulting Staff of the City Dispensary, the City Hospital and St. Vincent Hospital, and was for several years Attending Physician to the latter institution. In October, 1893, he was appointed by the Hon. Caleb S. Denny, Mayor of Indianapolis, a member of the City Board of Health, and was soon after elected president of that organization. In addition to these duties Dr. Hays is engaged in a very large general practice in his city, as well as much consultation practice in Indiana and adjoining States. Nothing less than superior, systematic, executive capacity, supplemented by a vigorous physical constitution, could serve to push through his large and constantly growing business. Still he manages to find time for social duties, and enjoys a large and enduring popularity among his society and club friends. He is an active Mason of high standing, a member of many of its orders and the Scottish Rite. He is also a member of the Mystic Shrine and other fraternal societies, as well as of the commercial and social clubs

of his city. Dr. Hays leaves nothing undone to keep abreast of his profession, and with this object in view, usually makes a yearly tour of the Eastern hospitals, and has visited those of Europe. In the city of his adoption he is held in high esteem as a public-spirited citizen who is always ready to lend his aid to her charities and enterprises in any manner that may benefit or further the interest of her people. On June 25, 1884, Dr. Hays was married to Miss Luella G. White, daughter of the late Thomas White, Esq., of Memphis, Tennessee, well known as banker and owner of extensive plantations. His accomplished wife and two interesting sons complete the family circle of his happy home.

**HAYWOOD, Edmund Burke**, of Raleigh, North Carolina, was born in that city January 13, 1825. He is of English ancestry, and was educated at the University of North Carolina, and studied medicine at the University of Pennsylvania, whence he graduated M. D. in 1849, settling in Raleigh in active practice. In 1861 he was appointed Surgeon of North Carolina Troops, and also in the same year President of the Board of Surgeons to examine surgeons for the same; also in the same year Surgeon in the Confederate States Army and placed in charge of Confederate States Hospitals at Raleigh and in Richmond from 1862 until 1865. He was also appointed Acting Medical Director of the Confederate States Army for the Department of North Carolina, and President of the Board of Surgeons to grant discharges from the same army. During his professional career he has successfully performed ligation of the right external iliac artery, 1869; the cesarean operation, 1874; and has operated for strangulated inguinal hernia, and cancerous tumors of the breast. He was elected a member of the Medical Society of North Carolina in 1850, was its Vice-President in 1866, and its President in 1868, and one of its Board of Censors in 1873; has frequently been a delegate to the American Medical Association, and was a delegate to the International Medical Congress, 1876, and again in 1887. He aided in the organization of the Raleigh Academy of Medicine, in 1870, and was elected its President in 1874; he was also elected a Corresponding Member of the Gynecological Society of Boston in 1873. He is the author among other articles of a report of a successful case of "Ligation of Femoral Artery," and of various other reports of successfully performed important cases in the Transactions of the Medical Society of North Carolina, such as amputations of thigh, craniotomy, vesico-vaginal fistula, and tracheotomy. He has been for many years a member of the Board of Medical Examiners of North Carolina, and in 1866 held the chair of Surgery therein, and in 1873 was appointed by the same board to examine and license druggists. He was Medical Director of the North Carolina Life Insurance Company in 1873, and a member of the Board of Directors of the Insane Asylum of North Carolina in 1865, and has held the position of its President for several years. He is State Medical Referee for the Mutual Benefit Life Insurance Company of Newark, New Jersey, and Manhattan Life Insurance Company of New York, and is Chief Medical Examiner and Advisor for several other leading life assurance companies of this country. In 1889 the University of North Carolina conferred upon Dr. Haywood the de-

gree of LL. D. in recognition of his eminent professional attainments.

**HEDDENS, James Weir**, of St. Joseph, Missouri, was born in Barboursville, Kentucky, in 1857. He was the son of the late Dr. W. I. Heddens, a leading physician of St. Joseph, and was reared in that city, his father having moved there from Kentucky, when he was two years of age. He received his literary education in the public and high schools of St. Joseph, and his medical education at Jefferson Medical College, Philadelphia, Pa., where he graduated as the prize student in anatomy in 1879. He was a private student of Prof. Pancoast, and served a term in the hospital, to which he was Visiting Surgeon after his graduation. He commenced the practice of medicine and surgery at the expiration of his hospital service in 1880, in partnership with his father. The Medical College of St. Joseph was organized at this time, and he was selected to

*James Weir Heddens*

the Professorship of the chair of Anatomy. This position he efficiently filled until 1891, when he accepted the chair of Operative Surgery and Gynecology in the Ensworth Hospital Medical College. He is also one of the life trustees of the Ensworth Hospital and College. Dr. Heddens is a man of exceptional natural ability, and this, coupled with his high educational advantages, attainments, assiduous application and close observation, soon brought him into prominence in his profession, especially in surgery, for which he possessed superior skill. His special work in the operation for the radical cure of hernia merits him special commendation. He further equipped himself in his profession by a tour of the European hospitals, during which he gave especial attention to surgery. He has performed all the capital operations, and unusual success has attended his work in this field of medicine, and although a young man, he has made for himself a reputation as one of the

leading surgeons in the State of Missouri. He has been a member of the Board of Managers of the Missouri State Lunatic Asylum, No. 2, for the past seven years, and is now president of that board. He attended as a delegate member the British Medical Association, which met in Edinburgh, Scotland, in 1880; is a member of the American Medical Association, and of the Medical Association of the State of Missouri, and has served as president of the District Medical Society of Northwest Missouri. Dr. Heddens is one of the proprietors and editors of the *St. Joseph Medical Herald*. He is a Royal Arch Mason, and member of the Knights of Pythias.

**HEDDENS, William I.**, of St. Joseph, Missouri, was born in Preble county, Ohio, February 14, 1828, and died July 3, 1891. He was a graduate of the Jefferson Medical College, and began his practice in Kentucky. When three years had expired he removed to St. Joseph, where he engaged in practice until his death. His record as an enterprising citizen and prominent professional man is one which sheds luster upon his life and character. He was a member of the International Medical Congress, the American Medical Association, of which he served as vice-president; was president of the Northwestern Missouri Medical Association, and was also president of the St. Joseph and District Medical Society. He secured a large practice and amassed a handsome fortune. He was the editor and owner of the first medical journal published west of St. Louis. In 1879 he organized the Faculty of the College of Physicians and Surgeons in his city, of which, during its entire existence, he was president and dean. After its consolidation with the St. Joseph Hospital Medical College, he was still the president. Two years later he organized from this school the Faculty of the Ensworth Medical College and Hospital, and he was made president of the Board of Trustees and Dean of the Faculty, continuing as such until his death. It is known to many of the citizens of St. Joseph that it was due almost entirely to the influence of Dr. Heddens that the late Samuel Ensworth donated the principal of his large estate to the erection and endowment of the Ensworth Medical College and Hospital, at the corner of Seventh and Jule streets, which is recognized as one of the most important institutions of the kind in the Northwest. For thirty or more years he was a conspicuous figure in the social and professional life of St. Joseph, and no citizen ever passed away more deeply honored and regretted. Fraternaly, he was a Royal Arch Mason and a member of the Independent Order of Odd Fellows.

**HEISE, A. W.**, of Joliet, Illinois, was born in Bramsche, Hanover, in 1823, and died October 22, 1893. His education was received in the universities of Germany. He was House Surgeon in the Marine Hospital, Chicago, in 1857. He served in the army as Surgeon of the Twentieth Illinois Regiment, and on the last call as Surgeon of the One Hundredth. After Murfreesboro he was appointed Brigade Surgeon. After Chickamauga he was appointed Operator of the brigade and then Inspector of Hospitals and Consulting Surgeon of the corps. In 1872 he was appointed Prison Physician at Joliet, holding the position many years. Dr. Heise was one of the oldest and best known members of the medical

profession in the State of Illinois. He left a wife and son, with a large estate.

**HELLER, Peter H.**, of Pueblo, Colorado, was graduated M. D. from the Medical Department of the University of Georgetown, District of Columbia, in 1874. His medical education and training were supplemented by attendance at the schools and hospitals of Vienna in 1877, and of Paris in 1878. He is now Visiting Physician to St. Mary's Hospital and member of the Staff of Physicians to the Woman's Hospital, Pueblo. Dr. Heller is an active member of the Colorado State Medical Society, and Ex-President of the Pueblo County-Medical Society.

**HENEMAN, Henry N.**, of New York City, was graduated M. D. at the College of Physicians and Surgeons, New York, in 1874. He is now Visiting Physician to Mount Sinai Hospital and Professor of Practice of Medicine in the New York Polyclinic. He is an active member of the New York Academy of Medicine; New York Academy of Sciences; New York County Medical Society; New York Pathological Society, and the New York Neurological Society.

**HENNING, Bennett G.**, of Memphis, Tennessee, was graduated M. D. at Bellevue Hospital Medical College, New York City, in 1870. He is now Professor of *Materia Medica* and Clinical Diseases of the Rectum in the Memphis Hospital Medical College, president of the Medical Staff of St. Joseph's Hospital, and proprietor of Henning's Infirmary for Rectal Diseases. He is a member of the American Medical Association, Tennessee State Medical Society, Memphis Medical Society, and the Tri-State Medical Society of Tennessee, Georgia, and Alabama.

**HENRY, Joseph N.**, of New York City, was educated in medicine at the University of Vermont, and received the degree of M. D. from the Medical Department of that institution in 1883. He is now assistant to the chair of Dermatology in Bellevue Hospital Medical College; also Lecturer on Dermatology and Syphilology at the spring term in that institution. He is Consulting Surgeon to the hospitals of the Board of Health, member of the New York County Medical Association, and West End Medical Society.

**HENRY, Morris H.**, of New York City, was born in London, England, July 26, 1835. He was educated in that metropolis; in arts at Somerset House; subsequently in Belgium, and in the University of Vermont; graduated in medicine from the last-named institution in 1860, and received the honorary degree of A. M. 1875. He settled in New York. During the War of the Rebellion he served as Assistant Surgeon in the United States Navy, and was with Farragut in the Mississippi, at New Orleans. He is a member of the New York Academy of Medicine, Medical Society of the County of New York, American Medical Association; president of the Alumni Association of the University of Vermont; honorary secretary for New York of the Anthropological Society of London, and was for many years Surgeon to the New York and Northern Dispensaries of New York. His contributions to medical literature consist of "Improvement in the Method of Examining Throat, Ear and Eye by Plano-Convex Lens with Reflector," *American Medical Times*, 1864. He was the originator and editor of the *American Journal*

of *Syphilography and Dermatology*, devoted to the consideration of all venereal and skin diseases, and was editor of the American edition of Dr. Tilbury Fox's work on "Skin Diseases" (adopted by the United States Government for the use of surgeons in the army; "Monographs on the Indications for Operative Surgery in Cases of Phimosis," 1870; on "Amputation of Redundant Scrotum, in the Treatment of Varicocele, with New Instrument," on "Three Cases of Psoriasis, Occurring During Lactation," "A Case of Seborrhoea Sicca," 1871; "Treatment of Venereal Diseases in Vienna Hospital," "On the Dementia and Hemiplegia of Syphilis," 1872; "Cases of Induration of Os and Cervix Uteri, the Result of Syphilis," "Of Syphilitic Insanity," "Of Anomalous Localities of Chancres," "New Instrument to Remove Prepuce in Cases of Phimosis," 1874, and "Specialists and Specialties in Medicine," address before the Alumni Association of the University of Vermont, June, 1876; also numerous other articles of great medical interest. He succeeded Dr. Carnochan as Surgeon-in-chief of the State Emigrant Hospital, Ward's Island, in 1872, and has served as Consulting Surgeon to the Department of Municipal Police of New York.

**HENRY, William G.**, of Detroit, Michigan, was graduated M. D. at the McGill University, Montreal, in 1883, and became a licentiate of the Royal College of Physicians, London, England, and also of the College of Physicians and Surgeons, Ontario, in 1885. He is a member of the Michigan State and Wayne County Medical Societies, and also of the Detroit Medical and Library Association.

**HEPBURN, Neil J.**, of New York City, was graduated M. D. at the College of Physicians and Surgeons, New York in 1868. He is now Ophthalmologist to Randall's Island Hospital, and president of the Medical Board of that institution. He is also Lecturer on Ophthalmology in the New York Polyclinic, and Assistant Surgeon to the Manhattan Eye and Ear Hospital. Dr. Hepburn is a member of the New York Academy of Medicine, New York County Medical Society, New York Neurological Society, American Otological Society, and the American Ophthalmological Society.

**HERRICK, Everett**, of New York City, was graduated M. D. at the Jefferson Medical College, Philadelphia, in 1854. He is now Consulting Physician to the New York Institution for the Deaf and Dumb; President of the Society for the Relief of Widows and Orphans of Medical Men; Fellow, and Chairman of the Board of Trustees of the New York Academy of Medicine; member of the New York County Medical Society, and Trustee of the New York Skin and Cancer Hospital.

**HERRICK, Henry J.**, of Cleveland, Ohio, was born, January 20, 1833, in Portage county, in the same State. He prepared for college at the Twinsburg Institute, Ohio, graduated at Williams' College, Massachusetts, in 1858; and pursued his medical studies at Rush Medical College, Chicago, from which he graduated in 1861. He settled at once in Cleveland. His practice includes a number of important operations successfully performed. He is a member of the Ohio State Medical Society, of which he was president in 1874. His contributions to medicine consist of reports of cases, and a paper on the "Relation of Science to the Art of Medicine." During the Civil War he

was Assistant Surgeon and Surgeon for three years, serving actively in the field with the army of the Cumberland, and being for several months a prisoner at Libby. In 1865 he was appointed Professor of Obstetrics and Diseases of Women and Children in the Charity Hospital Medical College (since incorporated under the name of the Medical Department of the University of Wooster), filling the chair for four years; when he was appointed Professor of the Principles of Surgery in the same institution. Dr. Herrick is an accomplished physician and surgeon as well as a distinguished medical teacher, and is now one of the oldest and most widely-known members of the profession in the city of Cleveland.

**HEYDECKER, Henry R.**, of New York City, was educated at Harvard, receiving the degree of A. M. in 1886, and that of M. D. from the same institution in 1889. His medical training was supplemented by attendance at the Charity and Maternity Hospitals, New York, in 1891. He is now Instructor in Genito-Urinary and Venereal Diseases at the New York Post-Graduate Medical School and Hospital, and Physician for Children's Diseases to DeWitt Dispensary. Dr. Heydecker is a member of the New York Academy of Medicine, New York County Medical Society, Society of the Alumni Charity Hospital, and Harvard Medical Society of New York.

**HILLS, T. Morton**, of Willimantic, Connecticut, was graduated M. D. from the Medical Department of Yale College, in 1863. He now devotes special attention to surgery and gynecology, and has, in connection with his office, a private hospital for the treatment of surgical and gynecological cases, in which field of practice he has excellent success, and is widely known as a skillful and accomplished member of his profession. Dr. Hills is a member of the Windham County and Connecticut State Medical Societies, and of the American Medical Association.

**HIMES, Isaac N.**, of Cleveland, Ohio, was born at Shippensburg, Cumberland county, Pennsylvania, December 4, 1834. He was educated in Jefferson College, Cannonsburg, Pennsylvania, graduating at that college in 1853; he attended lectures in the Medical Department of the University of Pennsylvania; subsequently entered the College of Physicians and Surgeons, New York, and from the last-named institution received in 1856 his degree of M. D. During the ensuing eighteen months he was a member of the house staff of Bellevue Hospital; was appointed in 1860 Assistant Resident Physician of the Nursery Hospital on Randall's Island, serving one year in that capacity, and in the spring of 1861 established himself in private practice at Chillicothe, Ohio. In the fall of the same year he was appointed Assistant Surgeon of the Seventy-third Regiment Ohio Volunteers; was in a short time promoted to be surgeon to the same regiment, and in the latter capacity served until the close of the Civil War. He then spent two years in professional study in Germany and France, several months in travel in the United States, and in attention to private interests, residing a year in San Francisco, California, and in 1871 finally established himself in practice in Cleveland. He has been one of the Visiting Board of Cleveland City Hospital, and is a member of the Cuyahoga County Medical Society, Ohio State Medical Society, and American Medical

Association. In 1863 he was chosen Professor of Anatomy in Cleveland Medical College, and in 1871 was appointed Professor of Physiology and Physiological and Pathological Histology in the same institution. The latter chair he filled for several years.

**HITCHCOCK, Charles W.**, of Detroit, Michigan, was graduated A. M. at the University of Michigan, Ann Arbor, in 1880. He studied medicine at the Detroit Medical College and was graduated M. D. from that institution in 1885, since which he has been successfully engaged in the general practice of his profession. He is now secretary of the Michigan State Medical Society, and is a member of the American Academy of Medicine and the Detroit Medical and Library Association. He is Chief Surgeon of the Standard Life and Accident Insurance Company, and is a well-known and accomplished physician.

**HOLDEN, Edgar**, of Newark, New Jersey, was born at Hingham, Massachusetts, November 3, 1838, and is of New England parentage. Having graduated from Princeton College in 1859, he entered the College of Physicians and Surgeons, New York, and received his medical degree in 1861. In the same year he entered the United States Navy, ranking three in a class of sixty-one, and was commissioned assistant surgeon. In 1862 he was surgeon of the frigate *Minnesota* at the engagement with the *Merrimac*; was one year surgeon of the monitor *Passaic* (his illustrated journal detailing her terrible experience off Hatteras, when the first monitor went down, having been published in *Harper's Magazine*). He took part in the siege of Charleston, in the engagement with the ram *Albermarle*, and served until the latter part of 1864, when he resigned and entered the volunteer army, serving until the end of the Civil War. He then established himself in Newark. He pursued the study of his profession in Europe in the winter of 1870. Dr. Holden is a member of the New Jersey State Medical Society, of the New Jersey Academy of Medicine, of the New York Laryngological Society, of the New York Society for the Advancement of Science, and of the American Medical Association. Of his more important professional publications may be mentioned the following articles, which have appeared in the *American Journal of Medical Sciences*, the *New York Medical Record*, and the *New York Medical Journal*: "Loss of the Entire Scapula from Sloughing," "Diseases of Men of War," 1866; "Vaginal and Vulvar Varices," 1867; "Relation of Cancer and Tubercle," 1868; "Relation of Cardiac Pathology to the Sphygmograph," Transactions New Jersey State Society, "Ostracism for Consumption," 1871; "Successful Treatment of Asthma," 1872; "The Sphygmograph," a prize essay, New York College of Physicians and Surgeons, 1873; "Anomalies of Cardiac Pathology," 1875; "Extraordinary Case of Intra-Cardiac Cyst," "A Discovery in Physical Diagnosis," "Unison Resonance in Auscultation," "New Instruments for Detection and Prevention of Pulmonary Disease," 1876; "Reflex Pharyngeal Neuroses due to Uterine Disease," "New Investigations in Respiratory Pathology," 1877. Also various contributions to current periodical literature. Since 1869 he has been president of the Medical Department of the Mutual Benefit Life Insurance Company. In 1874 he was appointed Consulting Surgeon to St. Barnabas Hospital of Newark,

and in 1876 was a member of the executive committee of the International Medical Congress, Philadelphia. Dr. Holden has served as Clinical Physician for Diseases of the Throat to St. Michael's Hospital, in the city where he resides, and is a member of the American Laryngological Association.

**HOLLISTER, John H.**, of Chicago, Illinois, was born in Monroe county, New York, August 5, 1824. During his infancy the family moved to Romeo, Macomb county, Michigan. At the age of fourteen years he returned to Rochester, New York, and received his general education in the Rochester Collegiate Institute, after which he took a course in the normal department of the institution, preparatory to teaching. He was engaged chiefly in teaching the following four or five years, and in January, 1844, he commenced the study of medicine, graduating from the Berkshire Medical College in 1847. Immediately after receiving his degree of Doctor of Medicine he commenced general practice in Grand Rapids, Michigan, where he quickly acquired an extensive professional business and an excellent reputation. In 1855 he removed to Chicago, a more desirable field for professional work, and in 1857 was appointed Demonstrator of Anatomy in Rush Medical College, and discharged the duties of that position satisfactorily until the summer of 1859, when he resigned and accepted the chair of Anatomy in the Faculty just organized for the medical department of Lind University. After successfully teaching anatomy four years he accepted a transfer to the chair of Physiology, the duties of which he discharged with increasing reputation until 1867, when he was again transferred to the chair of General Pathology and Pathological Anatomy. The duties of this chair he discharged with fidelity until 1882, when he resigned it, but retained the Professorship of Clinical Medicine, and still continues to give regular clinics in the medical wards of the Mercy Hospital. He early became a member of the American Medical Association, was chairman on the Section of Practical Medicine in 1883, and has since served as a member of the Board of Trustees for the publication of the journal of the Association, and otherwise taken an active part in the proceedings of that organization. He served the Illinois State Medical Society as treasurer fourteen consecutive years, and as its president in 1874. He is an earnest supporter of the Chicago Medical Society and has been honored with its highest offices, and is a member of other scientific and literary associations. Dr. Hollister is a leading member of the Plymouth Congregational Church, and in every relation of life exhibits the highest type of a Christian gentleman.

**HOLLOWAY, James M.**, of Louisville, Kentucky, was born at Lexington, in the same State, July 14, 1834. He acquired his literary education at Oakland College, Mississippi, and Center College, Danville, Kentucky; subsequently preparing himself for professional life in the Medical Department University of Louisiana (New Orleans). He graduated in medicine in 1857, and was the valedictorian of his class. In the same year he established himself at Vernon, Mississippi. From 1861 to 1865 he was Surgeon in the Confederate States Army. He served with the Eighteenth Mississippi Regiment, and was present at the battles of Manassas and Ball's Bluff. After

serving on the Peninsula until May, 1862, he was ordered, on account of sickness, to Richmond, Virginia, where he organized military hospitals. In 1863 he held the position of senior medical officer, and was appointed president of the Medical Examining Board for all hospitals in Richmond. At the close of the war he established himself in Louisville, where he has since remained engaged in an active and successful practice of general medicine and surgery. He is a member of the Medico-Chirurgical Society, of the Academy of Medicine, Louisville; of the Kentucky State Medical Society, and the American Medical Association. He has also served as a member of the Kentucky State Board of Medical Examiners, as Commissioner of Central Kentucky Lunatic Asylum, member of the Medical and Surgical staff of Louisville City Hospital, and as member of the Board of Health, Louisville, Ky. In 1865 he was Professor of Anatomy in the Medical Department of the University of Louisville; in 1866 Professor of Physiology in the same college; from 1867 until 1870 he was Professor of Physiology and Medical Jurisprudence in Kentucky School of Medicine; from 1870 to 1874 Professor of Physiology and Clinical Surgery in the Louisville Medical College, and in 1874 he became Professor of General and Clinical Surgery in Hospital College of Medicine, Medical Department of Central University, Kentucky, and has also held this chair several years. His contributions to medical literature consist of articles on the treatment of hemorrhage from large arteries, styptics and compression, articles on amputations of foot and excision of ankle-joint, and numerous other papers on surgical subjects in leading medical journals.

**HOLMES, C. R.**, of Cincinnati, Ohio, was graduated in medicine at the Miami Medical College, Cincinnati, in 1886. He is now Ophthalmic and Aural Surgeon to the Cincinnati Hospital; Professor of Ophthalmology in the Presbyterian Hospital and Women's Medical College, and Clinical Lecturer on Diseases of the Eye in Miami Medical College.

**HOLMES, Horatio R.**, of Portland, Oregon, was educated in medicine at Long Island College Hospital, Brooklyn, New York, from which institution he received the degree of M. D. in 1880, and also obtained an *ad eundem* degree from the Medical Department of Willamette University, Portland, Oregon, in 1887. He is now Professor of Gynecology in the latter institution. Dr. Holmes is an active member of the Portland Medical Society, Oregon State Medical Society, British Medical Society, American Medical Association, and of numerous other medical organizations.

**HORN, Thomas G.**, of Colorado Springs, Colorado, was born in Martinsburg, Berkeley county, Virginia (now West Virginia), September 5, 1832, and was educated at private schools in that State. He entered the United States military service in 1861, but having been taken prisoner in November, 1862, and confined eight months in the South, he lost his health, so that he was unable to return to the regular service, although he managed to perform the duties of a contract surgeon at different forts in the West. He studied his profession at the St. Louis Medical College and the Missouri Medical College, graduating from the former in 1868, and receiving from the latter an honorary degree in 1872. In 1874

he settled in Junction City, Kansas, where he remained until the spring of 1875, when he removed to his present residence. He is a member of the American Medical Association, El Paso County Medical Society, Davis County Medical Society, of which he is ex-secretary; of the State Medical Society of Colorado, of which he is ex-president; and of the State Board of Health. He has also been for many years Trustee of Denver University. He is Assistant Surgeon of the Union Pacific railway System; Lieutenant-Colonel and Assistant Surgeon General Patriarchs' Militant. He is the author of several contributions to the Leavenworth *Medical Herald*; of various papers read before medical associations; and of a work entitled "Mineral Springs of Colorado." At different times he has been a member of the school board. He has been a steadfast worker in the cause of temperance, and is a member of the Methodist Episcopal Conference, before which, December 13, 1876, he read a paper on "The Class Leader and his Work," which was well received by that body and the public.

**HOWE, James Lewis**, of Louisville, Kentucky, was born in Newburyport, Massachusetts, August 4, 1859, and is of full Puritan descent. He was educated in public schools; graduated at Brown High School, 1875; A. B. of Amherst College, 1880; studied at University of Göttingen and University of Berlin; Ph. D. and A. M. of University of Göttingen, 1882; M. D. (honorary), Hospital College of Medicine, Louisville, 1886. He was chosen in 1883 Professor of Chemistry in Central University, Richmond, Kentucky; Professor of Medical Chemistry and Toxicology in Hospital College of Medicine in 1887, and Professor of Chemistry and Metallurgy in Louisville College of Dentistry, during the same year. He has been Dean of Hospital College of Medicine and of Louisville College of Dentistry since 1888. Dr. Howe has been Scientist and Lecturer to the Polytechnic Society of Kentucky since 1887, and has made occasional contributions to medical, chemical and other scientific journals.

**HOWLAND, Henry H.**, of Denver, Colorado, was educated in medicine at the University of the City of New York, from which institution he received the degree of M. D. in 1878. He is now Professor of Laryngology and Rhinology in the Medical Department of the University of Denver. Dr. Howland is a member of the Colorado State Medical Society, and is ex-president of the Denver Medical Association and Arapahoe County Medical Society.

**HUBBARD, William Ward**, of Perth Amboy, New Jersey, was born at Elyria, Ohio, March 25, 1836. His father, the late Eber Ward Hubbard, M. D., who died in May, 1872, at Tuttenville, Staten Island, New York, was for three sessions a member of the Ohio Legislature, and for one session a member of the New York Legislature. During the late Civil War the subject of this sketch was hospital steward in the Confederate States army, and was actively engaged on field and hospital duty. His literary education was acquired at the High School in his native place, and at Chase's Institute, Middletown, Connecticut. He received his medical training at Bellevue Hospital Medical College, New York, graduating from that institution March 1, 1873. He subsequently entered upon the practice of his profession at Perth Amboy, where he has since remained engaged in an active and successful

practice of general medicine. He is a member of the Middlesex County Medical Society, and in 1874 became Physician and Health Officer to his city, a position he has held for several years.

**HUDSON, William Miller**, of Hartford, Connecticut, was born in that city March 14, 1833. He graduated at Yale College in 1853, and in 1855 received the degree of M. D. from the Jefferson Medical College, Philadelphia, Pennsylvania. In May, 1858, he married Miss Ellen H. Bryan, of that city. He settled first in New York City, where he remained until the breaking out of the War of the Rebellion, when he entered the United States Army as Acting Assistant Surgeon, in which position he served three years. He is a member of the Hartford City Medical Society, and of the Connecticut State Medical Association. He has served as Commissioner of Fisheries for the State of Connecticut; has been Medical Advisor of the Connecticut General Life Insurance Company; and subsequently of the Continental Life Insurance Company of Hartford, Connecticut.

**HUNTER, Alexander S.**, of New York City, was educated in medicine at the University of the City of New York, from which institution he received the degree of M. D. in 1863. He is now Chairman of the Board of Censors of the Medical Society of the County of New York, and ex-President of that organization. He is also ex-President of the Obstetric Section of the New York Academy of Medicine, and New York Medical Union; member of the New York State Medical Society, and of numerous other local medical societies, among which may be mentioned the Pathological, Neurological, and Obstetrical, of New York, as well as the society of Medical Jurisprudence in that metropolis.

**HUTTON, Terry J.**, of St. Paul, Minnesota, was educated in medicine at the Long Island College Hospital, Brooklyn, New York, and received the degree of M. D. from that institution in 1871. He has served as Assistant Physician to Brigham Hall Asylum, Burn Brae Asylum, and Resident Physician to Long Island College Hospital. He was formerly Professor of Diseases of the Mind and Nervous System in the College of Physicians and Surgeons, Chicago. His more important contributions to medical literature consist of articles entitled "Specific Treatment for First Stage of Diphtheria," "Chloroform as an Anesthetic," "Defensive Remarks on the Climate of Minnesota." Dr. Hutton is an accomplished neurologist and highly esteemed physician. He is a member of the Minnesota State Medical Society and the American Medical Association.

**HYATT, Elisha H.**, of Delaware, Ohio, was born near Wooster, in the same State, February 19, 1827, and is of Scotch ancestry. His literary education was acquired at the Academy at Edinburgh, and he subsequently became the recipient of a literary course at Ohio Wesleyan University, graduating from that institution in 1849. His medical studies were completed at Starling Medical College, where he received the degree of M. D. in 1857. For want of means he practiced for five years before graduation, and for the expenses of his education, from first to last, he was thrown entirely upon his own resources. His first place of settlement was in the western part of

Delaware county, Ohio, whence in 1861 he removed to the city of Delaware, where he still resides, actively engaged in an extensive and successful practice of his profession. During the War of the Rebellion he entered the United States Volunteer Service, as captain Company A, Twentieth Ohio Regiment, and afterwards was appointed an assistant surgeon. While a general practitioner, he has made a specialty of surgery, and has performed almost every important operation in that branch of medical science, including two cases of trephining, the skull in fractures. In 1875 he was elected Professor of *Materia Medica* and Therapeutics in Columbus Medical College. He is a member of the American Medical Association, of the Ohio State Medical Society, and of the Central Ohio Medical Association; he is ex-president of the Medical Association of Delaware County, and an honorary member of Northwestern Medical Association. His contributions to medical literature consist of a paper on "The Therapeutics of Alcohol," classifying this agent among narcotics. He maintains that it is not in a just sense a food, and that from its known effects upon albumen and fibrine, and also upon the red blood discs, it interferes with and prevents, in a great degree, the proper nutrition of the body, by causing contraction of the red globules, emptying them of their protogen (a necessary ingredient in the nerve centers), and that therefore no nutrition can be afforded by alcohol to the nervous system; on the contrary, it lessens nerve force and weakens muscular power, and that instead of increasing the caloric of the human body, it lowers the temperature. Dr. Hyatt has also contributed several other valuable articles to the literature of his profession relating to subjects of therapeutic interest.

**IRWIN, John A.**, of New York City, was graduated M. A. at Cambridge, England, and M. D. from Dublin University. He is a member of the Royal Chirurgical Society, England, and became a licentiate of the Dublin College of Physicians, Ireland, in 1875. He is a Fellow of the Obstetric Society, London; New York Academy of Medicine, member of the New York County Medical Society, and New York Society of Medical Jurisprudence. Dr. Irwin is late Physician to the Southern Hospital for Women and Children, Manchester, England; House Surgeon to the Royal Free Hospital, London, and Assistant Physician to Shrewsbury Asylum. He is now engaged in the practice of his profession in New York, and has given special attention to obstetrics and diseases of women and children.

**ISHAM, Ralph N.**, of Chicago, Illinois, was born in Manheim, Herkimer County, New York, March 16, 1831. After obtaining a good academic education he entered upon the study of medicine, attended the Bellevue Hospital Medical College, New York City, and received the degree of Doctor of Medicine from that institution in 1854, and then served a full term as House Physician and Surgeon in Bellevue Hospital. After this he selected Chicago as his field for the practice of his profession, and with a high order of natural talent, coupled with thorough professional training, he readily joined with others in organizing, in 1859, a new medical college, in that city, then known as the Medical Department of Linn University, an institution which, since 1869, has been called the Chicago Medical College and

Medical Department of the Northwestern University. To Dr. Isham was assigned the Professorship of Surgical Anatomy and Operative Surgery, in which he soon acquired a high reputation as a teacher, and as expert surgical operator. He rapidly gained a large and lucrative surgical practice. For many years he was the chief surgeon of the extensive northwestern railroad system, was at one time one of the Surgeons on the Staff of Cook County Hospital, and in 1881 he was transferred to the chair of Principles and Practice of Surgery and of Clinical Surgery. Professor Isham has not only won a high reputation as teacher and practitioner in his chosen field of medicine, but enjoys an equally high social position, and has found time to gratify his literary tastes by the collection of one of the largest private libraries in Chicago.

**IVES, Frank L.**, of New York City, was educated in medicine at the College of Physicians and Surgeons, New York, and received the degree of M. D. from that institution in 1871. He is now Surgeon to the Throat Department of the New York Eye and Ear Infirmary, and is an active member of the American Laryngological Association, New York Academy of Medicine, and the New York County Medical Association. Dr. Ives is an accomplished physician, and has devoted special attention to diseases of the throat, in which field of practice he is widely known.

**JACKSON, Frank W.**, of New York City, was educated in medicine at the College of Physicians and Surgeons, New York, from which institution he received the degree of M. D. in 1879. He is now Chief of the Medical Division of Vanderbilt Clinic, Attending Physician to Roosevelt Hospital Out Door Patients, and Assistant Visiting Physician to Bellevue Hospital. Dr. Jackson is an active member of the New York County Medical Society, New York Pathological Society, and New York Physicians Mutual Aid Association. He is also a Fellow of the New York Academy of Medicine.

**JACKSON, James P.**, of Kansas City, Missouri, was graduated M. D. at the St. Louis Medical College, St. Louis, Missouri, in 1868, and received an *ad eundem* degree from the College of Physicians and Surgeons, New York City, in 1873. He is now Professor of Surgery in the University Medical College of Kansas City. Dr. Jackson is an active member of the National Association of Railway Surgeons, American Medical Association, Missouri State, Jackson County, and Kansas City District Medical Societies.

**JACKSON, William Henry**, of New York City, was born in that city in 1810, and died there November 25, 1893. He was the son of the late Rev. John Frelinghuysen Jackson. After graduation from the College of Physicians and Surgeons in 1835, he traveled abroad in company with Dr. Valentine Mott. While abroad he visited the different hospitals in the large cities, and went as far as Egypt, where he made the medical institutions of that country objects of special study. On returning to this country he was made Head Surgeon of the New York Hospital. His close application to study and the duties of his important place so injured his health that he was obliged to give up active practice of medicine and devote himself almost entirely to the lighter care of managing

his large estate. Dr. Jackson was the oldest member of the College of Physicians and Surgeons, the Historical Society and the St. Nicholas Society. The last he joined in 1845. He also belonged to the New York County Medical Society, the Academy of Medicine, the Patria Club and the American Museum of Natural History, and other medical, scientific and social organizations of New York City.

**JACOBUS, Arthur M.**, of New York City, was graduated M. D. at the Bellevue Hospital Medical College in 1876. He is now Gynecologists to the Northwestern and Presbyterian Hospital Dispensaries. He is a member of the New York County Medical Society, New York Society of Medical Jurisprudence, Northwestern Medical and Surgical Societies, American Medical Association, and is also a Fellow of the New York Obstetrical Society and Academy of Medicine.

**JACOBY, George W.**, of New York City, was graduated M. D. at Bellevue Hospital Medical College in 1876, and his medical education and training were supplemented by attendance at the University of Berlin, Germany, from which he also received the degree of Doctor of Medicine in 1877. He is now Clinical Professor of Nervous Diseases in the Woman's Medical College, New York. Physician for Nervous Diseases and Neurologist to the German Dispensary, and is ex-President of the New York Neurological Society, and member of the American Neurological Association, New York Academy of Medicine; Society for the Relief of Widows and Orphans of Medical Men, and the Medico-Chirurgical Society of German Physicians of the City of New York.

**JANES, Henry**, of Waterbury, Vermont, was born in that city January 24, 1832. His father, Henry F. Janes, was formerly Vermont State Treasurer and member of Congress, and his mother, Fanny (Butler) Janes, daughter of Ezra Butler, former governor of Vermont and also a member of Congress. He received his medical education at the College of Physicians and Surgeons in New York, and graduated M. D. in 1855. Previous to final settlement in Waterbury, he was Assistant and House Physician in Bellevue Hospital, New York, and practiced for a few months in Chelsea, Massachusetts. His specialty is nervous diseases and surgery, and in the practice of the latter branch of his profession he has performed a large number of capital operations. He is a member of the Washington County Medical, the Vermont State Medical, and the Massachusetts Medical Societies. Of the two first named he has been president. He is also a member of the American Medical Association. On various occasions he has read articles on "Gun-shot Wounds," "Accident after Amputations," "Amputations at Knee-Joint," and other surgical subjects, before the societies of which he is a member. In 1861 he became Surgeon of the Third Vermont Volunteers; in 1863 was appointed Surgeon United States Volunteers, and was in charge of hospitals at Burkettsville and Frederick, Maryland, in 1862. He also served in the capacity of Surgeon-in-Charge in the Sixth Army Corps Hospital; in charge of the hospitals of the Army of the Potomac, at Gettysburg, and afterwards in charge of the hospitals in Philadelphia and Vermont, to the close of the Civil War, when he resigned from the army and resumed private practice in his native place, where he has since remained.

**JANVRIN, Joseph E.**, of New York City, was educated in medicine in the College of Physicians and Surgeons of New York, from which institution he received the degree of M. D. in 1864. He is now Gynecologist to the New York Skin and Cancer Hospital, and Consulting Surgeon to St. Elizabeth's Hospital, Dr. Janvrin is a member of the American Medical Association, American Gynecological Association, New York County Medical Society, New York Obstetrical Society, New York Academy of Medicine, and numerous other medical, scientific, and social organizations.

**JARMAN, George W.**, of New York City, was graduated M. D. at the Bellevue Hospital Medical College in 1888. He is now Assistant Gynecologist to the New York Cancer Hospital and Vanderbilt Clinic, Lecturer on Gynecology in the New York Polyclinic, Assistant Obstetrical Surgeon to Charity Hospital, and Clinician to St. Bartholomew's Dispensary. He is an active member of the New York Academy of Medicine, and the New York County Medical Society, as well as numerous other medical and scientific organizations.

**JENNINGS, Charles G.**, of Detroit, Michigan, was graduated M. D. at the Detroit Michigan College in 1879. He is now Professor of Physiology and Diseases of Children in the Detroit College of Michigan, member of the Michigan State Medical Society, Detroit Gynecological Society and Detroit Medical and Library Association. Dr. Jennings is also an active member of the American Medical Association, of which he is chairman of the Section of Diseases of Children.

**JEWELL, James Stewart**, of Chicago, Illinois, was born in Galena, in the same State, September 8, 1837, and died at his home in the former city April 18, 1887. He received his general education in the schools of his native city, and in 1855, at the age of eighteen, began the study of medicine under the preceptorship of Dr. S. M. Mitchell, of Williamson county, in his native State. He attended his first course of medical college instruction in Rush Medical College in 1858-59, and his second course in the Medical Department of Lind University in 1859-60, which was the first session after the establishment of that institution, and, under the teaching of Prof. Titus Deville, he became an enthusiastic student of anatomy and received the degree of Doctor of Medicine at the first public commencement of that medical school. He then engaged in a successful general practice in Williamson county until 1862, when he returned to Chicago and was appointed to the Professorship of Anatomy in his *Alma Mater*, which position he filled with unusual zeal and ability until 1869, when he resigned under the impression that he would engage in the special study and teaching of biblical history. He spent one year or more in traveling, much in Palestine and Egypt, but not neglecting to visit the chief medical institutions of Europe. On his return to Chicago in 1871 he decided to resume the practice of medicine, but gave his chief attention to the treatment of nervous and mental diseases, and the following year he was appointed Professor of Nervous and Mental Diseases in the Chicago Medical College, and, according to the testimony of Dr. N. S. Davis, his biographer, he discharged the duties of that position with all the enthusiasm and popularity that had characterized his previous work in

the chair of Anatomy in the same college. In 1874 he commenced editing and publishing the *Journal of Mental and Nervous Diseases*, a large quarterly, on which he bestowed a great amount of mental labor, and to which he soon gave a reputation unequalled by any other journal in the same department. Dr. Jewell was one of the founders of the American Neurological Society, and served as its president three successive years; he was also an active member of the American Medical Association, of the Illinois State Medical Society, the Chicago Medical Society, the Chicago Academy of Sciences and the Wisconsin Academy of Sciences. He received the degree of Master of Arts from the Northwestern University in 1869; was familiar with several modern languages, and had collected one of the most valuable private libraries in Chicago. He early began to suffer from attacks of pulmonary disease that several times interrupted his labors, and finally compelled him to transfer his journal to other hands, and in 1883 to resign his professorship in college, and spend much of his time in milder climates. He died, aged a little less than fifty years. During the twenty-seven years of his professional life, he accomplished an amount of valuable medical, scientific, moral, and religious work rarely equaled by others in the same length of time. For, continues his biographer, he was always ready and equally at home whether in his library, his lecture-room, at the bedside of the sick, in the halls of science, in the sabbath-school, or with the loved ones at his own fireside.

**JOHNSON, Amos Howe**, of Salem, Massachusetts, was born in Boston, August 4, 1831. He fitted for college at Phillips Academy, Andover, Massachusetts, graduated at Harvard in 1853, and also from Andover Theological Seminary in 1856. In January, 1857, he settled over the church in Middletown, Massachusetts. In the fall of 1862 he commenced the study of medicine, graduated at Harvard Medical School in 1865, commenced practice at Middleton in November, 1866, visited Europe and attended medical lectures at La Charite Hospital in Berlin, and also at Vienna, during 1869, 1870 and 1871, and on returning settled in Salem in May of the last-named year. He is a member of the Essex Institute, Salem; president of the Essex South District Medical Society, elected in May, 1877, and was a member of the International Medical Congress, held in Philadelphia in 1876. He is the author of "Correspondence of the State Medical Board of Health," "Report of Distribution of Diphtheria in Salem," State Board of Health essay on "Physiological Limitations of Religious Experience," "Sanitary Condition of Salem," "Scarlet Fever," and other important articles of professional and public interest. He has lectured in the summer school of biology connected with the Peabody Academy of Science at Salem, on "The Function of the Nervous System;" has also given a special course to the theological students at Andover on the relations of "Physiological Conditions to Mental Experience." He has held the position of Physician to Salem Hospital.

**JOHNSON, Francis M.**, of Kansas City, Missouri, was educated in medicine at the Medical Department of the University of Louisville and received the degree of M. D. from that institution in 1852, and was granted an *ad eundem* degree from the Missouri Medical Col-

lege, St. Louis, in 1861. Dr. Johnson is now Professor of Obstetrics in the Kansas City Medical College, and is Dean of the Faculty of that institution.

**JOHNSON, Frank Seward**, of Chicago, Illinois, was educated in medicine at the Chicago Medical College, from which institution he received the degree of M. D. in 1881. He is now Physician to Michael Reese Hospital, Pathologist to Mercy and St. Luke's Hospitals, Consulting Physician to Woman's Hospital, and Professor of Pathology and Pathological Anatomy in the Chicago Medical College.

**JOHNSON, John W.**, of Boston, Massachusetts, was educated at Harvard, from which institution he received his medical degree in 1877. He is now Professor of Obstetrics and Gynecology in the College of Physicians and Surgeons, Boston, and Treasurer of the same. Dr. Johnson is a member of the Massachusetts Medical Society and the American Medical Association. He has devoted special attention to obstetrics and diseases of women, and is proprietor of a private lying-in hospital in Boston.

**JOHNSON, Walter Buckley**, of Paterson, New Jersey, was educated in medicine at the College of Physicians and Surgeons, New York, and received the degree of M. D. from that institution in 1878. He is now Surgeon to the Paterson Eye and Ear Infirmary; member of the Medical Staff of Paterson General Hospital; St. Joseph's Hospital and the Paterson Orphan Asylum. Dr. Johnson is an active member of the American Medical Association; American Otolological Society, and Fellow of the New York Academy of Medicine.

**JOHNSTON, Wirt**, of Jackson, Miss., was born at Raymond, in the same State, August 31, 1846. After graduating at the Jefferson Medical College, Philadelphia, Pa., in 1868, he located at Jackson, but in 1869 moved to Tehula, Holmes county, Mississippi, where he remained until 1873, the date of his return to the former place, where he has since permanently resided. In 1876 he was elected recording secretary of the Mississippi State Medical Association, and was re-elected to fill that position in 1877; in the course of this year, also, he was elected secretary of the Mississippi State Board of Health. He has held the position of Physician to the Mississippi Penitentiary, and has served as a member of the Board of Trustees of the Mississippi State Lunatic Asylum.

**JONES, J. Brummell**, of Kansas City, Missouri, was graduated M. D. at the St. Louis Medical College, St. Louis, Missouri, in 1868. He is now Physician to the East Side Free Dispensary, Visiting Physician to the German Hospital, and late Professor of Clinical Medicine and Physical Diagnosis in the University Medical College of Kansas City. Dr. Jones is a member of the Missouri State Medical Society, and also of the Jackson County and Kansas City District Medical Societies.

**JONES, William Palmer**, of Nashville, Tennessee, was born in Adair county, Kentucky, October 17, 1819. He attended the Louisville Medical Institute in 1839-40, and received the degree of M. D. from the Medical College of Ohio in 1854, and subsequently an *ad eundem* degree from the Memphis Medical College. He established himself first at Edmuntton, Kentucky, then removed to Bowling Green, in the same State, and finally to Nashville in

1849. He is a member of the American Medical Association, the American Association for the Advancement of Science, and the Tennessee State Medical Society. In 1853, and for several years thereafter, he was one of the editors of the *Southern Journal of Medicine and Physical Sciences*, published in Nashville. His "Necessities of the Insane in Tennessee," *Transactions of the Tennessee State Medical Society*, "Adequate and Impartial Provision for the Insane of the State," are among public contributions to medical literature. He has also been connected with the unprofessional press in the capacity of editor and proprietor, having in 1852 established the *Parlor Visitor*, and in 1874 being associate editor of the *Tennessee School Journal*. He has held the position of Professor of *Materia Medica* in the Shelby Medical College, an institution founded by himself in association with a number of other physicians in 1858, and was placed in charge of the Academy Hospital, the first established in Nashville, on the arrival of the Union forces in Tennessee. In 1862 he was superintendent of the Tennessee Hospital for the Insane, the second, if not the first hospital for colored persons ever erected on this continent; and though unanimously re-elected to the same position in 1870, he declined accepting it, because of an injury which he had received from a lunatic, resulting in paralysis. In 1876 he was elected president of the Nashville Medical College, and made Professor of Psychological Medicine and Mental Hygiene in that institution. He has been president of the Nashville city council, and State Senator from the Nashville District; and while in the senate introduced the public school law, which provides "equal educational advantages for all the children of the State, without reference to race, color, or condition;" he also obtained the provision by law for two additional hospitals for the insane. In May, 1877, he was appointed and confirmed postmaster of Nashville, which position he held for several years.

**JUDKINS, William**, of Cincinnati, Ohio, was graduated M. D. at the Miami Medical College, Cincinnati, in 1873, and received the *ad eundem* degree from the Medical College of Ohio in 1889. He is ex-president of the Cincinnati Academy of Medicine and ex-professor of Physiology and Clinical Lecturer on Genito-Urinary Diseases in the Cincinnati College of Medicine and Surgery. He is an active member of the Congress of American Physicians and Surgeons, American Association of Andrology and Syphilology, American Medical Association and Ohio State Medical Society. Dr. Judkins is also Medical Examiner and Advisor for several of the leading life and accident insurance companies of this country.

**KALISH, Richard**, of New York City, was graduated M. D. at Bellevue Hospital Medical College in 1875. He has since devoted special attention to ophthalmology, and is now Visiting Surgeon to Charity Hospital, Ophthalmic Surgeon to Church Hospital and Dispensary, and secretary of the Board of Governors of the same. Dr. Kalish is secretary of the New York Academy of Medicine and member of the New York County Medical Society and of other medical organizations of New York City.

**KEIPER, George Frederic**, of La Fayette, Indiana, was born in that city March 26, 1866. His ancestors are of German stock, his maternal grandfather a Saxon and his paternal

great-grandfather was a soldier of the Revolution. Both father's and mother's family contained five physicians, four being uncles. His father practiced medicine fifty years. The subject of this sketch received the degree of A. B. from DePauw University, Greencastle, Ind., in 1887, and the degree of A. M. in 1890. He commenced the study of medicine with his father, and also under the preceptorship of Dr. Geo. F. Beasley, of La Fayette, and graduated in medicine in 1890 at the Department of Medicine and Surgery, University of Michigan, Ann Arbor. His medical knowledge has been supplemented by attending hospitals in various large cities. He has practiced medicine in his native city since graduation. In 1891 he withdrew from general medicine to limit his practice to the eye, ear, nose and throat. In the same year he was appointed expert eye and ear examiner for the Pension Bureau and reapointed in 1893. Dr. Keiper is now Ophthalmic and Aural Surgeon to St. Elizabeth Hospital, St. Joseph Orphan Asylum and Martha Ray Methodist Episcopal Hospital, Lafayette. He has contributed numerous articles to medical publications, among which the following have received considerable mention: "Steel in Iris for Twenty-seven Years, Sympathetic Inflammation, Operation, Recovery," "Removal of Piece of Beard of Wheat from Iris;" "Etiology and Prevention of Blindness," and "Etiology and Prevention of Deafness."

**KELSEY, Charles B.**, of New York City, was educated in medicine at the College of Physicians and Surgeons, New York, from which institution he received the degree of M. D. in 1873. Since which time he has devoted special attention to the surgical treatment of diseases of the rectum, in which field of practice his skill and success has gained for him a wide and well-deserved reputation, and he has become, through his teaching and writing, a recognized authority. He is now Professor of Diseases of the Rectum in the New York Post-Graduate Medical School and Hospital, and formerly held the same position in the University of Vermont at Burlington. Dr. Kelsey is an active member of the New York Academy of Medicine, and of numerous other leading medical societies of that metropolis.

**KETCHUM, George A.**, of Mobile, Alabama, was educated in medicine at the University of Pennsylvania, and received the degree of M. D. from that institution in 1846. He is now Professor of Theory and Practice of Medicine in the Medical College of Alabama and Dean of the Faculty. Dr. Ketchum is ex-president of the Medical Association of the State of Alabama, ex-president of Mobile County Medical Society, member of the American Medical Association, and member of the International Medical Congress. He is president of the Board of Health of the city and county of Mobile, and also a member of the State Board of Health of Alabama.

**KIMBALL, James H.**, of Denver, Colorado, was graduated M. D. at Harvard University Medical School, Boston, Massachusetts, in 1867. He is now Professor of Principles and Practice of Medicine and Clinical Medicine in the University of Colorado Medical School. Dr. Kimball is an active member of the Colorado State Medical Society, Arapahoe County Medical Society, Denver Medico-Legal Society, and Denver Medical Association.

**KING, Alexander T.**, of Pueblo, Colorado,

was graduated M. D. at the Chicago Medical College, in 1881. He is now Visiting Surgeon to the Woman's and St. Mary's Hospital, Consulting Surgeon to the Colorado Coal and Iron Company Hospital, Pueblo, and Local Surgeon for the Denver and Rio Grande and Union Pacific Railway Companies. Dr. King is a member of the Colorado State Medical Society and president of the Pueblo County Medical Society.

**KING, Oscar A.**, of Chicago, Illinois, was educated in medicine at Bellevue Hospital Medical College, New York City, from which institution he was graduated M. D. in 1878, since which time he has devoted special attention to diseases of the nervous system, in

Oscar A. King

which field of practice his skill and success has gained for him a wide and well-deserved reputation. He is now Professor of Diseases of the Brain and Nervous System, and Clinical Medicine in the College of Physicians and Surgeons, Chicago; Physician-in-Chief of the Department for Nervous Diseases in the West-Side Free Dispensary, Chicago, and President and Superintendent of Oakwood Springs Sanitarium, Lake Geneva, Wisconsin. Dr. King is an active member of the Chicago Medical Society, Wisconsin State Medical Society and the American Medical Association.

**KING, Robert Maurice**, of St. Louis, Missouri, was born at Madisonville, Hopkins county, Kentucky, June 1, 1843, and is of Scotch-Irish descent. He became motherless at the age of six months, and fatherless at ten years of age. Left to carve out his own fortunes, by industry and frugality he was enabled to support himself, and pay for a literary and medical education. He took a literary course at Princeton College, Princeton, Kentucky, and then began the study of medicine under

an able preceptor, Dr. George W. Noel, of Madisonville, in the same State. He graduated in medicine at Jefferson Medical College, Philadelphia, Pa., in March, 1865, and afterward received an *ad eundem* degree from the Miami Medical College, Cincinnati, Ohio. Bethany College, of Virginia, conferred upon him the degree of A. M. For twelve years he practiced medicine in the town of his nativity, with good success. For seventeen years last past he has, with marked success, practiced his profession at St. Louis, Missouri. His practice, always good, has become large and remunerative. Of late years it has mainly been in the line of obstetrics and diseases of children, and is gradually merging into that of obstetrics exclusively. During these years he has performed many operations in minor and major surgery with brilliant success, particularly in the removal of stones and tumors from the bladder. His success in obstetrical work has been unusual and sometimes remarkable. During the epidemic of small-pox in 1865, and of cholera in 1874, in southwestern Kentucky, he was indefatigable and very successful. In 1874, Governor Leslie appointed him one of the Board of Medical Examiners for the State of Kentucky, in which position he served two years. He served a term as vice-president of the McDowell Medical Association of Kentucky. In 1876 he removed to St. Louis, Missouri, and, in 1880, was appointed to the chair of Physiology and Clinical Medicine in the College of Physicians and Surgeons of St. Louis; which position he successfully and satisfactorily filled for five years. During this time he was also a consultant physician upon the Medical Staff of the St. Louis City Hospital. In 1888 he was appointed to the chair of Materia-Medica and Clinical Therapeutics in Beaumont Hospital Medical College of St. Louis; which chair he held for two years, and was then elected to the chair of Obstetrics and Diseases of Children; which chair he now holds. He was also elected to, and now fills, the position as one of the Medical Staff of the Protestant Hospital of St. Louis. He has been the Medical Examiner of many Insurance Companies. In January, 1889, he was elected to the honorable and responsible position of Supreme Medical Director of the Legion of Honor; to which position he has been re-elected each year since. Dr. King is not only learned in the theories of his profession, but his sound judgment, enlightened by a careful study of conditions, broadened by analytical habits of thought and extended by a wide experience, enables him to apply theoretical knowledge to all the varied conditions which may surround his patients, and thus insure the highest degree of success. He brings to bear upon the performance of his professional duties, native ability, zeal, learning, experience, and correct judgment. Kind, careful, courteous, considerate, and conscientious, he has the confidence of his professional brethren, the affection of his patients, and the esteem of all his acquaintances.

**KINNAMAN, Horace H.**, of Keokuk, Iowa, was graduated M. D. at the College of Physicians and Surgeons, Keokuk, in 1882, and received the *ad eundem* degree from Jefferson Medical College, Philadelphia, in 1884. He is now Demonstrator of Anatomy and Professor of Diseases of Children in the Keokuk Medical College. He is secretary of the Keokuk Med-

ical Society, and member of the Iowa State Medical Society, as well as other leading medical organizations.

**KINNICUTT, Francis P.**, of New York City, was educated at Harvard, from which institution he received the degree of A. M., and subsequently entered the College of Physicians and Surgeons, New York, from which institution he received the degree of M. D. in 1871. He is now Attending Physician to St. Luke's Hospital, and the New York Cancer Hospital. He is also Consulting Physician to the Babies' Hospital, and trustee of the College of Physicians and Surgeons. Dr. Kinnicutt is an active member of the Association of American Physicians, and of other well-known medical organizations.

**KIPP, Charles John**, of Newark, New Jersey, was born in Hanover, Germany, October 22, 1838. He was educated in Hanover and New York, and studied medicine at the College of Physicians and Surgeons, New York City, graduating in March, 1861. He was appointed in the same year Volunteer Surgeon to the Fifth New York State National Guards; Assistant Surgeon Third Battalion New York Artillery, January, 1862; Assistant Surgeon United States Volunteers, May, 1863; Surgeon United States Volunteers, March, 1864, and brevetted Lieutenant-Colonel for faithful and meritorious services during the war, March, 1865. He served in the field till 1863, and performed hospital services after that at Nashville, Tennessee, and Indianapolis, Indiana, and was Chief of the United States Board of Inspectors of Recruits, at the general rendezvous of the State of Indiana. He also held the position of Medical Director of Freedmen's Bureau of that State from August, 1865, to February, 1868. He then began civil practice in New York and in Newark in 1869, where he has since remained, devoting special attention to diseases of the eye and ear. He is a member of the International Ophthalmological Congress; corresponding secretary of the International Otolological Society; elected in 1876 member of the American Ophthalmological, American Otolological, New York Ophthalmological, New York Pathological and Essex District Medical Societies; elected in 1877 one of the vice-presidents of the New Jersey Academy of Medicine, member of the Essex Medical Union, of the Newark Medical Association; president of the German Hospital Medical Association, elected in 1875; was also a delegate to the International Medical Congress, held in Philadelphia in 1876. His contributions to medical literature consist of contributions to the "Medical and Surgical History of the Rebellion;" "On the Affection of the Eye in Small-Pox," Proceedings of the Medical Society of New Jersey; "A Case of Sarcoma of Iris, Cured by Excision," and clinical essays in the Transactions of the American Ophthalmological and Otolological Societies.

**KNAPP, Herman**, of New York City, was born at Dauborn, Prussia, March 17, 1832. His father, John Knapp, was formerly a member of the Prussian House of Representatives and the German Reichstag. He was educated at the College of Weilburg, Prussia, till he was nineteen years old, completing his education by studying in the Universities of Munich, Würzburg, Berlin, Leipzig, Zürich, Vienna, Paris, London, Utrecht and Heidelberg, until he was twenty-eight years of age. He grad-

uated at Giessen in 1854, and settling in Heidelberg was appointed Lecturer in the University in 1860, and Professor of Ophthalmology in 1865. In 1868 he resigned both these positions, and coming to this country settled in New York City. He is a member of the American Ophthalmic, the New York County Medical, and the New York Pathological Societies—being President of the latter in 1874—also member of the New York Academy of Medicine, founded in 1869; and is now, and has been for many years, Surgeon of the New York Ophthalmic and Aural Institute, a hospital and school for the treatment and study of eye and ear diseases. Dr. Knapp started, and is now editor of the *Archives of Ophthalmology and Otology*, a purely scientific journal, published in German and English (W. Wood & Co., New York), and of which several largely illustrated volumes, in each of these languages, have appeared. He is also the author of numerous ophthalmological papers which have appeared in *Graefe's Archives* and the *Archives of Ophthalmology and Otology*, and some otological papers in the last-named journal. His contributions to medical literature which have appeared in book form are "The Curvature of the Human Cornea," Heidelberg, 1859; "On Hospitals in General, and Ophthalmic Institutions in Particular," Heidelberg, 1866; "The Intra-Ocular Tumors," with sixteen plates, Carlsruhe, 1869, and translated into English the same year. He was appointed, in 1873, Ophthalmic Surgeon to the New York Charity Hospital, a position he resigned in 1874, and in the same year was made Consulting Oculist for the several institutions of the Department of Public Charities and Correction; also in 1876 appointed Lecturer on Eye and Ear Diseases in the Spring Faculty of the College of Physicians and Surgeons, New York. He is now Professor of Ophthalmology in that institution. His skill as an ophthalmic and aural surgeon has gained for him a world-wide reputation, and he is no less known for his ability as a clinical teacher and contributor to the literature of his special field of practice.

**KNAPP, Philip C.**, of Boston, Massachusetts, was educated at Harvard, from which institution he received the degree of A. B. in 1878, and that of M. D. in 1883, since which time he has devoted special attention to diseases of the nervous system. He is now Clinical Instructor of Diseases of the Nervous System in Harvard Medical School, and Physician to Out Patients Diseases of the Nervous System, Boston City Hospital. Dr. Knapp is an active member of the Boston Society for Medical Improvement and for Medical Observation, Boston Medico-Psychological Society, Massachusetts Medico-Legal Society, New England Psychological Society, and the American Neurological Association.

**KNIGHT, Charles H.**, of New York City, was graduated in medicine at the College of Physicians and Surgeons, New York, in 1874, since which time he has devoted special attention to diseases of the nose and throat, in which field of medicine he is extensively known. He is now Professor of Laryngology and Rhinology in the New York Post-Graduate Medical School and Hospital, Surgeon to Throat Department of Manhattan Eye and Ear Hospital, secretary of the American Laryngological Association and member of the New York Academy of Medicine, and of numer-

ous other leading medical societies of New York.

**KNOTT, James Jerrold**, of Atlanta, Georgia, was born in McDonough, Georgia, June 16, 1839. He was educated at private schools, and studied medicine and graduated M. D., at the Atlanta Medical College, in 1859, and supplemented his education and training during the following year, by attending the schools and hospitals of Paris, France. On his return from abroad he settled first in Griffin, in his native State, and after the war (1865) in Atlanta, where he has since remained engaged in an active and successful practice of his profession. He entered the Confederate Army as a private, in March, 1861; was assigned to duty as an assistant surgeon, Fourth Regiment Georgia State troops, same year; after acting on the examining medical board, near Brunswick, Georgia, was ordered to Savannah; subsequently was appointed assistant surgeon of the Fifty-third Georgia Regiment, and placed in charge of various hospitals in that State; was present with his regiment in the seven days' fight before Richmond; in the Maryland campaign, at Sharpsburg; subsequently, at Fredericksburg, remaining on hospital duty there until June, 1863; was afterwards at Gettysburgh; with Bragg at Chickamauga, at Knoxville, and again with Lee at Gordonsville, Wilderness, and Petersburg; promoted to surgeon, 1864; and while sick was placed in charge of the hospital at Augusta, where he remained till Johnston's capitulation. He is a member of the Fulton County Medical Society, and of the Medical Association of Georgia. His contributions to medical literature consist of "Cases of Excision of the Elbow-Joint," "Creosote as a Remedy in Diphtheria," 1865; "Calomel in the Treatment of Tetanus," "Large Doses of Bromide of Potassium as a Remedial Agent," 1867; "Total Excision of Wrist-Joint," "Creosote as a Cure for Nurses' Sore Mouth," "Cimicifuga," "Strangulated Hernia Complicated with Hydrocele of Cord and Scrotum," 1877; "Injection of Carbonate of Ammonia into the Veins in Rattlesnake Bite," "Nitrate of Silver in Orchitis," and "Reports of Resections, Amputations, and Ligations, and Gunshot Wounds," to Surgeon-General's office. He was formerly Professor of Anatomy and Clinical Surgeon in Middle Georgia Medical College.

**KNOTT, John M.**, of Sioux City, Iowa, was born in Clifton, Ohio, March 5, 1846. On the paternal side he is of Scotch extraction, and on the maternal of German; his parents and grandparents were natives of America. In 1865 he was appointed Second-Lieutenant in the One Hundred and Eighty-sixth Ohio Volunteer Infantry, and on the following September was promoted to a First-Lieutenancy. He acquired his academic education at Wittenberg College, Springfield, and was prepared for a professional career in the National Medical College, Washington, D. C., graduating from that institution March 2, 1870. His first place of settlement was at Joliet, Illinois, in March, 1871, but in 1872 he removed to his present location in Sioux City. He was married, May 19, 1870, to Caroline L. Van Buren, then a resident of Chatham, New York. While attending to a general practice, he bestows special attention upon diseases of women and diseases of the chest. He is a member of the Sioux City Medical Society, Iowa, and is ex-secretary and ex-president of that organization. At va-

rious times he has read before medical societies papers on "Membranous Enteritis," "Quinia in Acute Inflammatory and Acute Infectious Diseases," "Sclerosis of the Brain," "Chloral in Puerperal Eclampsia," and upon other topics of medical interest. In August, 1873, he was appointed United States Examining Surgeon for Pensions, a position he held for several years.

**LAMB, Daniel Smith**, of Washington City, D. C., was born in Philadelphia, Pennsylvania, May 20, 1843. His ancestry came from England before the war of the Revolution. He was educated in the public schools of his native city, and received the degree of A. B. from Central High School in 1859, and that of A. M. from the same institution in 1864. During the War of the Rebellion he enlisted as a private soldier in the Eighty-First Pennsylvania Volunteers, and served in that capacity from September, 1861, until May, 1864, when he was appointed Hospital Stewart in the United States Army, and held this position until 1868. He was then appointed Acting Assistant Surgeon United States Army, and served in that position until July, 1892, making the total period of his continued and faithful service in the United States Army over thirty years. He studied medicine under the preceptorship of Edwin Bentley, Surgeon United States Volunteers, and entered the Medical Department of Georgetown University, Washington, D. C., from which institution he received the degree of M. D. in 1867. Soon after he was graduated in medicine he established himself in Washington City, where he has since remained. Dr. Lamb is a member of the Anthropological and the Microscopical Societies of Washington City, and also of the Anthropometric Society and Association for the advancement of Sciences, United States of America. In July, 1892, Dr. Lamb was appointed Pathologist to the Army Medical Museum, a position he now holds. In October, 1873, he was chosen Professor of Materia-Medica and Therapeutics, and afterwards Professor of Anatomy, in the Medical Department of Howard University, Washington, D. C., and has held this chair to the present time. He has been Secretary of the Association of American Anatomists since 1890. He was Secretary of Section on Anatomy Pan-American Congress, 1893. He is President of the Association of Acting Assistant Surgeons United States Army; Vice-President of Woman's Clinic, Washington, D. C., and is late Vice-President of the Medical Society of the District of Columbia. He has made important contributions to medical literature, among which articles may be mentioned: "On Tracheo-Esophageal Fistula," "On Eight Rib Sternums," "On Olecranon Perforation," "Reports of Post-Mortem Examination of President Garfield," "Reports of Post-Mortem Examination of Charles J. Guiteau's Mechanical Suffocation," in the new *Medical Jurisprudence*, now being published by William Wood & Co., New York. Dr. Lamb's long and faithful military service, and since then his brilliant anatomical investigations and the executive ability that he has shown in connection with the Army Medical Museum, have been highly appreciated by the national government and the medical profession. His name will always be associated honorably with the above-mentioned institution, which owes much to his energy and professional knowledge.

**LANE, Levi Cooper**, of San Francisco, California, was educated at Union College, New York, from which institution he received the degrees of A. M. and LL. D. He was graduated M. D. at Jefferson Medical College, Philadelphia, Pa., in 1851. He became a member of the Royal Chirurgical Society, England, in 1875, and has supplemented his education by attending the schools and hospitals of Europe. Dr. Lane is the founder and endower of the Cooper Medical College, San Francisco, California, and is now Professor of Surgery in that institution.

**LANPHEAR, Emory**, of Kansas City, Missouri, was born in New York July 16, 1859. He was educated at Emporia, Kansas; St. Louis, Missouri, and in Germany. He graduated in medicine at the Missouri Medical College, St. Louis, in March, 1881, receiving the prizes in anatomy, surgery and diseases of women. In 1886 he became Professor of Mental and Nervous Diseases in the Medical Department of the University of Kansas City. In 1887 he organized the Kansas City College of Pharmacy, and was elected president of the board of trustees, a position he still retains; he has also been Professor of *Materia Medica* in the same institution since the opening of the school. In 1888 and 1889 he filled the chair of *Materia Medica* and Therapeutics in the University Medical College, and having taken post-graduate instruction in the East, limited his practice to surgery and diseases of women. In 1890, 1891, and 1892 he was Professor of Orthopedic Surgery in the University Medical College of Kansas City, and acted as Surgeon to the East Side Dispensary, to All Saints Hospital, and to the German Hospital. In 1893 he resigned from the University and became Professor of Operative Surgery and Clinical Surgery in the Kansas City Medical College. Since 1885 he has been editor of the *Kansas City Medical Index*, and since 1891 of the *American Journal of Surgery and Gynecology*. He has published many papers upon surgical subjects, among which may be mentioned a report of the third operation in America for removal of the gasserian ganglion, a report of four successful amputations at the hip-joint, a rapid method of performing abdominal hysterectomy (by means of vaginal clamps), a report of sixty-four cases of cerebral surgery, and the surgical aspects of cerebral localization. In medical societies he has always taken very great interest. He is now an active member of the American Medical Association, the National Association of Railway Surgeons, the Mississippi Valley Medical Society, the Missouri Valley Medical Association, the Tri-State Illinois, Iowa and Missouri Medical Society, the Kansas City District Society, the Missouri State Medical Association, as well as honorary member of the Kansas State Medical Society, the Southern Kansas, Eastern Kansas, Golden Belt, Southwest Missouri, and many other medical organizations. He is now president of the Kansas City Academy of Medicine.

**LATON, Winfield S.**, of Minneapolis, Minnesota, was born in Penobscot county, Maine, April 24, 1854. He acquired an education in his native State, graduating from the Eastern State Normal School at the age of nineteen, with high honors. He was a successful teacher in the high schools and academies of the State for several years before and after graduating.

After spending a year at Bowdoin College, he went to Portland to continue the study of medicine, and from there went to the Long Island College Hospital, Brooklyn, New York, where he graduated M. D. in 1877. Most of the following year was devoted to work in the hospitals of New York City, with a special course at Blackwell's Island. In the spring of 1878 he located on the frontier in Western Texas, and for four years was engaged there in a large and lucrative practice, gaining an experience which has been of inestimable value to him. At the earnest solicitation of friends, in 1882, Dr. Laton was induced to locate in Minneapolis. After spending several months in the hospitals of Chicago and taking a post-graduate course in that city, he commenced active practice in Minneapolis. He was very soon elected to the chair of Toxicology and *Materia Medica* in the Minnesota Hospital College, and shortly after to the chair of Physical Diagnosis. The years of 1884-5 were devoted to the study of the diseases of the nose and throat in the hospitals of Europe. On his return he was elected by the Regents of the State University to the chair of Laryngology and Rhinology, the position which he still retains. Dr. Laton has written several articles of merit upon medical and climatological subjects, among which may be mentioned the "Pathology and Treatment of Tubercular Laryngitis," "Laryngeal Neoplasms" and "Western Texas, the Home for Consumptives."

**LEALE, John L.**, of Paterson, New Jersey, was educated in medicine at the College of Physicians and Surgeons, New York City, from which institution he received the degree of M. D. in 1884. He is now Visiting Surgeon to Paterson General Hospital, Visiting Surgeon and Physician to the Day Nursery, and Health Officer of the city of Paterson. He is also Medical Examiner and Advisor for the New York Life and the Metropolitan Life Insurance Companies. Dr. Leale is an active member of the American Public Health Association, New Jersey State Medical Society, and other leading medical and scientific organizations.

**LEE, Benjamin**, of Philadelphia, Pa., was graduated at the New York Medical College, New York City, in 1857. He is now Professor of Orthopedics in the Philadelphia Polyclinic and College for Graduates in Medicine, president of the American Orthopedic Association, and secretary of the Pennsylvania State Board of Health.

**LEMEN, Harrison A.**, of Denver, Colorado, was graduated M. D. at St. Louis Medical College in 1864. He is now Consulting Physician to St. Luke's Hospital and St. Joseph Hospital, Denver, and served as Surgeon to the Arapahoe County Hospital from 1876 to 1881. He is *Emeritus* Professor of Principles and Practice of Medicine, Medical Department of the University of Denver; member of the Colorado State Medical Society, of the Denver Medical Association, Arapahoe County Medical Society and ex-member of the Colorado State Board of Health.

**Le MOND, Robert Fields**, of Denver, Colorado, was educated at Central University of Kentucky, from which he received the degree of A. M., and was graduated M. D. from the Hospital College of Medicine, Louisville, Ky., in 1885. His medical education and training

were supplemented by attending the St. Louis Post-Graduate Medical School in 1888, and by serving as *Interne* at the Manhattan Eye and Ear Hospital, New York, during 1889, and also by attending the New York Post-Graduate Medical School and Hospital in 1892. He is now Professor of Ophthalmology and Otolaryngology in the Gross Medical College, Denver. He is an active member of the Colorado State Medical Society, Denver Medical Association, Arapahoe County Medical Society and the Denver Clinical and Pathological Society. His practice is limited to diseases of the eye and ear.

**LEVISEUR, Frederick J.**, of New York City, was educated at the University of Göttingen, Germany, from which institution he received the degree of M. D. in 1884. He is now Dermatologist to Randall's Island Hospital, and to St. Bartholomew's Dispensary. Dr. Leviseur is an active member of the New York Academy of Medicine, New York County Medical Society, German Medical Society, and other medical organizations of New York City.

**LEVY, Robert**, of Denver, Colorado, was graduated M. D. at Bellevue Hospital Medical College, New York, in 1884. He is now Professor of Physiology and Diseases of the Nose and Throat, in Gross Medical College, Denver, and is secretary of the Faculty of that institution. He is Laryngologist to St. Luke's Hospital, Deacons' Home and Hospital, and Arapahoe County Hospital. Dr. Levy is a member of the American Medical Association, Colorado State Medical Society, Denver Medical Association, Arapahoe County Medical Society, and the Denver Clinical and Pathological Society. His practice is limited to diseases of the nose and throat.

**LEWIS, Ernest S.**, of New Orleans, Louisiana, was graduated M. D. at the University of Louisiana, New Orleans, in 1862. He is now Professor of Obstetrics and Diseases of Women and Children in Tulane University of Louisiana, Visiting Surgeon to Charity Hospital, and an active member of the American Medical Association, Louisiana State Medical Association, Orleans Parish Medical Society, and the New Orleans Medical and Surgical Association.

**LEWIS, W. Milton**, of Baltimore, Maryland, was educated in medicine at the University of Maryland, from which institution he received the degree of M. D. in 1888. He is now Chief of the Clinic, Department of Laryngology, University of Maryland; Chief of Clinic, Surgical Department of Women's Medical College; Assistant Chief of Practice of Medicine in Women's Medical College, and a member of the Clinical Society of Maryland.

**LINCOLN, Nathan Smith**, of Washington City, D. C., was born at Gardner, Massachusetts, April 3, 1828. He is a grandson of Dr. Nathan Smith, of Yale College, and a son of the Reverend Sumner and Eliza (Smith) Lincoln. Having Graduated A. B. from Dartmouth College in 1850, he studied medicine under his uncle, Dr. Nathan R. Smith of Baltimore; at the same time attended medical lectures at the University of Maryland, and from that institution received his degree of M. D. in 1852. Until January, 1854, he practiced his profession in Baltimore, and since that date has been established in Washington. In 1857 he was elected Professor of

Chemistry in Columbian University; in 1859 was made Professor of the Theory and Practice of Medicine; in 1860 Professor of Anatomy and Physiology; and in 1861 Professor of Surgery. The latter chair was retained until 1874, when it was relinquished on account of the pressure of private practice. He is now *Emeritus* Professor of Surgery in that institution. After serving for several years as one of the surgeons to the Washington Infirmary, he was appointed in 1861 Surgeon-in-Chief of the hospitals established at Washington by the Quartermaster's Department, a position that he held during, and for some months after the conclusion of, the War of the Rebellion. In 1866 he was appointed one of the surgeons to the Providence Hospital, an appointment that he resigned in 1875. He has also been for a number of years Physician to the Deaf Mute College, and to several other institutions. He is now Consulting Surgeon to Garfield Hospital, Children's Hospital, Providence Hospital, and to Central Dispensary. Having made a specialty of surgery, he has performed a large number of important operations, including amputations at the hip-joint, lithotomy, removal of tumors from the region of the neck, and ligation of the large arteries. He is ex-President of the District of Columbia Medical Society, and a member of the Philosophical Society of Washington; of the American Association for the Promotion of Science, and of the American Medical Association.

**LINDSLEY, John Berrian**, of Nashville, Tennessee, was born at Princeton, New Jersey, October 24, 1822. He is descended from the Lindsleys, who were among the first settlers of Morristown, New Jersey, and from the Lawrences, who settled at Hell Gate, Long Island, in 1860. Having graduated A. B. from the University of Nashville in 1839, he entered the Medical Department of the University of Pennsylvania, graduating thence M. D. in 1843. In 1849-50 he attended lectures in the Medical Department of the University of Louisville. In 1852 and again in 1859 he pursued his studies in France and Germany. He was appointed, in October, 1850, Professor of Chemistry and Pharmacy in the Medical Department of the University of Nashville, and at the same time Dean of the Medical Faculty, holding his professorship until March, 1873. From 1855 to 1870 he was chancellor of the university, preserving it unharmed during the war. In 1856 the College of New Jersey conferred on him the degree of D. D. He married February 9, 1857, Sarah, daughter of Jacob McGavock, Esq., of Nashville. In February, 1862, at the request of Gen. A. S. Johnson, he accepted temporarily the position of Acting Post-Surgeon at Nashville. He is a member of the Tennessee State Medical Society, a Fellow of the American Association for the Advancement of Sciences, a delegate to nine conventions of the American Medical Association, a member of the Numismatic and Antiquarian Society of Philadelphia, and of the American Chemical Society of New York. Among his published works may be mentioned contributions to the "Medical Annals of Tennessee," to the "Sources and Sketches of Cumberland Presbyterian History," and in conjunction with Dr. J. G. M. Ramsey, of Knoxville, Tennessee, "Abridged Annals of Tennessee." In 1875 he was secretary to the State Board of Education of Tennessee; in 1876 he was Health Officer of Nash-

ville, also Librarian of the Tennessee Historical Society, and April 3, 1877, on the organization of the Tennessee State Board of Health, he was appointed secretary.

**LINK, John E.**, of Terre Haute, Indiana, was born and educated in Floyd county, that State, and at Paris, Illinois. After studying his profession he entered the Rush Medical College, Chicago, in 1860. In April, 1861, he enlisted as a private soldier in the Twelfth Illinois Volunteer Infantry and served three months in the regimental hospital and the same length of time as Hospital Steward in the Sixty-eighth Illinois Infantry. In October, 1862, he was appointed Assistant Surgeon of the Twenty-first Illinois Infantry, and in September, 1863, he became Surgeon of that regiment and served in that capacity until his command was mustered out in July, 1864. Much of his time was passed at the hospital at Murfreesboro, Tennessee, where he introduced his "hollow cone stumps" (reported to American Medical Association in 1875, at Louisville, Kentucky), and where he was appointed to special service as Operating Surgeon. He also held the same position at Nashville, Tennessee. In November, 1862, he married Miss Mary La Foe, formerly of Lexington, Kentucky. On his return from the army he attended the Chicago Medical College and was graduated M. D. from that institution in 1865. He then established himself in Terre Haute, where he has since remained engaged in an active and successful practice of general medicine and surgery, devoting special attention to the latter. He formerly held the chair of Anatomy in the College of Physicians and Surgeons of Indiana. He is late Chief Surgeon of Vandalia Railway Line and Local Surgeon of all other railroads passing through his city. He is an active member of the Vigo County Medical Society; ex-president of the Esculapian Society of Wabash Valley; ex-vice-president of the Mississippi Valley Medical Association; member of the American Medical Association and of the International Medical Congress. His contributions to professional literature mainly consist of papers and reports of cases read before the medical societies with which he is connected, based upon his extensive and varied medical and surgical experience. Articles from his pen on "The Use of Alcohol as an Anesthetic" and upon "The Pathology and Treatment of Influenza" have been widely published and are worthy of special mention.

**LOBINGIER, A. Stewart**, of Denver, Colorado, was graduated M. D. at the Medical Department of the University of Michigan, Ann Arbor, in 1889. He is now Professor of Pathology and Clinical Surgery in the University of Colorado, Pathologist to Arapahoe County Hospital and Surgeon Alternate to St. Luke's Hospital, Denver. Dr. Lobingier is an active member of the American Medical Association, secretary of the Colorado State Medical Society in 1892-93, and is a member of the Denver Medical Association, Arapahoe County Medical Society, Denver Obstetrical and Gynecological Society, Denver Clinical and Pathological Society, and Denver Medico-Legal Society.

**LOEB, Hanau W.**, of St. Louis, Missouri, was graduated M. D. at St. Joseph's Hospital Medical College, St. Joseph, Missouri, in 1887, and supplemented his medical education and

training by attendance at the College of Physicians and Surgeons, New York City, from which institution he received an *ad eundem* degree in 1888. He is now Professor of Diseases of the Nose and Throat in Marion-Sims College of Medicine, St. Louis, Missouri, and is an active member of numerous leading medical societies of this country, including the American Medical Association. Dr. Loeb has devised some very useful surgical appliances, and made important contributions to medical literature in the line of his special field of practice.

**LOGAN, James E.**, of Kansas City, Missouri, was graduated M. D. at the University Medical College, Kansas City, Missouri, in 1883, and received an *ad eundem* degree from Bellevue Hospital Medical College, New York City in 1884. He is now Professor of Diseases of the Nose and Throat in the University Medical College, Kansas City, and is an active member of the American Medical Association, Missouri State Medical Society, Jackson County Medical Society, Kansas City District Medical Society, and Kansas City Academy of Medicine.

**LOGAN, Samuel**, of New Orleans, Louisiana, was born April 16, 1831, in Colleton District, South Carolina, and is descended from a Scotch family, who were among the earliest settlers of that portion of the country. He was educated in the schools of Charleston, South Carolina; State University, at Columbia, and in the South Carolina Medical College, graduating from the latter institution with the degree of M. D. in March, 1853. He spent the three years succeeding his graduation in a country practice, twelve miles from Charleston, next in Charleston, South Carolina. During the late Civil War he served as Surgeon, Medical Director and Inspector in the Confederate States army. During 1866 he practiced his profession in Richmond, Virginia, and since then in New Orleans. He was Demonstrator of Anatomy, 1857-66, in the South Carolina Medical College, Charleston; Professor of Anatomy in the Medical College of Virginia, Richmond, 1866-67; Professor of Surgery for the next three years in the New Orleans School of Medicine, and in 1872 he was made Professor of Anatomy and Clinical Surgery in the Medical Department of the University of Louisiana. He is now Professor of Surgery in Tulane University of Louisiana, Visiting Surgeon to Charity Hospital, ex-vice-president of the American Medical Association, ex-president of the Louisiana State Medical Society, and ex-president of the New Orleans Medical and Surgical Association. He is the editor of *Gedding's Surgery*, and has also contributed many articles to the leading medical journals. He was married in September, 1871, to Mary Virginia, only child of George R. King, Esq., formerly judge of the Supreme Court of the State of Louisiana.

**LONG, William**, of New Maysville, Indiana, was born in Shelby county, Kentucky, October 28, 1810, and died May 5, 1880. His father, Thomas Long, was an early pioneer of Kentucky, and his mother, Nancy (Jackson) Long, a cousin of President Andrew Jackson, was a lady noted for her energetic character and vigorous intellect. The subject of this sketch was the oldest of a family of six sons and two daughters. His education in early life was limited, his opportunities for attending school being only such as were offered in the rural districts, but he possessed a mind that was ever

active in the acquisition of knowledge, which he valued only in so far as it could be made available and practical. He commenced reading medicine in early life, and under the most unfavorable circumstances, performing the hardest manual labor for the smallest wages to enable him to prosecute his studies, and in after years when he had acquired a fortune by his profession he often exhibited with great pride a volume of Hooper's Medical Dictionary that he obtained when a student with the money he earned by cutting nine cords of green wood in the month of August. Many a night did he ponder over his dearly bought books by the flickering light of hickory bark. Being southern born and raised, and belonging to a family of former wealth, we can form some idea of how much of the pride and prejudice incident to his section of our country he was required to overcome in obtaining his med-

*William Long.*

ical education in this way; but it was his only chance, and we here find evidence of that pluck, industry, and self-reliance which characterized him through life. We mention these facts for encouragement to young men who may try to excuse themselves by lack of opportunity in acquiring professional knowledge with all the educational facilities of the present day. In 1833 he emigrated from Kentucky to Indiana, and practiced medicine near Lafayette, and from this locality he removed the following year to New Maysville, Putnam county, in the same State, where he engaged in an active and successful general practice of his profession for a period of forty years, and where he continued to live respected and honored until his death. His arrival at the latter place was in the "dead of winter," 1834, at a time when the surrounding country was a "howling wilderness," when no roads were laid out, and when there was no way of getting from one house to another to see patients except by blazed paths through the dense forests.

At this time no other towns existed, and no other physicians were located within many miles to divide the cares and responsibilities of a laborious practice. At the time of his arrival in the new settlement, he is described as a fair-haired, slender, and very tall young man, about twenty-four years of age, his entire stock of worldly possessions as consisting of one dollar in money, the horse he rode, and saddle-wallets, one side containing a loaf of bread and the other filled with a small stock of medicine. Certainly not a very bright prospect for the future, but there was a glint of energy and determination in the clear gray eye of that young man that convinced the community that he had come to stay, and would prove equal to all future emergencies.

With good health, a vigorous constitution, untiring industry and indomitable energy, he was enabled to realize his ambition to meet the requirements of his profession and the multifarious duties of all good citizens. As a practitioner of medicine, he was especially noted for his diligent attention to cases and good judgment, as well as for his prudence, caution and skill, and was never misled by wild or visionary hobbies or notions. He was no theorist for the sake of theory, and only blended theory with practice when the former was confirmed by the crucial test of truth. His rule of life was to estimate any proposition or enterprise in the light of its results, and his keen perceptions, ready and correct conclusions, always made his opinion, advice and decisions valuable. For this reason, in the early settlement of his county he was not only consulted professionally, but his judgment was highly prized by his friends with reference to their business transactions, and those who availed themselves of his council rarely had cause to regret it. He made but little pretense to surgery, because with him its field was narrowed, but his remarkable success in the treatment of diseases of women and children and in combatting the various epidemics occurring during the early settlement of Indiana made the name of Dr. Long as familiar as household words in the families of the old settlers of that section of the State in which he practiced. He was an expert obstetrician, and his advice and assistance in difficult cases were often called in requisition by other members of the profession throughout his own and adjoining counties. He was the preceptor of a number of medical students, some of whom in after years became distinguished physicians and surgeons. Though the profits of his profession had been large, he was not one who believed in hoarding wealth, but was always noted for his deeds of charity, and for his liberal contributions to public enterprises, especially for institutions of learning, and for the dissemination of Christian knowledge and the support of the Missionary Baptist Church, of which he had been from early youth a constant member. It was his undeviating rule to never turn away from his door empty-handed any one seeking charity. Dr. Long, when in active life, stood over six feet in height, and in later years weighed near three hundred pounds, and was one of the largest men in western Indiana. He never personally used tobacco or spirituous liquors, and was noted for his discretion as well as temperate habits. His manners were plain and unassuming, em-

inently practical in his dealings, with a kind word and sympathy for all, he possessed the esteem and confidence of his fellow-man to an extraordinary extent. The honorary degree of Doctor of Medicine was conferred upon him by Rush Medical College, Chicago, in 1850. He retired from active practice a few years before his death. On July 24, 1834, he was married to Harriet Gregory, who proved a true and faithful companion in all the trials and achievements of his professional life. Two sons and four daughters were the result of this union, all of whom survived his death. His family was well represented in the medical profession. Three brothers and two nephews became eminent physicians and surgeons in Kentucky. One of his nephews (and namesake, the late Dr. William H. Long) was a distinguished surgeon in the United States Marine Hospital Service. Another (Dr. John L. Long) was for many years the Superintendent of the Louisville City Hospital. One of his sons, Dr. Robert W. Long, is a prominent physician of Indianapolis; and one of his daughters is married to Dr. R. French Stone, of the same city, and another daughter is the wife of Dr. George A. Biddle, the present Mayor of the City of Emporia, Kansas.

**LONG, William H.**, of Cincinnati, Ohio, died while in charge of the Marine Hospital in that city January 5, 1892. He was a native of Kentucky, and served as medical officer with the volunteer soldiers from that State in the Union Army during the War of the Rebellion. He was a graduate of the Kentucky School of Medicine, Louisville, in 1866, and in 1875 was appointed Assistant Surgeon in the United States Marine Hospital Service and stationed at Louisville. He was promoted to surgeon while serving at that station, and subsequently commanded the marine hospitals at Detroit, Chicago and Cincinnati. He was *Emeritus* Professor of Military Surgery in the Michigan Medical College, Detroit, and in a great measure to his untiring efforts that institution owes its existence and growth. He was an officer of fine executive ability and an excellent surgical operator, his herniotomy record being second to none in the service. In person he was very tall, being six feet and four inches in height, and was a man of the most charming and genial manners. He was not only exceedingly popular in his own corps, but in the medical profession at large he was widely and favorably known. By his death, both the former and the latter have lost one of their brightest ornaments, the country one of her strongest patriots, and suffering humanity an able, sympathetic friend. His wife's death occurred a few months previous to his own. Two minor children, a son and daughter, survived him.

**LONGSTRETH, Morris**, of Philadelphia, Pennsylvania, was educated in medicine at the University of Pennsylvania and received the degree of M. D. from that institution in 1869. He subsequently entered the Jefferson Medical College, Philadelphia, and received an *ad eundem* degree in 1876. He is now Professor of Pathological Anatomy in Jefferson Medical College and Attending Physician to Pennsylvania Hospital. Dr. Longstreth resides during the summer months at Bar Harbor, Maine.

**LONGYEAR, Howard W.**, of Detroit, Michigan, was educated in medicine at the College of Physicians and Surgeons, New York City, from which institution he received the degree

of M. D. in 1875. He is now Visiting Gynecologist to Harper Hospital, and president of staff of the Women's Hospital. He is a member of the Detroit Medical and Library Association, ex-president of the Detroit Gynecological Society and Vice-President of the American Association of Obstetricians and Gynecologists.

**LOVE, William Abram**, of Atlanta, Georgia, was born in Camden, Kershaw district, South Carolina, May 16, 1824. His parents were residents of that place in colonial times and suffered much at the hands of the British Tories during the Revolutionary War. By the death of his father, in his infancy, he was left an orphan. He was educated in the schools of Camden, and at Russell Place Academy. At the age of twelve, with a view to the study of medicine, he entered the drug-store of Dr. George Reynolds, continuing his studies under private tutors. As a medical student he was for four years under the preceptorship of Dr. E. H. Anderson. In 1844 he entered the Medical Department of the University of Pennsylvania; and, as a private pupil, the office of Dr. Samuel G. Morton, of Philadelphia. With a view to ultimate special work, he entered also the Obstetrical Institute, under Dr. Joseph Warrington, served his time under the direction of the lady managers of the Lying-in Charity and Nurse Society, and graduated at this institute in 1845. During the summer of this year he attended a course of lectures at the Locust Street Schools, and the ward and clinical services of the Blockley and Pennsylvania Hospitals. In order to prepare himself more perfectly for the special work of obstetrics and diseases of women and children, he attended regularly the lectures of Prof. H. L. Hodge, in the University, and the lectures of Prof. C. D. Meigs, in the Jefferson Medical College. On April 3, 1846, he received his degree of Doctor of Medicine at the University of Pennsylvania. In July, 1846, he located at Locust Grove, Taliaferro county, Georgia, where, January 11, 1849, he was married to Marion Louisa, daughter of Hon. Abner Darden. During the following winter he, with quite a colony of friends, removed to Floyd county, locating at Cave Spring. Here in 1850, he was elected Superintendent and Physician of the Georgia Asylum for the Deaf and Dumb, which position he occupied for several years. He aided much in building up this institution, at the same time devoting himself to the practice of his profession. The failing health of himself and his family admonished him to seek a warmer climate. In 1858 he removed to southwestern Georgia, and located at Albany. Here he soon established himself as a physician, a surgeon, and a gynecologist, and was regarded as the leading practitioner in that section. During the late war he served on the medical staff of the Confederate States Army, first in the field and later in the hospital. Doubtless many Southern soldiers remember him kindly in connection with the Ocmulgee Hospital, at Macon, Georgia. In 1866 he became a member of the Georgia Medical Association, and labored to build up that body again after the war. He was subsequently elected vice-president. One of the results of this organization was the establishment of congressional district sections on practice, surgery, and gynecology. He is a permanent member of the American Medical

Association, and was president of the Section of Physiology of the Ninth International Medical Congress. In 1870 he removed to Atlanta, Georgia, for the purpose of widening his field in the special practice of gynecological and neurological medicine. In this he has been eminently successful, and by results of work has established a reputation which extends his labors and domain of usefulness through Georgia, South Carolina, Florida, Alabama, and Tennessee. In 1871 he was elected to the chair of Physiology and Pathological Anatomy in the Atlanta Medical College, which position he still occupies, and is now (1893) president of the faculty of that institution. As a practitioner, as a writer, as a speaker, and as a teacher, he has always been a strong advocate for "Principles in Medicine" and "Conservatism in Practice," and among his contributions to the medical press no production has attracted more attention than his "Plea for Principles and Conservatism in the Treatment of Diseases Peculiar to Females." He has always avoided political preferment, desiring rather to bend his energies to the interest and advancement of his profession.

**LOWMAN, John H.**, of Cleveland, Ohio, was born in that city in 1849; graduated at the Wesleyan University in 1871, receiving from the same institution the degree of A. M. in 1874; was House Surgeon in the Charity Hospital at Cleveland from 1872 to 1874, and graduated M. D. in 1873 from the Medical Department of Wooster University at Cleveland, receiving in 1877 the *ad eundem* degree from the College of Physicians and Surgeons of New York City. He began the general practice of medicine and surgery in his native city in 1875, and has remained there. He has made a specialty of diseases of the throat and air passages. He is a member of the Cuyahoga County Medical Society and of the Ohio State Medical Society. In 1874-75 he was House Surgeon of Charity Hospital, Blackwell's Island, New York City; in 1875 Lecturer on *Materia Medica* in the Medical Department of Wooster University, and in 1876 chosen Professor of *Materia Medica* and Therapeutics in that institution. In the same year he was appointed one of the Visiting Board of Physicians and Surgeons of Charity Hospital, Cleveland.

**LYMAN, Henry M.**, of Chicago, Illinois, was born at Hilo, Hawaiian Islands, November 26, 1835. His parents were from New England, United States of America. He received a common school and academic education at the Islands. He entered Williams College, Williamstown, Massachusetts, in 1854, and was graduated, with the valedictory oration, in 1858. He studied medicine in the Harvard Medical School during the winter of 1858-9, and then entered the College of Physicians and Surgeons in New York, where he was graduated, valedictorian of his class, in March, 1861. Dr. Lyman served as House-Surgeon in Bellevue Hospital, New York, from October, 1860, until April, 1862, when he was appointed Acting Assistant Surgeon United States Army, and was assigned to duty in the United States Hospital in Nashville, Tennessee. There he remained in active service until compelled by a severe attack of malarial fever to return North in the spring of 1863. Shortly after this he was married to Miss Sarah K. Clark, in Roxbury, Massachusetts, and in October,

1863, began the practice of medicine in Chicago, Illinois, where he has resided ever since. In 1865 he became a member of the Medical Staff of the Cook County Hospital, and held the position of Visiting Physician to that institution until 1876. In 1871 he was appointed Professor of Chemistry in Rush Medical College, holding that position until 1876, when he was made Professor of Nervous Diseases. A year later he became Professor of Physiology and of Nervous Diseases in the same institution, and in 1890 he was transferred to the chair of Theory and Practice of Medicine, which he still occupies. In 1880 he wrote a work on "Artificial Anesthesia and Anesthetics," published by Wm. Wood & Co., of New York. Three years later he issued a smaller volume, on "Insomnia and the Disorders of Sleep," published by W. T. Keener, of Chicago, and in 1892 appeared his "Treatise on the Theory and Practice of Medicine," published by Lea Brothers & Co., of Philadelphia. Dr. Lyman has been the senior Visiting Physician to the Presbyterian Hospital in Chicago since 1883. He has been the president of the Chicago Pathological Society. He was the annual president of the Association of American Physicians for the year 1891-2, and of the American Neurological Association during the year 1892-3. He is also a member of the Illinois State Medical Society. From 1881 till 1889 he was Professor of Theory and Practice of Medicine in the Woman's Medical College of Chicago.

**McCORMICK, Samuel Carson**, of Duluth, Minnesota, was born at Selin's Grove, Pennsylvania, September 8, 1837. He is of Scotch-Irish descent, and was educated at Tuscarora Academy, Lewisburg University, and Jefferson Medical College, having graduated M. D. from the last-named institution in March, 1862, and immediately thereafter he was appointed Surgeon in the United States Volunteer Army. On being mustered out of the service at the end of the war, he established himself in Athens county, Ohio; practiced there for a year, then, until 1868, in Mauch Chunk, Pennsylvania; in the latter year and 1869 he was Surgeon to the Union Pacific Railroad Company during the construction of its line, and since 1870 has been established in Duluth, where he has been engaged in an extensive and successful practice of general medicine and surgery. He is a member and ex-vice-president of the Minnesota State Medical Society. For several years he was Health Officer of Duluth and Physician of St. Louis county, Minnesota.

**McCULLOCH, Albertis P.**, of Brooklyn, Iowa, of Scotch ancestry, was born in Benton, Holmes county, Ohio, April 1, 1844. His literary education was received at the University of Michigan, and his medical at Rush Medical College, Chicago, whence he graduated M. D. in March, 1868. He practiced his profession in De Soto, Dallas county, Iowa, till July, 1872, when he removed to the place of his present residence, where for over twenty years he has been engaged in an extensive and successful practice of general medicine and surgery. In November, 1874, he made a European trip, visiting the leading hospitals of Great Britain, and spending three months at the medical department of the University of Edinburgh. He is a member of the Iowa State Medical Association, and is ex-President

of the Poweshiek County Medical Association. Among his notable cases successfully treated may be mentioned that of varicocele by ligating the vein with Lister's prepared catgut; a suicidal cut throat, with trachea half severed, sutures applied and external wound sewed up; castration for encephaloid disease of testicle, the malignant growth weighing two pounds two ounces; and excision of inferior maxillary. In January, 1877, he married Susie M. Lyon, of Des Moines, Iowa.

**McLAUTHLIN, Herbert W.**, of Denver, Colorado, was educated at Harvard University Medical School, from which institution he received the degree of M. D. in 1882. He is now Professor of Materia Medica, Therapeutics and Clinical Medicine in the University of Colorado Medical School, Denver, and secretary of the Faculty of that institution. He is a member of the Colorado State Medical Society, and during the years of 1892-93 was president of the Denver Medical Association, and of the Arapahoe County Medical Society.

**McLEAN, Angus**, of Detroit, Michigan, was graduated M. D. at the Detroit College of Medicine in 1886. He is now Demonstrator of Anatomy in the same institution, Pathologist to Harper Hospital, and Surgeon to Out-Door Department of Children's Free Hospital, and Medical Examiner and Adviser for several of the leading life insurance companies of this country. Dr. McLean is an active member of the Detroit Medical and Library Association, and American Medical Association.

**McNARY, Hugh F.**, of Princeton, Kentucky, was born there January 15, 1837. He graduated at Cumberland College, in his native town, and at Harvard Medical College in 1863. He served as nurse in Military Hospitals in Louisville from about December, 1861, to September, 1862. On June 9, 1863, he was appointed Acting Assistant Surgeon United States Army, and continued in the service until August 31, 1865. He did service in several military hospitals in Louisville. He was also on duty at Camp Nelson Field Hospital, and at the large General Hospital at Jeffersonville, Indiana, and remained there until its close in August, 1865. Meantime from the Jefferson General Hospital he was ordered, with the surgeon in charge, Middleton Goldsmith, to go up the Red river to the relief of the Banks' expedition. He was appointed in May, 1867, Assistant Physician to the Western Lunatic Asylum of Kentucky, held the position two years, then returned to his native place, and has been actively engaged in the practice of general medicine since July, 1869, to the present date.

**McNAUGHT, Francis H.**, of Denver, Colorado, was educated in medicine at the College of Physicians and Surgeons, New York City, from which institution he received the degree of M. D. in 1878. His medical education was supplemented by attending the New York Polyclinic, in 1890. He is now Professor of Clinical Medicine in the Gross Medical College, Denver. He is ex-president of the Delaware County Medical Society, New York, and is an active member of the Colorado State Medical Society, Denver Medical Association, and the Arapahoe County Medical Society, Colorado.

**McSHANE, Augustus**, of New Orleans, Louisiana, was educated in medicine at the University of Louisiana, and received the degree of M. D. from that institution in 1882. He is

now Assistant Demonstrator of Anatomy in Tulane University, and Assistant Physician to the Eye, Ear, Nose and Throat Hospital, New Orleans. He is a member of the Orleans Parish Medical Society, Louisiana State Medical Association, and International Medical Congress. Dr. McShane is also proprietor and editor of the *New Orleans Medical and Surgical Journal*, one of the most widely-known publications in the South.

**MACPHATTER, Neil**, of Denver, Colorado, was graduated M. D. at the Trinity Medical College, Toronto, Ontario, and supplemented his medical education by attending the Royal College of Surgeons, Edinburgh, and Faculty of Physicians and Surgeons, Glasgow, Scotland, in 1881. He also became a Licentiate of Midwifery, Edinburgh and Glasgow in the same year. He is now Professor of Gynecology and Abdominal Surgery in the Medical Department of the University of Colorado, Denver. In 1882 he became a member of the College of Physicians and Surgeons, Ontario, member of the Ontario Medical Association, and is now a Fellow of the British Gynecological Society and member of the Colorado State Medical Society, Denver Medical Association and of numerous other medical organizations.

**MAGRUDER, George L.**, of Washington City, D. C., was born in that city November 1, 1848. He is a descendant of Alexander Magruder, who immigrated from Scotland in 1655, and on the maternal side from Henry Morgan, who settled in Maryland prior to 1648, and who was one of Lord Baltimore's commanding officers. He graduated A. B. from Gonzaga College, District of Columbia, in 1868, and M. D. from the Medical Department of the University of Georgetown, in March, 1870, and A. M. from the same university in 1872. He then settled in Washington in general practice. He is a member of the Medical Association and Medical Society of the District of Columbia, also of the Medical Society of the Alumni of Georgetown University. He has been Treasurer of the Medical Association and corresponding secretary of the Medical Society. He was Professor of Chemistry at Gonzaga College, from 1871 to 1873; Professor to Professor of Anatomy, Georgetown University, 1870 to 1873; Lecturer in the summer school in the same institution on Minor Surgery and Bandaging, in 1870-71, and of Chemistry in 1872-73; was one of the Physicians of the Poor of the city from 1871 to 1874; one of the originators of the Central Dispensary of Washington, organized in 1871, and has been in charge of diseases of children and president of its attending staff; also Physician to Gonzaga College and Home for the Aged. Dr. Magruder is now Dean and treasurer of the Medical Department of Georgetown University and *Emeritus* Professor of Materia Medica and Therapeutics in that institution; member of the Consulting Staff of Providence and the Emergency Hospitals and Consulting Physician to Georgetown University.

**MAIRE, Lewis E.**, of Detroit, Michigan, was graduated at the Detroit Medical College in 1881, and supplemented his medical education and training by attendance at the New York Post-Graduate Medical School and Hospital in 1888. He is now Professor of Ophthalmology and Otology in the Michigan College of Medicine and Surgery, Ophthalmic Surgeon to Emergency Hospital, and Surgeon for the Wa-

bash Railway Company. He is a member of the American Medical Association, Michigan State Medical Society, Detroit Academy of Medicine, and other leading medical organizations of that city.

**MANN, Matthew Derbyshire**, of Buffalo, New York, was born in Utica, New York, July 12, 1845. He is of old New England stock, except on the side of his maternal grandmother, who was English. His father, Charles A. Mann, was a prominent lawyer in Utica. He was educated in the common schools of his native city until 1861, when he went abroad, spending nearly two years in travel in Europe. Returning in 1863, he entered Yale College, graduating with honors in 1867, and receiving his degree of A. M. in 1870. After a few months spent in travel in the West he began the study of medicine in the office of his uncle, Dr. M. M. Bagg, of Utica, New York, attending his first course of lectures in the spring of 1868 in the Long Island Medical College. The following winter he entered the College of Physicians and Surgeons in New York, where he graduated in 1871. His thesis on graduation received honorable mention. In the fall of 1870 he entered the new Stranger Hospital as *Interne* on the first staff. He served there with credit for one year. In that hospital he came under the influence of Dr. T. G. Thomas, a fact which doubtless had much to do with shaping his future career. Having finished his service in the hospital in 1871 he went to Europe. While there he studied in Paris and London for a while, spent several months with Simon and Arnold in Heidelberg, and seven months in Vienna studying obstetrics under Carl Braun and pathology under Kundeat. He also spent some time in travel, visiting Germany, Switzerland and Italy, as well as Constantinople and the East. Returning to New York in 1873 he began practice in that metropolis. He was soon appointed to several dispensary positions, and also as instructor in the College of Physicians and Surgeons. After a residence of six years in New York he removed with his family to Hartford, Connecticut, in 1879. During these six years in New York he devoted himself largely to the study of pathology and gynecology. On beginning practice in Hartford he gave up all general work and devoted himself solely to the diseases of women. In 1880 he was appointed Clinical Lecturer on Gynecology in the Medical Department of Yale College, which position he held for two years. In 1882, on the death of Dr. James P. White, he was called to the chair of Obstetrics and Gynecology in the Medical Department of the University of Buffalo. He was also appointed Gynecologist to the Buffalo General Hospital, and later Obstetrician to the same. In Buffalo he has limited himself in his practice to gynecology, abdominal surgery and consultations in obstetrics. In abdominal surgery he has performed over five hundred operations, his mortality after the first hundred, which were done in the pre-antiseptic days, being about five per cent. While in New York he was an active member of the New York Obstetrical Society, and its Secretary and Pathologist. He has also been an active member of the American Gynecological Society, contributing several papers to its Transactions. His principal literary work was the editing of the "American System of Gynecology." He has been a frequent contributor

to medical periodicals. His paper (1874) on his "Immediate Treatment of Rupture of the Perineum" was about the first publication on this subject in this country. He married, in 1869, Elizabeth Pope, of St. Paul, Minnesota. They have seven children.

**MARBOURG, Edgar M.**, of Pueblo, Colorado, was graduated M. D. at the Jefferson Medical College, Philadelphia, in 1885, since which he has devoted special attention to diseases of the eye and ear, and was formerly Clinical Assistant to the Ophthalmic and Aural Department of Germantown Hospital. He is now Oculist and Aurist for the Denver and Rio Grande Railway Company, Colorado State Insane Asylum, Colorado State Blind Asylum and Woman's Hospital, Pueblo. Dr. Marbourg is an active member of the American Medical Association, National Association of Railway Surgeons, Colorado State Medical Society, and is also a member and secretary of the Pueblo County Medical Society.

**MARVIN, Joseph Benson**, of Louisville, Kentucky, was born in Monticello, Florida, August 3, 1852. In 1870 he was graduated from the Virginia Military Institute, and was for three years subsequent to graduation Assistant Professor of Chemistry in that institution; he then entered the Medical Department of the Central University of Louisville, Kentucky, and was graduated thence M. D. in March, 1875. In the same year he established himself in practice in Louisville, making specialties of the diseases of the nervous system and of medical microscopy. He is a member of the Kentucky State Medical Society, of the Louisville Academy of Medicine, and the Louisville Microscopical Society, and has been secretary and president of the last two organizations, respectively. In 1874 he was chosen Professor of Medical Chemistry and Toxicology, and Clinical Lecturer on Nervous Diseases in the Louisville Hospital College of Medicine.

**MASSEY, G. Betton**, of Philadelphia, Pa., was educated in medicine at the University of Pennsylvania, and received the degree of M. D. from that institution in 1876. He is now Physician-in-Charge of the Sanitarium for the Treatment of Diseases of Women and Diseases of the Nervous System, Gynecologist to Howard Hospital, and member of the Philadelphia Obstetrical Society, as well as other medical organizations of that city. He is also a member of the American Neurological Association, and ex-president of the American Electro-Therapeutic Association. He has devised important instruments for the application of electricity in his special field of practice, and is the author of a recent work entitled "Electricity in Diseases of Women."

**MAXWELL, James Darwin**, of Bloomington, Indiana, was born at Hanover, Indiana, May 19, 1815, and died September 30, 1892. His father, Dr. David H. Maxwell, moved to Bloomington, in 1819. He came to that city because it was high ground, and considered very healthful, and because a township had been donated at that point by Congress for a State University, while the State was yet a territory. Here the son was reared. At the age of nineteen, in 1833, he graduated at the State Seminary, and the following year became a tutor in the school. In 1836 he went to

Mississippi State College as a teacher, where he remained one year as Professor of Latin. The school closed its doors for the want of funds, and with a watch in his pocket as his only pay for his year's work, he returned to Bloomington, and began the study of medicine with his father. In the winter of 1840-41 he attended the Transylvania Medical College, at Lexington, Kentucky, where Dr. Dudley was one of the illustrious Faculty. The following year he practiced medicine with his father, and then attended the Jefferson Medical College, graduating with the Class of 1844. He then returned to Bloomington and continued the practice to within a year of his death. Dr. Maxwell was the oldest living graduate of Indiana University, except one, Judge Andrew Wylie, of Washington City, D. C. Dr. David H. Maxwell, the father, was officially connected with the Indiana University as the first president of its board of trustees, up to the time of his death, a period of more than thirty years, and died in office. The son, Dr. James D. Maxwell, was officially connected with the board seventeen years as secretary, and thirty-two years as a member of the board, making their combined service more than seventy-nine years. No one, except it be his father, ever gave so fully and unselfishly of his time, his energy and his talent to the service of his State in promoting the interest of the university. He bore its affairs upon his heart; its reverses were to him a personal sorrow; its prosperity was his delight. Dr. Maxwell was a very busy practitioner for fifty years. He endured a great many hardships, pursuing his professional work in the early times, when the country was sparsely settled. He had an iron constitution, and had remarked that his vital trinity—lungs, heart and stomach—were unusually strong. The cause of his death was epithelioma of the face. A severe septic chill occurred a few days before his death; collapse and a semi-comatose condition followed the chill. Although often urged to enter political life, he steadily refused, so firmly was he wedded to his profession. No man in Monroe county was more favorably or generally known. For many years he was one of the most prominent and useful physicians of Southern Indiana, excelling especially in diagnosis. He was highly regarded both as a friend and physician, and his acknowledged skill and cool judgment made him a desirable man at the bedside of the sick or despondent. In 1843 he married Louisa J. Howe, who, with nine children, survives him; one only of the entire family having died, his third son, Dr. James D. Maxwell, Jr., who died January 6, 1891, at the age of forty, after having acquired a lucrative practice, and the highest esteem of the community of Bloomington and the surrounding country.

**MAXWELL, Philip**, of Chicago, Illinois, was born in Guilford, Vermont, April 3, 1799, and died at Lake Geneva, Wisconsin, November 5, 1859. He acquired a good general education, subsequently became a graduate in medicine and commenced practice in Sackett's Harbor, New York. He was soon after elected a member of the legislature in that State, and after serving in that capacity he received the appointment of Assistant Surgeon United States Army. He was ordered to Chicago, where he arrived February 3, 1833, and entered directly upon his duties as the medical officer at Fort Dearborn; in which position he re-

mained until the fort was finally abandoned as a military post in December, 1836. In July, 1838, he was promoted to the rank of Surgeon, and subsequently served in the division of the army commanded by General Zachary Taylor in the campaign against the Indians in Florida. He resigned his position in the medical corps of the army soon afterwards, and again took up his residence in Chicago in 1844, where he entered upon the general practice of his profession. He speedily acquired a good practice, took a high social position and became fully identified with all the more important interests of the young and growing city. Of commanding personal appearance, tall, with broad shoulders, portly, always urbane and genial in manner, carrying a head and face expressive of a high order of intelligence, frankness and kindness, he occupied a conspicuous place and exercised an important influence in the social and business circles of his city. In 1848 he formed a partnership in practice with Dr. Brock McVicker, then a young man, and about that time he was elected and served one term in the Representative branch of the Illinois Legislature. A few years later he moved with his family to a beautiful country residence on the borders of Geneva Lake, in Wisconsin, where he departed from this world at the age of sixty years.

**MEACHEM, John G.**, of Racine, Wisconsin, was born at Axbridge, Somerset, England, May 27, 1823. He was educated under the tutelage of his father, the Rev. Thomas Meachem, at the Academies of Canandaigua, New York, and Richmond, and at the Castleton, Vermont, Medical College; he graduated M. D. from the last-named institution in 1843. In 1862 he also received the degree of M. D. from the Bellevue Hospital Medical College. From 1843 to 1862 he practiced in New York, at Weathersfield, Bethany, and Warsaw, and since 1862 has been in practice at Racine. He married, June 25, 1844, Myraette, daughter of the late Reuben Doolittle, of Weathersfield, New York, and sister of Senator J. R. Doolittle, of Wisconsin. Among his notable cases have been lithotomy, ovariectomy, ligation of the common carotid for large occipital aneurism, and other capital operations. While a resident in New York he was a member of the Wyoming County Medical Society, serving for four years as its president, and for eight years as its secretary. In 1862 he was appointed Enrolling Surgeon for Wyoming District, New York; served in 1863 as Surgeon to Camp Utley. He is one of the founders and for twenty years one of the Surgeons to St. Luke's Hospital, Racine; Physician to St. Catherine's Convent and Taylor Orphan Asylum. He is a member of the Racine Medical Society, of which he has served two years as president and five years as secretary. He is also a member and ex-president of the Wisconsin State Medical Society and member of the American Medical Association. He is Medical Examiner for several of the leading life and accident insurance companies of the United States. In April, 1876, he was elected Mayor of Racine. He has been an active member of the Episcopal Church, having served as a member of the standing committee of the Diocese of Wisconsin, and of the Missionary Board; was warden of Trinity Church, Warsaw, New York, for eight years, and senior warden of St. Luke's Church, Racine, which office he has held for many years.

Among his published papers are articles treating of "Ligation of the Carotid," "Medical Education," "Strumo-Syphilis" and "Insanity Produced by Bronchial Disease."

**MERRICK, Samuel K.**, of Baltimore, Maryland, was educated in medicine at the University of Maryland, and received the degree of M. D. from that institution in 1872. He is now Professor of Diseases of the Nose, Throat and Chest in the Baltimore Medical College, and Chief of the Throat and Chest Clinic in the Northwestern Dispensary. Dr. Merrick is an active member of the Medico-Chirurgical Faculty of Maryland, Medical and Surgical Society of Baltimore, and of all other leading medical organizations of that city.

**MILES, Albert B.**, of New Orleans, Louisiana, was educated in medicine at the University of Louisiana, New Orleans, and received the degree of M. D. from that institution in 1875. He is an active member of the Orleans Parish Medical Society, Louisiana State Medical Association, and Southern Surgical and Gynecological Association. He is also Professor of Materia Medica and Therapeutics in the University of Louisiana, and House Surgeon of Charity Hospital.

**MILLER, Albert E.**, of Boston, Massachusetts, was educated in medicine at the University of Pennsylvania, and received the degree of M. D. from that institution in 1864. He is now Popular Lecturer on Physiology, Hygiene and Public Health, late member of the Legislature of Massachusetts, and chairman of the Committee on Public Health. He is Medical Examiner for the Pennsylvania Mutual Life Insurance Company. Dr. Miller is also a member of the Gynecological Society of Boston, and the International Medical Congress.

**MILLER, De Laskie**, of Chicago, Illinois, was born in Niagara county, New York, May 29, 1818. His early life was passed on his father's farm, his elementary education being obtained at the village school during winter time. At eighteen years of age he began to teach school, and having chosen the profession of medicine he at the same time entered upon its study under the guidance of Dr. Thomas G. Catlin, of the city of Brooklyn. He graduated at Geneva Medical College in 1842, and commenced practice in Lockport. Remaining there, however, for a short time only, he removed to Flint, Michigan. Here he practiced for several years, and identified himself thoroughly with all questions of public improvement and educational development. From Flint he removed, in 1852, to Chicago. In 1859 he was called to fill the chair of Obstetrics and diseases of Women and Children in the Rush Medical College, a position he continued to fill for many years and is now *Emeritus* Professor of Obstetrics and Diseases of Women and Children in that institution. In 1863 he undertook a journey to Europe for the express purpose of procuring material for illustrating his lectures, and soon after became the most eminent teacher of his specialty in the Northwest. He has long been connected with St. Luke's Hospital as Obstetrician, and as Consulting Physician of the Woman's Hospital of the State of Illinois. He is a member of the Illinois State Medical Society and other leading medical organizations.

**MILLER, Truman W.**, of Chicago, Illinois, was graduated M. D. at the Geneva Medical College, Geneva, New York, in 1868. He is

now Professor of Surgery in the Chicago Poly-clinic, Surgeon-in-Charge of Augusta Hospital and Maurice Porter Hospital, Chicago; Medical Referee and Expert Examiner for the Mutual Life Insurance Company, New York, and Surgeon for several important railway companies in the Northwest. Dr. Miller is a member of the International Medical Congress, American Medical Association, Illinois State Medical Society, Chicago Medical, and of numerous other medical organizations in the city of his residence.

**MINOT, Francis**, of Boston, Massachusetts, was born in that city, April 12, 1821. He was educated at Harvard University, receiving therefrom the degree of A. M., and from the medical department of that institution the degree of M. D. in 1845. He was Visiting Physician to Massachusetts General Hospital from 1858 until 1887, and Hersey Professor of Theory and Practice of Physic in Harvard University from 1874 until 1891. Dr. Minot is now Consulting Physician to Massachusetts General Hospital, and to the Boston Lying-in Hospital, and is one of the oldest and most highly esteemed members of the medical profession in his native city.

**MITCHELL, John Patton**, of Clarksville, Arkansas, was born July 24, 1834, in Culpeper county, Virginia. He was educated at the University of Virginia, and graduated from the Jefferson Medical College in March, 1858, settling in Wytte county, Virginia, whence he removed, in December, 1859, to Clarksville, his present place of residence. During the Civil War he served for one year as a captain in the Confederate army, and afterward as a surgeon to the close of the war, surrendering with the Confederate forces in North Carolina in 1865. Among his notable cases may be mentioned one of a Confederate soldier across the middle of whose forehead a piece of shell had ploughed its way, breaking up nearly the whole of the frontal bone into small fragments, detaching the orbital plates, and occasioning a loss of not less than forty grains of the brain: the patient, on the removal of the fragments and the cleansing and dressing of the wound, recovering consciousness, and rapidly recovering strength and health, without loss of sight or serious impairment of mind. Dr. Mitchell is one of the oldest and one of the most successful physicians and surgeons in the State of Arkansas. He is a member of the Arkansas Medical Society, of which he was elected vice-president in May, 1876. He has been a frequent contributor to medical journals. For a number of years he has taken much interest in educational affairs, and has been a school director in the city of Clarksville.

**MIXTER, Samuel J.**, of Boston, Massachusetts, was graduated M. D. at Harvard Medical School in 1879. He is now Demonstrator of Anatomy in the same institution, Surgeon to Carney Hospital Out-Patients, to Massachusetts General Hospital, and Consulting Surgeon to Massachusetts Charitable Eye and Ear Infirmary. He is an active member of the Massachusetts Medical Society, Boston Academy of Medical Sciences and of other leading medical and scientific organizations of that city.

**MOFFETT, Edward Davis**, of Indianapolis, Indiana, was born March 7, 1862, near Rushville, in the same State. He is a son of Theophilus Moffett and Gabriella (Maxwell) Moffett, and is of Scotch-Irish descent. His early

education was received in common schools and Rushville Academy. He labored on a farm, when out of school, until twenty years of age. He then began the study of medicine, under the preceptorship of his uncle, Dr. John Moffett, one of the distinguished pioneer physicians of Rush county, Indiana. In 1883 he entered the Central College of Physicians and Surgeons, Indianapolis, from which institution he was graduated M. D. with the highest honors of his class in 1886. Upon receiving his medical degree he passed the most successful competitive examination for positions in the City Dispensary and City Hospital, and having first choice, served one year as *Interne* in the latter institution. In 1887 he established himself in the city of his present residence,

*Edward D. Moffett.*

where he has since been engaged in a successful general practice of his profession. From 1887 to 1889 he was Lecturer on Anatomy in the Central College of Physicians and Surgeons, and then became assistant to the chair of Obstetrics in that institution, a position he now holds. In 1891-92 he was Lecturer on *Materia Medica* and Therapeutics in the Indiana Dental College, which was the first course of instruction on that branch of medical science delivered in that institution. In 1893, Dr. Moffett was elected Superintendent of the City Dispensary, a position he now holds. He is a member and ex-secretary of the Marion County Medical Society, and is also a member of the Indiana State Medical Society and American Medical Association. His contributions to professional literature consist of papers and reports which have been read before the medical organizations with which he is connected.

**MONCRIEFF, D. Scott**, of Portland, Oregon, was born in Edinburgh, Scotland, February 9, 1865, and was drowned in the Gulf of Tartary in the summer of 1893. He was the younger son of D. Scott Moncrieff, Esq., of Edinburgh. He was educated at the principal

schools and colleges in Great Britain, having also passed a two years' course at Leipsic, Germany. He also took his M. D. degree at Harvard in 1889. He was an apt student, and came out of his studies with flying colors. Dr. Moncrieff was a good athlete, and obtained many prizes while pursuing his studies. He held the Royal Humane Society's medal for saving a man's life who had fallen overboard while the steamer was about to sail. His professional career started in with his appointment as Surgeon to the Anchor Line Steamer "Armenia," plying between England and Calcutta. He next acted as Surgeon on the "Ethiopia," of the same line, which sailed between Glasgow and New York. From there he was appointed as Surgeon in the Northwest Mounted Police in Canada. Leaving that place Dr. Moncrieff went to Portland, Oregon, and soon after he was appointed as Acting Assistant Surgeon to the Fourth Cavalry Regiment, stationed at Walla Walla. While here he did a great deal of important work among the Indians at the different reservations. Last, he was requested by Professor Putnam, Chief of the Department of Ethnology at the World's Fair, to go to Siberia to gather statistics and study the habits of the natives of Kamschatka. He received a special passport from the Secretary of State, besides several influential letters from important officers of the Russian Government in this country. Dr. Moncrieff left on the steamer "Kotic," in May of 1893, and reached Vladivostock, where he met with a royal reception from the people, besides receiving every assistance in his work. Everything pointed to a successful termination of his mission when his young life was suddenly cut short. The news was received in this country with much regret, as Dr. Moncrieff was a favorite with every one that came in contact with him. He was an exceedingly bright, scientific young man, and very able in his profession, being Assistant Professor of Theory and Practice of Medicine in the Medical Department of the University of Oregon.

**MOORE, James Edward**, of Minneapolis, Minnesota, was born at Clarksville, Mercer county, Pennsylvania, March 2, 1852. His father, Rev. George W. Moore, a Methodist minister, was of Scotch-Irish and his mother was of German descent. Dr. Moore attended the public schools of Pennsylvania until he was fifteen, when he went to Poland Union Seminary, at Poland, Ohio, where he remained three years. He then attended the University of Michigan for one year, after which he entered Bellevue Hospital Medical College, where he graduated in 1873. Immediately afterward he located at Fort Wayne, Indiana, where he remained for two years and a half. He then returned to New York City, where he continued to study and walk the hospitals for seven months. He then located in Emlenton, Pennsylvania. After six busy and profitable years' practice in this location, he felt the need of a larger field of work, and in August, 1882, removed to Minneapolis, where he has enjoyed a busy practice from the very first. Since his graduation, the doctor has spent over four years in the colleges and hospitals of New York and Philadelphia. In 1885 he went abroad, spending the greater part of a year in Berlin and London Hospitals. The whole aim of his career has been to become a competent surgeon, and since the fall of 1887 he has

confined his practice exclusively to that branch. During the past few years he has been a constant contributor to various medical journals. In 1885 he was appointed Professor of Orthopedic Surgery in the Minnesota Hospital College, and was later appointed to the same chair in the St. Paul Medical College. In 1889 he was elected to the same chair in the Medical Department of the University of Minnesota, which position he still holds. He is Orthopedic Surgeon to St. Mary's and Asbury Methodist Hospitals, Surgeon-in-Charge of St. Barnabas Hospital, and Surgeon to the Northwestern Hospital for Women and Children, all of Minneapolis. He is an active member of all the leading local, State, and national medical societies.

**MOORE, Richard Channing**, of Omaha, Nebraska, was born at Quincy, Illinois, November 25, 1841. His professional education was received in the Chicago Medical College, whence he was graduated in March, 1865. In the ensuing September he established himself in Omaha, where he has since remained engaged in an active and successful practice of general medicine and surgery, but in recent years has given particular attention to pediatrics. In 1864 he was appointed an Acting Assistant Surgeon of United States Volunteers, and was attached to the hospital steamer D. A. January, plying on the Mississippi and Ohio rivers. He married, November 17, 1868, Eliza B., daughter of Christopher Bushnell, Esq., of Westbrook, Connecticut. Of his more important cases may be mentioned treatment of pulmonary abscess by aspiration, recovery, and case of John Thomson, scalped by Indians on the line of the Northern Pacific Railroad, in 1868, recovery, with complete exfoliation of external table of skull. He is a member of the Nebraska State Medical Society and of the Omaha Pathological and Sanitary Society; treasurer of the latter in 1877, and vice-president of the Omaha Medical Society in 1874. His professional publications have appeared in the Transactions of the Nebraska State Society, and have included reports upon ophthalmology and otology. He has been City Physician to Omaha, a member of the Omaha Board of Health, and Examining Surgeon to the United States Pension Bureau. Dr. Moore is now Professor of Diseases of Children in Omaha Medical College.

**MORGAN, William V.**, of Indianapolis, Indiana, was born March 24, 1853, in Johnson county, Indiana. His father, Ezekiel W. Morgan, was one of the pioneers and early successful educators of that State. Later in life he was a merchant and stock dealer, and was honored by his fellow-citizens in repeated election as County Commissioner, and other important official positions. The early education of the subject of this sketch was acquired at the common schools of his native county, and by three years attendance at Nineveh High School, and in 1869, at the age of sixteen, he entered the State University at Bloomington. From there he transferred his studies to the Northwestern (now Butler) University, Indianapolis, where he remained a student from 1870 until 1872. In 1873 he entered St. Louis Medical College, where he pursued a general course of study in medicine and surgery. His studies were directed in chief by the illustrious Professor Hodgken, at that day recognized as one of the

greatest surgeons in the Mississippi Valley. Dr. Morgan enjoyed exceptional advantages in having the friendship and training of this eminent surgeon and teacher, and from him he imbibed the spirit of surgical invention as well as the determination to make himself thoroughly proficient in the knowledge and skill requisite in that field of professional practice. He was graduated M. D. with the highest honors of his class in 1875. In the year following he established himself at Julietta, a town surrounded by a wealthy farming community a few miles east of the city of his present residence. He here pursued a successful general practice of medicine and surgery, which soon extended to surrounding towns and into adjoining counties. He moved to Indianapolis in 1886, in response to a call to take the chair of Anatomy in the Central College of Physicians and Surgeons, and two years later was promoted to the chair of Surgical Anatomy and Fractures and Dislocations, a position which he still retains. The title of Dr. Morgan's professorship is the same as that of the chair filled by his distinguished preceptor, Hodgken, at St. Louis, in his lifetime. He is Consulting Surgeon to the Indianapolis City Hospital and to the City Dispensary. He has a growing reputation in mechanical surgery, and is the originator and inventor of a number of surgical instruments of recognized merit, among which may be mentioned his "Trajector," for determining the depth and location of the bullet in gunshot wounds of the skull; a modification of Hodgken's "Extension Apparatus" for fractures of the femur, and his "Goniometer," an instrument of great value in determining the angle of deformity and the shape of the wedge to be removed in straightening bones, all of which are made by Wm. H. Armstrong & Co., of his city. Dr. Morgan has also developed some important ideas in the treatment of spinal deformities, and also in the application of electricity in surgery, and has originated a number of appliances in this connection. He is a member of the Judicial Council of the Marion County Medical Society; has belonged to that organization for the past fifteen years. He is also a member of the Indianapolis Surgical Society, of the Indiana State Medical Society and of the American Medical Association. Dr. Morgan is a man of pleasing address and in the prime of life and health. He is not only a close student, but a steady worker in carrying the results of his studies into the field of practice. He was married, November 9, 1875, to Miss Amelia Menges, a daughter of J. J. Menges, a prominent railway official and banker of St. Louis, Missouri.

**MOUSER, Silas Mercer**, of San Francisco, California, was born in Shenandoah county, Virginia, May 7, 1823, and is of German extraction, his grandparents having emigrated from Germany to this country at an early date. He was educated primarily at the public schools of Virginia and Ohio; in 1847 he graduated at Willoughby Medical College, and in 1848 at Starling Medical College, Columbus, Ohio. His first place of settlement was at Mt. Gilead, in the same State, where he entered upon the practice of his profession; in 1850 he settled in Sacramento, California, remaining there until 1862, the date of his removal to San Francisco, where he has since resided. Although a general practitioner, he has de-

voted much time to obstetrics and diseases of women and children. He was a member of the first county medical society organized in Sacramento, California, 1856; a member of the first California State medical society, organized March 12, 1856; united himself with the San Francisco County Medical Society in 1873, and joined the San Francisco Microscopical Society in the same year. For many years he was Physician to the Ladies' Protection and Relief Society of San Francisco, a charity supported by voluntary contribution, and the guardian of about two hundred children.

**MUNN, William P.**, of Denver, Colorado, was graduated M. D. at the Medical Department of the University of Michigan in 1886. He is now Professor of Genito-Urinary Diseases and Clinical Surgery in the Medical Department of the University of Denver; Physician in charge of City Hospital for Contagious Diseases, and Assistant Health Commissioner for Denver City. Dr. Munn is an active member of the American Medical Association, Colorado State Medical Society, Denver Medical Association, and is secretary of the Denver Medico-Legal Society. He is also a member of all the other important medical organizations of that city.

**MURFREE, James Brickell**, of Murfreesboro, Tennessee, of Irish-French descent, was born at Murfreesboro, September 16, 1835. He received his preparatory education at Irving College and at Union University, graduating A. M. from the latter, he attended one course of lectures in the Medical Department of the University of Nashville, and two courses at Jefferson Medical College, and in March 1859, received from the last-named institution his degree of M. D. Upon graduating in medicine he established himself in his native town, engaging in a general practice, but giving special attention to surgery, and has performed various capital operations. In May, 1861, he enlisted in the Confederate States Army, was appointed assistant surgeon in the same year, was promoted to be surgeon in July, 1862, and in the latter capacity served during the remainder of the Civil War. He is a member of the Rutherford County Medical Society and secretary, in 1865, of the Tennessee State Medical Society, president in 1874, and of the American Medical Association. Of his professional publications may be mentioned papers upon "Blood-Letting," "Diphtheria," "Cholera," and "Syphilis;" reports of a case of "Lumbar Abscess and of Amputation of the Hip-Joint," and an address before the Tennessee State Medical Society, on "Conservative Medicine."

**NEELY, Eugene A.**, of Memphis, Tennessee, was educated in medicine at the Memphis Hospital Medical College, from which institution he received the degree of M. D. in 1886. He is a member of the Tri-State Medical Society of Tennessee, Georgia and Alabama, member of the Mississippi State Medical Society, Memphis Medical Society and National Association of Railway Surgeons. He was formerly Professor of Clinical Medicine in the Memphis Hospital Medical College.

**NEWLAND, Henry**, of St. Louis, Missouri, was educated at the Royal University of Berlin, Germany, from which institution he received the degree of M. D. in 1854. He is now Professor of Obstetrics and Resident Physician of the Lying-in Institute, and Dean of the

Faculty of Newland's College of Midwifery. Dr. Newland is an active member of the St. Louis Medical Society and the Mississippi Valley Medical Association.

**NIXON, William Goodwyn**, of Uniontown, Alabama, was born in Holmes county, Mississippi, December 20, 1834. His father, Dr. J. D. Nixon, formerly from Petersburg, Virginia—a graduate of Transylvania Medical College, Lexington, Kentucky—moved to Montgomery, Alabama, in 1839, and shortly afterwards settled near Lowndesboro, Alabama, where the subject of this sketch received his elementary education. He was sent from there to Howard College, at Marion, in the same State, and remaining there but a short while was sent to Mt. Zion College, Winnsboro, South Carolina, where he received his education under the teachings of the educators who composed the

*W. Nixon*

excellent faculty in the years 1850 to 1852. Returning home, he was placed in the office of Dr. Charles T. Quintard, at Memphis, (now Bishop of Tennessee), and attended his first course of lectures in the Memphis Medical College. Going from there to Philadelphia he entered the University of Pennsylvania, where he received his diploma, before his majority, in March, 1855. Returning to Lowndesboro, he commenced the practice of medicine. Inheriting property, he removed to Mississippi and engaged for a time in planting. During the years from 1861 to 1865 he served in the Confederate Army with the rank of Captain. At the close of the war he settled near Uniontown, where he has continuously resided, engaged in the general practice of medicine. He is a communicant in the Protestant Episcopal Church, and has been married twice. He has ever been and is still fond of books and study, and has written occasionally for the medical journals. Being of a quiet, retiring disposition, he enjoys his home and the charms which surround it, but is an active member of his county medical society, and an accomplished and highly

esteemed physician. Although he has never accumulated wealth by the practice of medicine, yet the vast benefit and relief that he has been enabled to confer on suffering humanity are such as render him well satisfied in his chosen profession.

**NOBLE, Charles P.**, of Philadelphia, Pa., was educated in medicine at the University of Maryland, Baltimore, from which institution he was graduated M. D. in 1884, since which time he has devoted special attention to diseases of women, and is now Surgeon-in-Charge of the Kensington Hospital for Women. Dr. Noble is a member of the American Gynecological Society, and Fellow of the College of Physicians, Philadelphia.

**O'DWYER, Joseph**, of New York City, was educated in medicine at the College of Physicians and Surgeons, New York, from which institution he received the degree of M. D. in 1866. He is now Professor of Diseases of Children in the New York Post-Graduate Medical School and Hospital, Consulting Physician to Willard Parker Hospital, and Visiting Physician to the New York Foundling Hospital. He is an active member of the New York Academy of Medicine, New York Medical Society, and Congress of American Physicians and Surgeons.

**OLIVER, John C.**, of Cincinnati, Ohio, was graduated M. D. at the Miami Medical College, Cincinnati, in 1885. He is now Microscopist to the Cincinnati Hospital, Clinical Lecturer on Diseases of Children in the Miami Medical College, secretary of the Miami Medical College Alumni Association and member of the American Medical Association, as well as of numerous other medical and scientific organizations.

**OPPENHEIMER, Henry S.**, of New York City, was educated in medicine at the College of Physicians and Surgeons, New York City, and received the degree of M. D. from that institution in 1876. He is now Examiner of the Blind for the City of New York, Oculist to the German Poliklinik, Montefiore Home and St. Mark's Hospital. Dr. Oppenheimer is President of the New York Ophthalmological Society, member of the New York State Medical Association, American Ophthalmological Society, Congress of American Physicians and Surgeons, the International Medical Congress and other medical and scientific organizations.

**ORD, James Lycurgus**, of Fort Bowie, Arizona, was born in Washington, D. C., and graduated in medicine at Jefferson Medical College in 1846. During the same year he was appointed Acting Assistant Surgeon United States Army and served during the Mexican War in California. "On July 14, 1846, he sailed in the ship Lexington from New York for the Pacific Coast with the company E, Third Artillery, with Capt. C. T. Tompkins in command. They were six months in making the voyage, stopping at Rio Janeiro and Valparaiso about a week for water and fresh provisions, reached Monterey, California, January 27, 1847, where they landed and took possession of Monterey and the Block House, retaining the sailors and marines, who were boarded on shore. Lieutenant Baldwin, late Admiral United States Navy, was in command of the Block House, which overlooked and commanded the town. Lieutenant Maddox was in command of the marines and occupied the old barracks

(quartel) that had been used as quarters by the Mexican troops. He remained at Monterey for one year, doing duty with Dr. Robert Murray, recently retired as surgeon-general. He was then ordered to Santa Barbara, where he remained until October, and was mustered out of service." He again entered the army in 1862, and did duty with the California volunteers who were stationed at Santa Barbara, under command of Lieutenant-Colonel Olney, for about six months. Then again, in 1879, entered the service and did duty as post surgeon at Fort Winfield Scott for over a year, then was ordered to Arizona in March, 1880, and was in the field with the Sixth Cavalry and First Infantry, which had a skirmish with Victorio, the Indian chief of the Apaches, at Sterns' ranch, midway between Forts Thomas and Apache. This was the last raid that Victorio made, as he was driven into Mexico and killed by the Mexicans while trying to escape from the American troops. His first post in Arizona was Fort Grant, then in the field, then for a short time at Camp Rucker, near the stronghold of the Apache Chief Cochise, then for nearly two years at Fort Bowie as Post Surgeon, thence to Fort Mohane, on the Colorado river, 300 miles north of Fort Yuma, which was considered to be the hottest place on this continent. It is the center of the deserts of Arizona, and is even believed to be the hottest place in the world except Aden on the Red Sea, the entrance of the Suez Canal. From the former place the story was told that one of the men died and went to "Sheol" and came back to get his blankets, as he found it too cold there without them. Dr. Ord remained on duty at the last mentioned fort five years, and then one year at Fort Thomas on the Gila river, a branch of the Colorado. In 1891 he was again assigned duty at Fort Bowie, and up to that date had the remarkable record of having served in the same capacity in the medical department of the United States Army for a period extending over forty years. If his long and efficient services for the national government have not secured official recognition, his eventful medical career certainly entitles him to be held in kind remembrance by his profession.

**O'REILLY, James**, of New York City, was graduated in medicine at the University of Vermont, in 1875. He is now Professor of Gynecology in the New York College of Midwifery, Consulting Surgeon of the Metropolitan Dispensary, Gynecologist to Woman's Infirmary, Medical Director of Maternity Home, Lecturer on Antiseptic Nursing at Woman's Infirmary Training School, and president of the New York Sanitarium Hospital, and member of numerous medical organizations in New York City.

**OSLER, William**, of Baltimore, Maryland, was educated at McGill University, Montreal, Canada, and received the degree of M. D. from that institution in 1872. He is now Professor of Medicine in Johns Hopkins University and Physician-in-Chief to the Johns Hopkins Hospital, Baltimore. Dr. Osler is a Fellow of the Royal College of Physicians, London, and member of the leading medical organizations of this country. He is the author of a recent text-book, published by D. Appleton & Co., New York, entitled, "The Principles and Practice of Medicine," designed for the use of practitioners and students of medicine, which is

based on the extensive experience of Dr. Osler in hospital and private practice. In regard to this work a prominent critic has said: "In design it is comprehensive; in classification it is elaborate; in a word, the subject is so compactly and yet so clearly treated, and the whole is brought so thoroughly in touch with the times, that it deserves to rank as the best treatise on general practice in the English language." The publication has been well received by the general profession, and has met with an extensive sale.

**OUTERBRIDGE, Paul**, of New York City, was educated in medicine at the University of Vermont, at Burlington, from which institution he received the degree of M. D. in 1884. He is now attending Surgeon to the New York Cancer Hospital, Assistant Surgeon to Woman's Hospital, Attending Gynecologist to Demilt Dispensary, and an active member of the New York Obstetrical Society.

**PAGE, Lafayette F.**, of Indianapolis, Indiana, was born at Columbia, Kentucky, May 21, 1863. He is a son of Robert and Mary (Irving) Page, natives of Charlottesville, Vir-

*Lafayette F. Page.*

ginia. His father was a business man of prominence. Dr. Page was educated privately and at the public schools of his native town, and later pursued a classical course at Columbia College, there obtaining the degree of A. B. For two years he was teacher of higher mathematics in Kentucky, and for one year afterward in Texas. In 1885 he removed to Louisville and began the study of medicine at the Louisville University (Medical Department). After taking the first course of lectures he went to Indianapolis and entered the Indiana Medical College, from which he received the degree of M. D. in 1887, and was awarded the "Mears Gold Medal" as a mark of special honor. At the same time he entered a competitive examination for the position of *Interne* at the City Dispensary and secured the appointment for one year. He then began the

general practice of his profession which he pursued with increasing success for two years, and then devoted special attention to diseases of the nose, throat and ear, including catarrhal, bronchial and allied ailments. Later he took two post-graduate courses at New York, with the end in view of perfecting himself in a knowledge of the pathology and treatment of the class of diseases above mentioned, to which he has given almost exclusive attention since 1890. Though still a young man, he has gained a reputation in this line of practice which has made him favorably and widely known for his skill and success. Dr. Page was formerly Visiting Physician to Marion County Asylum, and is now Consulting Physician for Diseases of the Throat, Nose and Ear to the City Dispensary. He is a member of the Marion County Medical Society, Indiana State Medical Society, Mississippi Valley Medical Association and American Medical Association. He has made important contributions to the literature of his chosen field of practice, and a recent article upon "Hay Fever," read before the Mississippi Medical Association in October, 1893, has been widely published and is worthy of special mention.

**PAGE, Richard C. M.**, of New York City, was educated in medicine at the University of Virginia, from which institution he received the degree of M. D. in 1867. His professional studies were supplemented by attendance at the University of the City of New York, and from that institution he received an *ad eundem* degree in 1868. He is now Professor of General Medicine and Diseases of the Chest in the New York Polyclinic. He is vice-president of the New York Academy of Medicine, and an active member of other medical and scientific organizations. He is the author of a "Chart on Diseases of the Chest," a work on "Physical Diagnosis," and "Practice of Medicine." He has also made other important contributions to medical literature.

**PALMER, William Gray**, of Washington City, D. C., was born in Montgomery county, Maryland, in 1823, and died November 23, 1893. Dr. Palmer was one of the oldest practitioners in the District of Columbia, and came of a family of medical men, all of whom attained prominence in the profession. He graduated from the Medical School of the University of Pennsylvania, in 1844, at the age of twenty, settled in Bladensburg, Maryland, and in 1850 began practice in Washington. He was a member of the American Medical Association. He leaves a wife and five children; two sons in Chicago and three daughters in Washington.

**PARKHILL, Clayton**, of Denver, Colorado, was graduated at the Jefferson Medical College, Philadelphia, in 1883, and also from the Pennsylvania School of Anatomy and Surgery during the same year, since which time he has been actively engaged in the general practice of his profession. He is now Professor of Principles and Practice of Surgery and Clinical Surgery in the Medical Department of the University of Colorado, ex-president of the Colorado State Board of Medical Examiners, Surgeon to Deaconess Home and Hospital, and St. Luke's Hospital, Denver, and also Visiting Surgeon to Arapahoe County Hospital. Dr. Parkhill is an active member of the American Anthro-Pometric Society, Association of American Anatomists, Colorado State

Medical Society, Denver Medical Association, Denver Medico-Legal Society, and Denver Clinical and Pathological Society.

**PATTERSON, Amos W.**, of Indianapolis, Indiana, was born in Washington, Daviess county, Indiana, October 17, 1839. He is the only son of the late Rev. Wm. J. Patterson, a native of Pennsylvania, and Jane (Butler) Patterson, daughter of Amos Butler, a pioneer of Brookville, Indiana, and the founder of that noted town. Dr. Patterson was educated at Hanover College, from which institution he graduated in 1863. During the Civil War he was connected with the Examining Surgeon's office at Indianapolis, and was for two years in old St. John's Hospital, at Cincinnati, and began the study of medicine under the preceptorship of Dr. Theophilus Parvin, and W. B. Fletcher, in the former city, after which he entered the Medical College of Ohio, and was graduated M. D. from that institution in 1866. He commenced the practice of medicine in Bartholomew county, Indiana, where he remained one year and then removed to the city of his present residence, where he has been continuously engaged in an extensive and successful practice of general medicine and surgery. He served several years on the staff of the Indianapolis City Hospital, and is a highly esteemed physician, fully identified with the leading thought and medical progress of his city. He is a member of his County and State Medical Societies and of the American Medical Association, in all of which honorable bodies his attainments and skill in his profession are recognized and appreciated. Dr. Patterson was married to Miss Theodora Kiefer, of Miamisburg, Ohio, June 11, 1878. His accomplished wife and one child (his daughter Ruth) complete the family circle of his happy home.

**PEPPER, George**, of Philadelphia, Pa., was born in that city April 1, 1841, and died there September 14, 1872. He was the eldest son of the late Professor William Pepper, and was graduated at the University of Pennsylvania in 1862, and in medicine at the same institution in 1865. "On September 15, 1862, he enlisted as a private in the Sixth Pennsylvania Cavalry, was promoted to a lieutenancy and saw much active service, but was disabled in 1863, and on May 22, of that year, received an honorable discharge. He was chiefly instrumental in founding the Philadelphia Obstetrical Society, and served as its secretary until illness compelled him to resign." He was a member of many professional organizations, and rapidly acquired practice in the branches to which he devoted himself. "His artistic talent, his mechanical ingenuity, his retentive memory, his industry, and devotion to his profession, gave assurance of a career of unusual brilliancy." His contributions to the Proceeding of the societies with which he was connected were numerous and important.

**PERKINS, John W.**, of Kansas City, Missouri, was graduated M. D. at Harvard Medical School, Boston, Massachusetts, in 1886. He is now Professor of Principles and Practice of Surgery and Operative Surgery in the Kansas City Medical College, and Division Surgeon to the Union Pacific Railway Company. He is a member of the Massachusetts State Medical Society, and of the Jackson County Medical Society, State of Missouri.

**PETERSON, Francis Marion**, of Greensboro,

Alabama, has long held high and appropriate rank as a physician and surgeon. James Peterson, his father, was a native of South Carolina, a successful and influential planter and citizen of Pickens county, Alabama, for many years, and was the father of four sons and three daughters. He married a Miss Cox, also a native of South Carolina; both were descended from among well known and well connected families of the Palmetto State. Of their sons only he whose name forms the caption of this brief biography adopted a professional life. Francis M. Peterson received a liberal academic education, and at the early age of eighteen years he became a teacher in an academy in his native county. Three years were spent in this avocation. Predilection led him to the study of medicine. Giving up teaching, he continued his studies at the city of Columbus, Mississippi,

*Francis M. Peterson*

under a private preceptor. In 1845, he attended a course of lectures in the Medical Department of the University of Pennsylvania, attending, also, the Blockley Alms House. In the spring of 1846 he located at Greensboro, Alabama, and at once entered upon the practice of his profession. In this same year he was married to Miss Amanda Shivers, of Greensboro. She bore him three sons, and then passed away in death, in 1858. The oldest of these sons became a very promising physician, but died at the early age of thirty years. The other sons are ministers in the Methodist Episcopal Church, South. In 1861 Dr. Peterson was married a second time, wedding a daughter of Dr. Alexander Sledge, of Greensboro. Three daughters are the issue of this marriage. For a period of over twenty years Dr. Peterson continued in an active, successful, and remunerative practice, then, in response to his indomitable thirst for knowledge, he entered the University of New York, receiving from that institution a diploma in

1869. He immediately resumed his practice at Greensboro. For nearly a half century he has continued an ardent student as well as an active practitioner of medicine and surgery. Since the age of twenty-one years, until a few years ago, Dr. Peterson continued under the instructions of some able tutor in Latin, Greek, French, German, or the higher sciences. Hence, his education in the classics, and sciences, as well as in his profession, is of the highest order. In 1872 he became Professor of *Materia Medica* and *Obstetrics* in the Southern University, at Greensboro, and remained as such until the discontinuance of the medical department of that institution. As a teacher, Dr. Peterson is no less instructive than he has been successful as a practitioner. His lectures are characteristic of his learning, attractive and forcible. Dr. Peterson is an able writer, especially on medical and allied subjects. He has furnished to the literature of the profession the following important contributions: "Criticisms on Dr. Draper's Theory of the Production of Butter from Clover;" "New Theory of the Production of Puerperal Eclampsia;" "Advances in Gynecology;" "Sims Drainage Tube in the Treatment of Ovariotomy;" "Monograph on Diphtheria;" "Dysentery in Alabama," and many other well accepted articles. For many years Dr. Peterson has been a prominent member of both his State and county medical associations. In 1886 he was president of the Medical Association of the State of Alabama. He is now Senior Councilor of the same association. He is very much devoted to his profession and its advancement, and well merits a place among the eminent American physicians and surgeons.

**PFUFF, Orange G.**, of Indianapolis, Indiana, was born at Westfield, near that city, April 28, 1858. He is of German descent, and of an ancient family, whose lineage can be traced as far back as the Fourteenth century. His grandfather was a soldier in the War of the Revolution, and served gallantly in the struggle for American independence. His father, Dr. Jacob L. Pfaff, was a native of North Carolina, and a noted anti-slavery man, who removed to Indiana in 1840, and died in 1859, while the subject of this sketch was an infant. When the latter was but six years of age his mother also died, and thus doubly orphaned he was sent to Indianapolis and given a home with his elder brothers, who afforded him every advantage within their means, not the least of which was an opportunity to attend the public schools. At the age of twenty he entered the office of the late Dr. T. B. Harvey, and under the supervision of that able preceptor began the study of medicine. In 1878 he became a student of the Medical College of Indiana, and received the degree of M. D. from that institution in 1882. During the six months succeeding his graduation he practiced his profession with Dr. Harvey, and was then appointed Resident Physician to the Marion County Asylum, a position he held for eighteen months. For a short time after severing his connection with that institution he practiced medicine in the State of Wisconsin, but soon returned to Indianapolis, where he has since remained engaged in an extensive and successful practice of general medicine and surgery. He has in recent years devoted special attention to gynecology, in which field of practice his recognized skill and

ability have given him high standing in his profession. He has been connected with the Medical College of Indiana in various capacities, and has been of almost invaluable aid to that institution. At this time he is Lecturer on Diseases of Women. He is also Consulting Gynecologist to the City Dispensary and to St. Vincent Hospital. In 1890 Dr. Pfaff took a special course in gynecology at the New York Post-Graduate Medical School and Hospital, and also in 1891 at the New York Polyclinic. In 1892 he supplemented his medical education and training in gynecological surgery, under the instruction of Dr. August Martin in Berlin, Germany, and attended clinics at the university of Berlin. Dr. Pfaff is an active member of the Indianapolis Surgical Society, Marion County Medical Society, Indiana State Medical Society, Mississippi Valley Medical Association, and the American Medical Association. He was married November 24, 1885, to Miss Mary Alvy, daughter of James H. Alvy, of Indianapolis.

**POLLOCK, A. M.**, of Pittsburgh, Pennsylvania, was graduated M. D. at the Medical College, of Ohio, in 1841, and died June 20, 1892, after a long illness, full of years and experience. Referring to Dr. Pollock, one of his professional associates writes: "I first became acquainted with this honorable gentleman in 1866, since when he has assisted me in many difficult and complicated cases at all hours of the twenty-four. I always felt that I had no ordinary prop to lean upon in trying and difficult cases. He did not practice his profession for glory, but for the benefit of his patients. He was unassuming, modest, quiet, cheerful and gentlemanly in the sick room, and rather than claim the credit himself for what assistance he might give or what light he might throw on a case, he would give the attending physician full share of the honor that might be derived from his counsel. He never belittled the attending physician to his patient, or to his friends. He always left him, after a consultation, with more of the patient's and patient's friends' confidence than before. He would not suggest a change in treatment unless it was actually necessary for the benefit of the patient, and then it would be made in such a gradual manner that it would be passed unnoticed. He had the 'touch of a lady,' and while he may not have had the other two attributes of the surgeon, 'the heart of a lion and the eye of an eagle,' yet he had other qualities which are far higher—good judgment, skill, caution and conscientiousness. He would not operate for the sake of operating." He would feel morally certain that the surgical measures would benefit the patient before he would resort to that procedure. Dr. Pollock was a permanent member of the Medical Society of Pennsylvania, to which he was admitted in 1871, and of which he was elected president in 1872. He was also a member of the American Medical Association, and was sent by it as a delegate to the International Medical Congress, Philadelphia, 1876.

**PORTER, David R.**, of Kansas City, Missouri, was educated in medicine at the College of Physicians and Surgeons, Keokuk, Iowa, from which institution he received the degree of M. D. in 1865. He also received an *ad eundem* degree on attendance at the Bellevue Hospital Medical College, New York, in 1872. He is now Professor of Principles and Practice

of Medicine and Clinical Medicine in the Kansas City Medical College, and is a member of numerous medical and scientific organizations.

**PORTER, Henry R.**, of Bismarck, North Dakota, was born in Lee Center, New York, in 1848. He was educated in medicine at the University of Georgetown, District of Columbia, and received the degree of M. D. from that institution in 1872. He was appointed Acting Assistant Surgeon United States Army during the same year. He served at Camp Grant, Arizona, and at Camp Hancock, Dakota. He afterward served in the field with the Custer expedition in 1876, and is the only surviving surgeon. Referring to this service, a recent writer says: Every man who took part in the fight on Reno Hill will always remember and speak kindly of Colonel Benteen. A braver man never lived, whose troops were only saved through his coolness and courage upon that occasion. Charlie Reynold, Custer's scout, was considered the "finest shot" in the Seventh United States Cavalry, and was among the first killed. He was with Reno's command, and said before the fight that more Indians were there than he ever saw together before. Of the three medical officers with Custer's command Dr. Porter was the only one who survived. Dr. Lord was killed on the hill with Custer's men, Dr. De Wolf was killed near the top of Reno Hill, and Dr. Porter had many narrow escapes while attending the wounded and dying, and though the bullets and arrows were flying around him thick and fast he did not falter in his duty. In a recent letter Colonel Benteen says: "I know of no medical officer in the regular corps who would have performed the work which Dr. Porter did with his small force of assistants; don't think there was, or is, one in the army. There was no nonsense, no gush about him, only strict attention to his duty, and he was as modest about it as a girl in her teens." The Custer battle-field is situated on the Little Big Horn river, Montana. A monument is placed where General Custer's remains were found. Only one officer's remains were buried there, those of young Lieutenant Crittenden. This was at the request of his father, General Crittenden, who said, "Bury him where he fell, on the battle-field." Comanche, the only surviving horse of the massacre, was found many miles away from the battle-field with seven wounds. The Secretary of War issued an order prohibiting any one from riding him, with instructions to detail a soldier to take care of him. He is led out, fully equipped, at all dress parades. The services of Dr. Porter as Acting Assistant Surgeon terminated in 1876, since which period he has been established in the city of his present residence, where he is engaged in a successful general practice of his profession.

**PORTER, William G.**, of Philadelphia, Pennsylvania, was educated in medicine at the University of Pennsylvania, and received the degree of M. D. from that institution in 1868. He is now Senior Surgeon to the Philadelphia Hospital, Surgeon to Presbyterian Hospital, Consulting Physician to the Philadelphia Dispensary, and Consulting Surgeon to the Educational Home for Boys. He is Fellow of the College of Physicians, Philadelphia Obstetrical Society, Philadelphia Academy of Surgery and member of the Pennsylvania State Medical

Society, American Medical Association, American Surgical Association and other leading medical and scientific organizations of this country.

**PORTER, William Henry**, of New York City, was educated in medicine at the College of Physicians and Surgeons, New York City, from which institution he received the degree of M. D. in 1877. He is now Professor of Clinical Medicine and Pathology in the New York Post-Graduate Medical School and Hospital, and late Curator of the Presbyterian and Bellevue Hospitals. He is an active member of the New York Academy of Medicine, New York Pathological Society, New York Neurological Society and of other leading organizations in that metropolis. Dr. Porter is editor of *Merck's Bulletin*, and author of "Renal Diseases and Urinary Analysis." He has also made other valuable contributions to the literature of his profession.

**POWELL, Thomas S.**, of Atlanta, Georgia, was graduated M. D. at the University of Pennsylvania, Philadelphia, in 1846. He is now Professor of Obstetrics and Lecturer on Medical Ethics in the Southern Medical College, Atlanta. He is also president of the Rosebrough-Powell University, which embraces the Southern Medical College, Dental College, Pharmacy and Law Departments.

**PRYOR, William R.**, of New York City, was educated in medicine at the College of Physicians and Surgeons, New York City, from which institution he received the degree of M. D. in 1881. He is now Lecturer on Gynecology in the New York Polyclinic, and Visiting Gynecologist to St. Elizabeth Hospital. He is an active member of the New York Obstetrical Society, New York Pathological Society, New York Academy of Medicine, and other medical organizations of that city. Dr. Pryor is also surgeon of the Twenty-Second Regiment of National Guards, State of New York.

**PYNCHON, Edwin**, of Chicago, Illinois, was graduated M. D. at the Medical College of Ohio, Cincinnati, in 1876, and supplemented his education and training by attending the hospital clinics at Berlin, Paris, and London during the years 1883, 1884 and 1885, since which time he has devoted special attention to the study and treatment of diseases of the nose and throat, in which field of medicine he has attained eminent success. He is now Instructor in Rhinology and Laryngology at the Chicago Post-Graduate Medical School, Special Lecturer on Diseases of the Nose and Throat and Their Relation to the Teeth at the United States Dental College of Chicago, and is Specialist in diseases of the nose, throat, and ear, and in genito-urinary surgery. He is a member of the American Medical Association, Chicago Medical Society and Chicago Medico-Legal Society. He is medical Examiner and Adviser for several life and accident insurance companies, has made important contributions to medical literature, and is associate editor of the *Medico-Dental Bulletin*, Chicago.

**QUIMBY, Isaac N.**, of Jersey City, New Jersey, was educated in medicine at the University of the City of New York, from which institution he received the degree of M. D. in 1859, since which time he has been actively engaged in a successful general practice of medicine and surgery. He is now president of the medical staff of the Jersey City Hos-

pital, and is ex-president of the Hudson County District Medical Society, member of the New Jersey State Medical Society, Medico-Legal Society of New York, British Medical Society, American Medical Association, and member of the Judicial Council of that organization. Dr. Quimby is also connected with many other medical societies of this country. He is one of the most accomplished and highly-esteemed physicians and surgeons in the State of New Jersey, and is widely known in his profession.

**QUINTARD, Edward**, of New York City, was educated in medicine at the College of Physicians and Surgeons, New York City, from which institution he received the degree of M. D. in 1887. He is Visiting Physician to St. Mary's Hospital for Children, and also Visiting Physician to Church Hospital and Dispensary. He is a member of the Columbia College Alumni Association, and Fellow of the New York Academy of Medicine.

**RAHTER, Charles A.**, of Harrisburg, Pennsylvania, was born near Minden, Westphalia, Prussia, August 8, 1839. Having received a common school English education, supplemented by a partial course at Pennsylvania College, Gettysburg, he attended his first course of medical lectures at the University of Maryland, and his second at the Long Island College Hospital, receiving from the last named institution his degree of M. D. in July, 1864. Until the ensuing October he practiced in Washington City, D. C.; was then appointed an Acting Assistant Surgeon in the United States Army, and in this capacity served until June, 1865. After resigning his position he established himself in Harrisburg, where, save during the Franco-Prussian War, he has since remained, engaged in an extensive and successful general practice of his profession. In 1870, on the breaking out of the war between France and Germany, he returned to his native country and offered his services to the government. From September 15 to October 15 he served as Assistant Surgeon in the General Army Hospital at Coblenz; was promoted to be Staff Surgeon, and placed in charge of the Barrack Hospital at St. Johann-Saarbrücken, where he remained until July 15, 1871, when he resigned his commission. In 1873 he received from the Emperor of Germany a medal for faithful and meritorious services. He is a member of the Pennsylvania State Medical Society, and, since its foundation, of the Dauphin County Medical Society, having been elected Secretary of the latter in 1868, Treasurer in 1869, and President in 1876. From August, 1865, to August, 1870, when he resigned the position, he was Examining Surgeon for the United States Pension Bureau. He married, November 11, 1875, Mary R., daughter of P. B. Keffer, Esq., of Harrisburg, Pennsylvania.

**RAUCH, John H.**, of Chicago, Illinois, was born in Lebanon, Pennsylvania, September 4, 1828. Matriculating at the Medical Department of the University of Pennsylvania, in 1847, he graduated from that institution in the spring of 1849. In 1850 he located in Burlington, Iowa, and commenced practice. During 1850-51 his attention was directed to the relation of ozone to diseases, and he bestowed upon the matter a careful and thorough investigation. About this time, and during the prevalence of cholera, he called the attention of Congress to the necessity of providing med-

ical aid for those engaged in maritime pursuits on the western waters, and succeeded in having established at Galena and Burlington sites—being appointed on the committee for their selection—upon which marine hospitals were subsequently erected, which were thrown open to use in 1853. In 1851, during his residence in Burlington, his attention had been called to the increase in cholera, following the burial of a number of its victims in the United States cemetery located there. With others he succeeded in securing the vacation by the government of the ground for burial purposes, and the donation of it to the Burlington University for educational purposes. During 1855-56 he devoted some time to assisting Professor Agassiz in the collection of material for his work, "The Natural History of the United States," and secured a valuable collection from the upper Mississippi and Missouri rivers; of specimens chiefly piscatorial. In 1856 he was instrumental in securing the passage of a bill through the Legislature authorizing a geological survey of Iowa. In the fall of 1870 he visited the mining districts of South America, in order to ascertain what prospects existed of improving the sanitary condition of the miners in the gold regions of Venezuela. During his sojourn there he made a large and valuable collection of natural objects for the Chicago Academy of Natural Sciences. He was a member of the Iowa State Medical Society, which was organized in 1850, and was its first delegate to the American Medical Association in 1851, and its president in 1853; also a member and one of the organizers (in 1859) of the Chicago College of Pharmacy, of the Chicago Academy of Natural Sciences, of the American Public Health Association, of which he was for several years treasurer, and in 1875-76 first vice-president, of the American Social Science Association, and one of the Agassiz memorial committee. He is the author of a report "On the Medical and Economical Botany of the State," read at the first annual meeting of the Iowa State Medical Society; of a description of the Agassiz collection above referred to, published in *Silliman's Journal of Natural Sciences*; on "Intramural Interments and their Influence on Health and Epidemics," discussed before the Historical Society of Chicago, in 1858; of a paper on "Slaughtering," and which contained his opinion respecting the Schuylkill drove-yard abattoir in Philadelphia, published in 1871; of a report of the "Texas Cattle Disease," in 1868, and numerous other papers on medical subjects, and on public hygiene. In 1852 he delivered the annual address before the State Horticultural Society of Iowa. In 1857 he was elected to fill the chair of *Materia Medica* in the Rush Medical College of Chicago, a position he held for three years while continuing to reside in Iowa; and in 1859 he was selected as Professor of *Materia Medica* and Medical Botany in the Chicago College of Pharmacy. He served throughout the Civil War as surgeon and medical director, and for his services was brevetted lieutenant-colonel. He was an active member of the Iowa Historical and Geological Institute during his residence in that State. In 1867, with others, he was instrumental in having the Board of Health organized in Chicago, became a member thereof and served until 1873, presenting, in 1868, a report on "Drainage;" in 1869, a report on "The

Chicago River and the Public Parks;" and in 1870 a "Sanitary History of Chicago," with the official report of the board of health from 1867 to 1870. During the fire of 1871, his "Report for the Board of Health," also a synopsis of the "Flora of the Northwest," his "Herbarium," his "South American Notes," and many other valuable papers on sanitary measures, were destroyed. At this time he became connected with the Relief and Aid Society of Chicago, and rendered valuable assistance as one of its associates and agents. Dr. Rauch is one of the oldest members of the American Medical Association, and is now secretary of the board of trustees of that organization. For several years past Dr. Rauch has been secretary of the Illinois State Board of Health, and his efficient services as sanitarian, and his untiring efforts in securing an elevation of the standard of medical education in this country, have gained for him not only a national reputation, but the most lasting gratitude of the public and the medical profession as well.

**RAYMOND, Joseph Howard**, of Brooklyn, New York, was born in that city November 18, 1845. Having received his preparatory education at the Brooklyn Collegiate and Polytechnic Institute and Williams College, whence he graduated A. B. in 1866 and A. M. in 1867, he entered the Long Island College Hospital and graduated thence M. D. in 1868. In the following year, having attended lectures in due form, he received an *ad eundem* degree from the College of Physicians and Surgeons, New York, and thereafter established himself in general practice in his native city. In 1870-71 he was House Physician and Surgeon to the Nursery Hospital on Randall's Island; in 1871-72 House Physician and Surgeon to the Brooklyn City Hospital, and has served as Visiting Physician to St. Peter's Hospital, Sanitary Inspector for the Brooklyn Board of Health, and Professor of Physiology in the Long Island College Hospital. He is now Professor of Physiology and Sanitary Science and secretary of the Faculty of the latter institution. He is also Physician for Diseases of Women to the Long Island College Hospital Dispensary, editor of the *Brooklyn Medical Journal*, director of the Department of Physiology in the Hoagland Laboratory, and Visiting Physician to the Sea-side Home.

**REED, R. Harvey**, of Mansfield, Ohio, was educated in medicine at the University of Pennsylvania, Philadelphia, from which institution he received the degree of M. D. in 1876. He is now Professor of Theory and Practice of Surgery and Clinical Surgery in the Ohio Medical University; Surgeon to the Baltimore and Ohio Railroad; treasurer of the National Association of Railway Surgeons; editor-in-charge of the surgical department of the *Railway Age* and *Northwestern Railroad*; Surgeon-in-chief of the Masonic Provident Association; Health Officer of Mansfield, the city of his residence; ex-president of the North Central Ohio Medical Society and Tri-State Sanitary Association; member of the Ohio State Medical Society, American Public Health Association, British Medical Association and the American Medical Association, and is a member of the Executive or Business Committee of that organization.

**REYNOLDS, Dudley S.**, of Louisville, Kentucky, was graduated at the University of

Louisville in 1868. He is now Professor of Ophthalmology, Otology and Medical Jurisprudence in the Medical Department of the Central University of Kentucky; Professor of Medical Jurisprudence in the Louisville College of Dentistry, Dental Department of the Central University of Kentucky and president of the Joint Faculties, and Ophthalmic Surgeon to Louisville City Hospital. Dr. Reynolds is a Fellow of the Medico-Chirurgical College of Philadelphia; member of the British Medical Association, American Medical Association, American Medical Editors' Association, Kentucky State Medical Society; chairman of the Judicial Council of the Association of American Medical Colleges; ex-president of the Mississippi Valley Medical Association, and member of the International Medical Congress. He is also director of the Polytechnic Society of Kentucky, and was chairman of its Library Committee from 1879 to 1892 inclusive.

**RICE, Clarence C.**, of New York City, was educated in medicine at the College of Physicians and Surgeons, New York City, from which institution he received the degree of M. D. in 1877. He is now Dean, secretary and Professor of Laryngology in the New York Post-Graduate Medical School and Hospital. Dr. Rice is an active member of the New York State Medical Society, American Laryngological Society and Laryngological Society of New York.

**RIDGE, Isaac M.**, of Kansas City, Missouri, was born in Adair county, Kentucky, July 9, 1825. In a life sketch published in the *Magazine of Western History* Edward L. Eames, his biographer, writes as follows: "His youth was passed in Kentucky and Missouri, to which his parents had removed, and when old enough to understand the bent of his ambition and the direction of his talents, by the advice and aid of his brother, J. G. Ridge, he formed the wise conclusion to devote himself to the practice of medicine. He studied with Dr. I. S. Warren, of Dover, Missouri, and pursued the usual course at the Transylvania University, at Lexington, Kentucky, from the medical department of which he was graduated in 1848 with the honors of his class. He had already settled in his mind that upon the site of the present Kansas City there would eventually be built a notable metropolis, and with that practical wisdom that has always been one of his distinguishing characteristics he determined to have a part therein. The changes that have so marvelously followed each other in Kansas City in the four decades past have therefore had a lively witness in the subject of this sketch, who, as one has aptly said, 'was among the first to watch the shadow of the Indian as he was forced to take his departure south for his present home in the Indian Territory.' Dr. Ridge made that place his home soon after he obtained his medical degree, and in season and out of season has been the tried and true friend of the little hamlet in which his lot was cast, of the village that succeeded it, and of the great city it has at last become. In 1848 he opened an office at the corner of Main street and the Levee, and entered energetically upon the practice of both medicine and surgery. As may be imagined, to use the words of one of his biographers, the demands for his services were for a considerable time by no means frequent, for the Indians

had their own 'medicine men,' and the white settlers were few indeed. But he had come to stay, and he persevered, answering such calls as came, waiting and watching for the tide of immigration to flow in that direction. The Indians were at that time numerous and troublesome, but Dr. Ridge was fortunate in cultivating their friendship to such an extent that the Wyandottes, who then occupied that portion of the country as their hunting ground, declared him in council their 'pale-faced brother,' and bestowed upon him the name of 'Little Thunder,' and ever afterwards he exerted among them a powerful influence which extended to other tribes that lived on the western border of Missouri, as it then was, but now in eastern Kansas. For the appellation above given Dr. Ridge was indebted to the Walkers—all of whom were half Wyandotte, but men of refinement and culture; men who were his particular friends, and associates of the Wyandotte nation—particularly Governor William Walker, first provisional governor of Kansas, who was one of the most talented and educated men of his time. He indeed was the intellectual giant of the men of Indian descent of his age. His was a friendship to be courted by all true men, and Dr. Ridge has the pleasure of knowing that he possessed it. From 1850 to 1856 the country settled up quite rapidly, and the Doctor's practice was so extensive that he was often compelled to ride from a hundred to a hundred and fifty miles in twenty-four hours. During the memorable pro-slavery troubles that raged along the Missouri-Kansas border from 1856 to the days of the Rebellion, Dr. Ridge found himself called upon to act in a certain measure as a 'physician of the times,' as well as a healer of physical ills. He cast his lot with neither side during that series of struggles, wisely showing himself a friend to all, and using his great and effective personal influence in the healing of wounded feelings, in smoothing over personal difficulties, and in advising belligerents on both sides. But it must not be imagined from this that Dr. Ridge was wanting in personal courage to defend personal friends. On more than one occasion did he prove this; and one instance of a memorable character may be recorded in this connection. It was when the Governor of Kansas was arrested by a gang of marauding villains who would have hanged or shot him but for the timely interference of Dr. Ridge, who, being informed of the Governor's perilous situation, hastened to the rescue and found him in the hands of a gang of unprincipled partisans who were howling for their prisoner's blood. Dr. Ridge, who like the man he was defending, did not know what fear was—save the fear of wrong-doing—and who was known to the most of, if not all, the Governor's captors, defied them and declared that only by the sacrifice of his own life at their hands should they murder or harm his once strong friend. This act of daring is regarded by Dr. Ridge as having been a sacred privilege which all true men should be proud to extend to each other, particularly when one has been favored by services rendered in by-gone days by the one he saves. Ex-Governor Charles Robinson, of Kansas, is a living witness to the fact that this thrilling act of heroism in the life of Dr. Ridge was but an act of gratitude in return for

Dr. Robinson's manliness and goodness of heart, in having traveled on horseback, one stormy night in May, 1849, to administer to Dr. Ridge, who was in a collapse, and supposed to be dying of cholera. After exhausting his skill, and battling with this master of all diseases for thirty-six or forty-eight hours, Dr. Robinson left him a crazed and dying young man, and went on his journey to California. A few eventful years in California passed, Dr. Robinson returned to the East, and pitched his tent in Kansas; was made governor, and was, in 1860, deemed worthy of death by that howling mob who had made him prisoner; when that young man he had left crazed and apparently dying, in May, 1849—the knowledge of whose miraculous recovery had not reached him—made his appearance in the presence of the would-be murderers, and in vehement and determined language demanded the prisoner's release. In the words of Dr. Robinson, in a speech delivered in the National Exposition building in Kansas City, Missouri, in 1880, 'honors were easy between the two Dr. R's.' These troubles of the pre-war period had hardly passed by when the troubled days of 1860 followed, and Dr. Ridge again found himself between two fires, and for a second time forced to act as mediator, this time as both friend and adviser for Unionists and Confederates. In 1861 he was the only practicing physician left in the section, and was often forced, at the point of the bayonet or the muzzle of a pistol, to visit the sick and wounded, to administer medicine or perform surgical operations; sometimes taken blindfolded to where his services were required and returned in the same way to the place of starting. Those were indeed exciting times, and the Doctor passed through many a thrilling scene that might be dwelt upon with romantic interest, did space permit. On every hand he found opportunities to imitate the Good Samaritan, and many a luckless fellow, blue-coat and gray-coat, lives to bless him for his skill and liberality. It is said that Dr. Ridge, legitimately and through compulsion, did a business of from twenty to fifty thousand dollars during the war for which he never received a cent, and for several years after that stormy period his practice was unprecedentedly large. The labors of Dr. Ridge during his years of active service in his profession were mainly given to the demands of his avocation, and he had little leisure or desire for ventures in other paths of public usefulness. He avoided rather than sought office of any kind, despite which fact his friends compelled him to serve some time as city councilman. He was also the active City Physician for several years, and it is a noteworthy fact that during his incumbency of that office the city passed through cholera and small-pox epidemics. He was once placed by his friends in nomination for State Senator. He retired from the practice of medicine about 1875, to give attention to his numerous other interests that had been growing steadily upon his hands. He had invested the proceeds of his extensive practice in land from time to time in and about Kansas City, and the growth thereof long since placed him among the wealthy men of his State. Dr. Ridge was for many years an ardent, devoted, and prominent member of the Masonic order, and did all in his power to advance the interests and uphold the noble principles of that time-honored fraternity,

and in more than one instance during the war did its secret but powerful influence intervene to save his life and raise him up friends in the midst of enemies. Illustrations of these are cited in Masons' History of Kansas City as follows: During the first days of the Civil War Dr. Ridge had been reported to Colonel Jennison as disloyal, and the colonel sent a squad of men to 'take care' of him. It was forty against one, and as a last chance Dr. Ridge gave a Masonic sign, which was immediately recognized by a young Prussian lieutenant in command, who waved his sword over his head calling out in broken English: 'Poys, shust put up dem guns; dot man ish all ridght!' A second instance of Masonry saving his life is related as having occurred in the spring of 1862. In 1850 Dr. Ridge was first married to Miss Eliza A. Smart, daughter of Judge Smart, of Kansas City. Three of the five children born to this union are still living, two of his sons being prominent in the business circles of that commercial emporium. She was a devoted wife and mother, esteemed for her noble traits of character, unusual literary attainments and many acts of quiet beneficence. Her death was mourned by many in all stations of life. In 1882 Dr. Ridge was again married to Miss Mary D. Campbell, the talented and accomplished daughter of Bartlett Campbell, one of the best known of the business men of Cincinnati, Ohio. She is a highly-cultured pianist, and as a vocalist has few superiors in this country. His home is one of the notable places in Kansas City; internally, because of its culture, elegance and generous hospitality, and externally because of its commanding position. The site of 'Castle Ridge,' as it is called, is of such altitude as to afford a wide and charming view of the city and the surrounding country in every direction. In the center of this beautiful elevation is the doctor's elegant residence, the designs and plans of which were all outlined by himself. The structure is in the form of a Greek cross, and in architecture combines the Tuscan and Corinthian orders, and is beautified by a mansard roof and crowned by imposing towers and minarets. Dr. Ridge has well earned the rest and leisure he now enjoys, and in the quiet evening of his days can look back upon a long life of labor and of successful achievements filled with deeds of good to his fellow-men. Of pleasing address and courteous manners, he is a generous and warm-hearted gentleman whom all greet with pleasure, and whom many poor and unfortunate have cause to remember with gratitude. He has contributed largely in money and influence toward the upbuilding of his city. Generous and liberal in his sentiments, enjoying the confidence, respect and esteem of the community, having good health and the capacity to enjoy the comforts which his wealth can command, there are, let us hope, many years of happiness and usefulness yet before him."

**RICHARDSON, Charles W.**, of Washington City, District of Columbia, was graduated in medicine at the University of Pennsylvania in 1884, and received an *ad eundem* degree from the medical department of the Columbian University during the same year. He is now Professor of Laryngology and Otology in the latter institution, Throat and Ear Surgeon to Providence Hospital and Foundling Asylum,

Washington City. Dr. Richardson is a member of numerous local and national medical organizations.

**RILEY, Frederick C.**, of New York City, was educated in medicine at the University of the City of New York, from which institution he received the degree of M. D. in 1878, since which time he has devoted special attention to the treatment of the eye and ear. He is now Ophthalmologist and Otologist to the New York Institution for the Deaf and Dumb, and holds the same position for St. Benedict's Home, at Rye, New York. Dr. Riley is a Fellow of the New York Academy of Medicine, and an active member of other medical organizations in that metropolis.

**RIVERS, Edmund C.**, of Denver, Colorado, was graduated M. D. at the University of Maryland School of Medicine, Baltimore, in 1878. He is now Professor of Ophthalmology and Otology in the Medical Department of the University of Denver. He is an active member of the American Ophthalmological Society, Colorado State Medical Society, Denver Medical Association, and Arapahoe County Medical Society.

**ROBERTS, Milton J.**, of New York City, was educated in medicine at the University of the City of New York, from which institution he received the degree of M. D. in 1878, since which time he has devoted special attention to mechanical therapeutics and orthopedic surgery. He is now Visiting Orthopedic Surgeon to the City Hospital, Randall's Island; Consulting Surgeon to Woman's Hospital, Brooklyn, and was Professor of Orthopedic Surgery and Mechanical Therapeutics in the New York Post-Graduate Medical School and Hospital from 1882 until 1887, also late Professor of Orthopedic Surgery in the University of Vermont. He is a Fellow of the New York Academy of Medicine, member of the New York Orthopedic Society, New York Electrical Society, New York State Medical Society, American Association for the Advancement of Science, and of numerous other important medical and scientific organizations.

**ROBINSON, Paul Gervais**, of St. Louis, Missouri, of Huguenot and Irish ancestry, was born in Charleston, South Carolina, August 22, 1834. He was educated at the Charleston Academic College, graduating A. B. in 1854, and studied medicine in the South Carolina Medical College, Charleston, where he received the degree of M. D. in 1856. After graduating he spent two years at the *École de Médecin*, Paris. On returning he settled first in Charleston. He entered the service of the Confederate States in the Civil War, and was connected at various times with the First South Carolina, and Twenty-Second North Carolina, and Third Alabama Regiments as Surgeon, and served till the close of the Rebellion. In 1866 he was Chief of Clinic to Prof. E. Geddings in the South Carolina Medical College, and adjunct to the Chair of Practice of Medicine. In 1867 he removed to St. Louis. In 1869 he was elected to the Professorship of Principles of Diagnosis and Clinical Medicine in the Missouri Medical College, and in 1877 to that of Principles and Practice of Medicine, and the Deanship in the same institution; the latter position he still (1893) retains. He is a member of the Medico-Chirurgical Society of St. Louis, and has served as Chairman of the Section of Practical Medicine of the American Medical

Association. In 1858 he married Elizabeth, daughter of Samuel Henry Dickson, late Professor of Principles and Practice of Medicine at Jefferson Medical College, Philadelphia; she died in 1861. In June, 1869, he married Lina, daughter of Hon. Bernard Pratte, of St. Louis, Missouri.

**ROCHESTER, De Lancey**, of Buffalo, New York, was educated in medicine at the University of Buffalo, from which he received the degree of M. D. in 1884, and is now Adjunct Professor of the Principles and Practice of Medicine in that institution. He is vice-president of the Buffalo Obstetrical Society, member of Erie County Medical Society, Buffalo Medical and Surgical Association and Buffalo Pathological Society.

**ROGERS, Edmund J. A.**, of Denver, Colorado, was graduated M. D. from the Medical Department of McGill University, Montreal, in 1881, and became a Licentiate of the Royal College of Physicians and the Royal College of Surgeons, Edinburgh, Scotland, during the same year. He is now Professor of the Principles and Practice of Surgery in the Medical Department of the University of Denver. He is a member of the American Medical Association, Colorado State Medical Society, Denver Medical Association and Arapahoe County Medical Society.

**ROGERS, William B.**, of Memphis, Tennessee, was educated in medicine at the Bellevue Hospital Medical College, from which institution he received the degree of M. D. in 1878. He is now Professor of Surgery in the Memphis Hospital Medical College. Dr. Rogers is a member of the American Medical Association, Tri-State Medical Society (of Tennessee, Georgia and Alabama), National Association of Railway Surgeons, Southern Surgical and Gynecological Association, and the Memphis Medical Society.

**ROTHWELL, William J.**, of Denver, Colorado, was graduated M. D. at the Jefferson Medical College, Philadelphia, in 1873, and supplemented his medical education and training by attending the New York Polyclinic in 1884. He is now Professor of Materia Medica, Therapeutics and Clinical Medicine in the Gross Medical College, Denver. Dr. Rothwell is an active member of the Colorado State Medical Society, Denver Medical Association, and other medical organizations.

**RUEDI, Carl**, of Denver, Colorado, was graduated in medicine at the University of Berne, Switzerland, in 1873. He is now Professor of Pathology and Clinical Medicine in the Medical Department of the University of Denver. Dr. Ruedi is a member of the American Medical Association, American Climatological Association, Colorado State Medical Society, Denver Medical Association, and other medical organizations of this country.

**SANGER, Eugene F.**, of Bangor, Maine, was born in Waterville, Maine, October 18, 1829. He was educated at Waterville Academy and Dartmouth College, graduating A. B. from that institution in 1849. He pursued his medical studies in Jefferson Medical College, Philadelphia, from which institution he obtained the degree of M. D. in 1853. The degree of A. M. was received from Waterville College in 1857. After graduating in medicine he served as Assistant Surgeon in the United States Marine Hospital, Chelsea, Massachusetts, and as Assistant Physician and

Surgeon at Blackwell's Island Hospitals, New York, and Insane Asylum in 1853-54. During parts of that and the next year he spent in Europe, and returning to this country located himself at Ellsworth, Maine. In 1857 he removed to Bangor. During the war—June 2, 1861—he was Surgeon to the Sixth Maine Infantry; promoted to United States Brigade Surgeon in the same year; Surgeon-in-Charge St. James' Hospital, New Orleans, 1862, and Medical Purveyor of the Department of the Gulf; Chief Surgeon Second Division Nineteenth Army Corps, 1863; Medical Director of same, Department of the Gulf, 1864, and Surgeon-in-Charge of Elmira (New York) prison, in the same year; Medical Director of District of Michigan, and Surgeon-in-Charge of Harper's and St. Mary's Hospitals, Detroit, in 1864 and 1865; Medical Inspector and Medical Director of District of East Tennessee during part of 1865; and was also Surgeon-General of the State of Maine, with rank of Colonel, during 1869-70, and has served for many years as United States Examining Surgeon to the Pension Bureau. In 1876 he was elected President of the Sixth Maine Regimental Association at the grand reunion at Portland of all the regiments which served in the war from Maine. He is a member of the Loyal Legion, and has held the position of common councilman of the city of Bangor. He is a member of the Penobscot County Medical Association; of the State Medical Association, of which he was secretary in 1859, vice-president in 1871, and president in 1876; of the American Medical Association, and honorary member of the Detroit Academy of Medicine. He has contributed various articles to the Transactions of the Maine Medical Association; among them: "Eczema," "Elbow-Joint Resection," "Inversion of the Womb," "Malignant Growths," and "Abscess of Lungs."

**SATTERTHWAITE, Thomas E.**, of New York, was educated in medicine at the College of Physicians and Surgeons, New York City, from which institution he received the degree of M. D. in 1867. He was professor of Pathology and General Medicine in the New York Post-Graduate Medical School and Hospital from 1882 until 1890. He is now Consulting Physician to the Orthopedic and Babies' Hospitals and Northeastern Dispensary, New York City. He is late president of the New York Pathological Society, and member of the New York State Medical Society, New York County Medical Society, New York Academy of Medicine, American Academy of Medicine, and the International Medical Congress.

**SCOTT, Clinton H.**, of Como, Colorado, was born at Towanda, Pennsylvania, September 29, 1855. He is the son of William Scott, a lawyer, and grandson of Hon. George Scott, one of the first judges of Bradford county, Pennsylvania. He was educated in his native State at Susquehanna Collegiate Institute, Towanda; Mansfield State Normal School, and Wyoming Seminary, Kingston. He commenced the study of medicine in 1874, and pursued it under the instruction of Dr. J. W. Lyman, of Towanda, and Drs. W. G. MacConnell and J. W. Barr, of Philadelphia. He attended medical lectures at Jefferson Medical College, Philadelphia, and was graduated at that institution in March, 1878. Dr. Scott commenced the practice of medicine at Athens, Pennsylvania, but soon after removed to

Sayre, in the same State, where he remained until 1883, when he accepted the position of Surgeon for the Union Pacific Coal Company at Como, Colorado, and removed to that place. He removed to Denver in 1888, but in 1891 failing health necessitated a change to a higher altitude, and he returned to Como. He has attained some distinction as a surgeon, and has been especially successful in orthopedic and railway surgery. He is a member of Elmira (N. Y.) Academy of Medicine, honorary member of Chemung County (N. Y.) Medical Society, and was vice-president of Bradford County (Pa.) Medical Society from 1880 till 1883. He was State Censor (Pa.) in 1883, ex-member Colorado State Medical Society, member National Association of Rail-

*Clinton H. Scott*

way Surgeons, and Southwestern Association of Railway Surgeons. In 1879 Governor Hoyt of Pennsylvania appointed him Coroner of Bradford county, that State, to fill a vacancy, and in 1882 he was elected to the same office. In 1884 he was elected Coroner of Park county, Colorado, and was re-elected in 1885. He served as County Physician of Park county (Colo.) during the years of 1885, 1886 and 1887. He was appointed Health Commissioner of Como in 1885, and elected Mayor of that town in 1886. In 1889 he was appointed by Mayor Londoner to the office of Health Commissioner of the city of Denver. The city charter required the appointee to have been a resident of the city for a period of two years preceding his appointment, and as Dr. Scott had only resided there a little more than one year, he was not able to qualify. He has for many years taken an active interest in politics, but never aspired to any office which would interfere with the practice of his profession. He is Union Pacific Railway Surgeon on the Denver, Leadville and Gunnison division. He was never married.

**SEAMAN, Louis L.**, of New York City, was graduated M. D. at the Jefferson Medical College, Philadelphia, Pa., in 1876, and received an *ad eundem* degree from the University of the City of New York in 1877. He is ex-chief of the staff of Charity Hospital, Blackwell Island, and is now Visiting Physician to the New York Lying-in Asylum, Consulting Physician to the Colored Orphan Asylum, and Medical Supervisor of the Mutual Reserve Fund Life Association. Dr. Seaman is a member of the New York Academy of Medicine, New York Pathological Society, New York Medico-Legal Society, and other well known medical organizations of that Metropolis.

**SELDEN, Charles W.**, of New York City, was graduated M. D. at the Jefferson Medical College, Philadelphia, Pa., in 1857. He was Professor of Anatomy in the National Medical College, Washington City, D. C., from 1857 until 1861. He then entered the Confederate Army, and was Surgeon-in-Charge of the Louisiana Hospital, Richmond, Virginia, during the first year of the War of the Rebellion, and subsequently served from 1861 until 1865 as Surgeon of Twenty-fourth Virginia Battalion. Since the close of the war he has been engaged in a successful general practice of medicine and surgery, and is of recognized skill and ability.

**SELL, Edward H. M.**, of New York City, was born in Lehigh county, Pennsylvania, August 16, 1832. He was a son of Samuel Sell, whose grandfather came from Canton Berne, Switzerland, and of Mary (Miller) Sell, granddaughter of Conrad Miller, a drummer of the Revolution, who was born in Wurtemberg, Germany. His education was obtained in a Friends' school at Quakertown, Allentown Seminary (now Muhlenburg College), and at Gettysburg, and received the degree of A. B. in 1856 and A. M. in 1859 from the Pennsylvania College, at that place. He studied medicine in the Bellevue Hospital Medical College, New York, and graduated M. D. in March, 1866. He was also graduated Master of Obstetrics in the University of Vienna in March, 1872. After graduating and practicing for four and a half years, he visited, during three years, all the principal hospitals in all the large cities of Europe, viz: Paris, Vienna, Berlin, London, Edinburgh and Dublin, and on returning, located himself again in New York in general practice, but making a specialty of gynecology and obstetrics. He is a member of the County Medical Society of New York, of the Medico-Legal Society, of the American Medical Association, of the New York Pathological Society, Fellow of the New York Academy of Medicine, one of the founders of the American Academy of Medicine, 1876, and Fellow of the Obstetrical Society of London. He is also a member of the Society of German Naturalists and Physicians, and was delegate to the forty-fifth annual meeting at Leipzig, in August, 1872; also delegate to the British Medical Association, from the American Medical Association, in 1870, 1873 and 1876, and was also a delegate to the International Medical Congress in 1890. His contributions to professional literature are: "Puerperal Eclampsia," "Opium Poisoning in Children, with Recovery by Use of Electricity," "A Case of Complete Uterus Bicornis," "Fibroid Polypus Uteri," "Obstetrics in Vienna," "Tapping Ovarian Cysts," "Ovariectomy," "Ovarian Tapping," "Cystic Tumor of Vagina," "Amputation of

Neck of Uterus" and "Procidencia Uteri." He has also been editor of the *Physician and Pharmacist*. Since 1873 he has been Physician to the Northeastern Dispensary for Diseases of the Head and Abdomen, and also held the same position for diseases of women in the same institution. Since July, 1874, he has been Physician for Diseases of Women to the Eastern Dispensary.

**SEMMES, Alexander J.**, of Savannah, Georgia, of Anglo-Norman-Celtic lineage, was born in Georgetown, District of Columbia, December 17, 1828. He is the son of Raphael Semmes, Esq., of Nanjemoy, and Matilda Neale Jenkins, of Cobneck, on the Potomac, in Charles county, Maryland; his paternal and maternal grandfathers were officers of the Maryland line in the Revolutionary Army, direct descendants of the English Catholic gentry, who, flying from persecution in England, came to Maryland between 1636 and 1650; some of whom settled in the adjoining counties of Virginia. Dr. Semmes was a cousin of Raphael Semmes, commander of the Alabama in the Confederate Navy. He was educated at Georgetown College, District of Columbia, receiving the degree of A. M. in 1853, and in addition to three years of medical study with Dr. Grafton Tyler, Professor of the Practice of Medicine in the National Medical College, Washington, District of Columbia, attended three courses of lectures at the latter institution, graduating from it in 1851, and subsequently attending clinical lectures in the medical schools and hospitals of London and Paris. He first settled in Washington City, D. C., where he was Physician to the United States jail, but removed thence to New Orleans, Louisiana, whence, after the Civil War, he went to Savannah, Georgia. He was one of the two resident physicians of the Charity Hospital at New Orleans, in 1860. He was appointed Surgeon of the Eighth Regiment of Louisiana Volunteers, June 19, 1861, and on the 4th of the following month was commissioned a Surgeon in the Confederate Army, serving from 1861 to 1863 as surgeon and brigade surgeon in Hay's Louisiana brigade, of (Stonewall) Jackson's corps, in the army of North Virginia; as Surgeon-in-Charge of the Third Division of the Jackson Military Hospital at Richmond, Virginia; as Medical Inspector, by special order No. 6, department of North Virginia, May 21, 1862; as inspector of hospitals in the department of Virginia, by special order No. 32, A. and I. G. O., Richmond, February 7, 1863; as a member of the army board to examine medical officers, by special order No. 34, A. and I. G. O., Richmond, February 11, 1862, and as president, in January, 1865, of the Examining Boards of the Louisiana, the Jackson, the Stuart, and the Winder Hospitals, Richmond. After the close of the Civil War he returned to New Orleans and was Visiting Physician to Charity Hospital during the years 1866 and 1867, and from 1870 to 1876 Professor of Physiology in the Savannah Medical College. Subsequently he took orders in the Roman Catholic Church, and in 1886 he became president of Pio Nono College, Macon, Georgia. He has been a member of the Medical Society of the District of Columbia, the Georgia Medical Society, and the American Medical Association, of which he was one of the secretaries in 1858-59, and 1869, and was in 1852 corresponding secretary of the

American Medical Society in Paris. He is the author of "Medical Sketches in Paris," 1852; "Poisoning by Strychnine," 1855; "Medico-Legal Duties of Coroners," 1857; "Gunshot Wounds," 1864; "Notes from a Surgical Diary," 1866; "Surgical Notes of the Late War," 1867; "Medical Reviews and Criticisms," 1860-61; "Revaccination; Its Effects and Importance," 1868; "Preparations of Manganese," 1868; "The Fluid Extracts," 1869; "Evolution, the Origin of Life," two papers read before the Georgia Medical Society, 1873; the "Influence of Yellow Fever on Pregnancy and Parturition," paper read before the Georgia State Medical Association, 1875, and other papers, both numerous and important. He has also written frequently for literary and other non-professional periodicals. He was married October 4, 1864, at Savannah, Georgia, to Sarah Lowndes Berrien, daughter of the late John Macpherson Berrien, attorney-general of the United States in the cabinet of President Jackson, and for many years United States Senator from Georgia.

**SENN, Nicholas**, of Chicago, Illinois, was born in Canton St. Gaul, Switzerland, October 31, 1844; immigrated to this country with his parents in 1852; settled in Washington, Wisconsin; received a grammar school education at Fond du Lac, Wis., and after teaching school for two years, began the study of medicine with Dr. E. Munk, of the latter city, in 1864. He studied also in the Chicago Medical College in 1866, and graduated in the spring of 1868. After serving for eighteen months as Resident Physician to Cook County Hospital, he commenced the practice of medicine in Ashford, Wisconsin. In 1869 he married Miss Aurelia S. Muehlhauser. He removed to Milwaukee in 1874, and became Attending Physician to Milwaukee Hospital. In 1877 he visited Europe and attended the University of Munich, Germany, and was graduated at that institution in 1878. After his return to this country he established himself in Chicago, having been elected Professor of the Principles of Surgery and Surgical Pathology in Rush Medical College. He now holds the chair of Practice of Surgery and Clinical Surgery in the same institution. His specialty is surgery, and in recent years his skill in abdominal surgery, and especially in his treatment of gastro-intestinal lesions, has gained for him a world-wide reputation. He is a member of the American Medical Association and of numerous other local and national medical organizations. Soon after the inauguration of Governor Altgeld he was appointed Surgeon-General of the National Guard of Illinois. Dr. Senn is also president of the Association of Military Surgeons of the National Guard of the United States, and from his address to this organization, delivered at its second annual meeting at St. Louis in April, 1892, we here publish the following extracts: "Every good citizen takes a just pride and deep interest in the safety and prosperity of his country. His patriotism should bear a direct ratio to the degree of freedom and protection he enjoys and the richness of the natural resources within his reach. If freedom, protection and prosperity are the elements which are productive of patriotism, every citizen of the United States is, or should be, imbued with love and gratitude for his country, and ready to defend it in time of danger. It is a great privilege to be a citizen of the

greatest country on the face of the earth, and to belong to the most powerful and progressive nation in the world. Our country has taken a place in the front rank among the ruling nations. Its brief history is an unbroken record of unparalleled growth and prosperity. Its inhabitants, composed of the best elements of most every civilized nation, have made good use of the wonderful opportunities presented, and have built up cities and industries which have become a source of admiration and envy everywhere. Since the War of Independence and foundation of this great republic, a little more than a century ago, we have become the leading nation, not through the influence of a large standing army, but by developing the unlimited resources within our legitimate reach, aided by a wise administration of the laws made by the people and for the people. During this short period of our existence as a

nation we have taken an enviable position among the powers of the world, and our beautiful flag, the star-spangled banner, is respected and admired wherever it is unfolded. The stars and stripes are everywhere recognized as a symbol of liberty and equality. The history of the War of Independence, and more recently of the War of the Rebellion, has proved to the outside world that the American citizen is a born soldier. Within a few months, during the late conflict, large armies faced each other in deadly combat, and on each side a heroism was displayed never excelled before. Battles were fought such as the world had never seen before or since. The endurance, discipline and courage of our citizen-soldiers

have become a matter of honorable record, and have never, and are not likely to be, surpassed by any standing army. Our country came out of this great struggle greater than ever. There is no North and no South. The 'gray and the blue' celebrate their war experiences side by side, and relate their victories and defeats without sectional feeling. The star-spangled banner again floats over a harmonious and peaceful nation, and is revered and loved as dearly in the South as in the North, and should the time come when it is in danger, the whole country will rise in its defense. What a happy choice our forefathers made when they selected the eagle as the emblem of our country! Like the king of the skies, that knows no rival in his sphere, our country has outstripped the Old World in everything that pertains to the welfare of its people. The mingling of many nations has produced a race peculiarly well adapted for self-government. Our little standing army, composed of less than 25,000 men, scattered in small detachments over a vast territory, has been seldom called into active service, except occasionally to subdue a hostile band of Indians on the frontier. Should an emergency arise necessitating military interference, either in the defense of our borders or to crush anarchism, our standing army would be too small to answer the requirements. Fortunately every true American citizen regards himself as a guardian of public peace, ready to defend his rights, and ever ready to protect the country of his birth or adoption. The National Guard of the United States, numbering about 100,000 citizen soldiers, is a military body of far-reaching influence and great power. It is composed of the very best elements of society. It represents almost every profession, trade and business interests. It is composed of men who, under all circumstances, are loyal to their general and respective State governments. It constitutes an efficient police force scattered over this vast country from the Atlantic to the Pacific, and from the British possessions to the Gulf of Mexico. Should it become necessary to call out the whole force, an army of 100,000 men, well equipped and well drilled, could be concentrated in any part of the country ready for duty within three to five days. The many strikes and riots which have menaced the peace and personal and public property for a number of years have shown the necessity of an efficient National Guard. Every loyal and peace-loving citizen will consider it a privilege to contribute his share towards securing and maintaining such a force. Money paid out of the State treasury for such a purpose is well invested." Referring to the means of elevating the standing and usefulness of military surgery, Dr. Senn continues: "We live in an age of organization of united effort and concentration of work. The unparalleled advances in science, art, and literature that have characterized the last decade are largely due to systematic united work. It is true that a great discovery or an important observation comes occasionally like a flash of lightning from a clear sky, the product of some fertile brain, but the greatest advances requiring thorough scientific investigation have been accomplished by the concerted action of many laboring with the same object in view. The stimulus imported by the work and success of others is the motive which impels individual

effort, and comparison of the results realized becomes either a source of gratification or acts like a lash that arouses the latent forces to renewed action. In our country nearly every profession, trade and business has now its local and national associations. Less than a year ago about fifty surgeons of the National Guard, representing fifteen States, met in the city of Chicago and organized the association of Military Surgeons of the National Guard of the United States. All present were fully impressed with the necessity of such an association, and manifested a keen interest in its organization. To-day we have opened our first annual meeting in this beautiful city, and have received such a warm welcome on the part of the State, the city, the medical profession and citizens as is seldom extended to a scientific body. As an association we have not yet reached our first birthday, and yet we have attained a membership of over two hundred. A deep interest in the welfare and prosperity of our organization has been manifested outside of our ranks throughout the United States. The newspapers and medical journals have treated us with every mark of courtesy, and have brought our good work to the attention of military officers, the public and the medical profession. The general government has encouraged us from the very beginning by detailing for our benefit a number of the oldest and most experienced surgeons to attend our meetings. Military surgery is at present in a transitional stage. Human ingenuity has exerted itself to the utmost during the last few years in perfecting cannon, guns and other implements of destruction. The smokeless powder and the small caliber conical bullet, surrounded by a steel mantle, have revolutionized modern warfare. Rapid firing and certainty of aim at a great distance will make the battles of the future of short duration, but the loss of life and the number disabled by wounds will be fearful. The bullet wounds that will come under the treatment of the military surgeons of future wars will present an entirely different aspect, and will call for different treatment than those inflicted by the old weapons. The modern bullet, by virtue of its great penetrating power, will either produce a speedily fatal wound, or the injury it produces will be more amenable to successful treatment because it produces less contusion of the soft tissues and splintering of bone than the heavy bullet used in the past. Bruns, Bardeleben, and others have made careful experimental researches concerning the effect of the new projectile; but this subject is not exhausted, and there is plenty of room for original work by our members in this department of military surgery. The operative treatment of penetrating wounds of the chest and abdomen, on the battle-field, offers another inviting field for original investigation. The various materials devised for dressing wounds on the battle-field have all their faults and merits, but none of them are perfect. The methods of transportation of the sick and wounded, the construction of tents and movable barracks are not closed chapters, and are all susceptible of improvement by original thought and investigation. More ingenuity has been displayed of late years in perfecting fire arms and in the invention of machines for wholesale destruction of life than in devising ways and means in saving the lives of those seriously injured. It is our

duty as military surgeons to counteract as far as we can the horrors of war by devising life-saving operations, and by protecting the injured against the dangers incident to traumatic infection. Antiseptic and aseptic surgery must be made more simple than they are now in order that we may reap from them equal blessings in military as in civil practice. Enough has been said to show you that a military association of this kind can become an inestimable boon to mankind if some of the members will explore unknown regions and bring to light the priceless jewel of original thought and research. The subject of this sketch has made numerous valuable contributions to medical and surgical literature, and his reputation as a writer is no less distinguished than that of clinical teacher and operative surgeon. His books entitled "Experimental Surgery" and "Intestinal Surgery" embody Dr. Senn's own views on the results of his clinical experience and original investigation. They have met with an extensive circulation and their author is universally regarded as one of the most original and advanced workers in the field of surgical progress. Of his more recent publications the one entitled "Senn's Surgical Bacteriology" is worthy of special mention. This is a handsome octavo volume, illustrated with colored plates and fine engravings, published by Lea Brothers & Co., Philadelphia (second edition 1892). Referring to its merits the *Annals of Surgery* says: The book is valuable to the student, but its chief value lies in the fact that such a compilation makes it possible for the busy practitioner whose time for reading is limited and whose sources of information are often few, to become conversant with the most advanced ideas of surgical pathology, which have laid the foundation for the wonderful achievements of modern surgery. In concluding this sketch reference should be made to Dr. Senn's recent magnificent gift to his city and profession which consists of his great collection of medical books, donated to the Newberry Library, Chicago, the value of which can not be estimated in money, for as Milton says, "A good book is the precious life-blood of a master spirit embalmed and treasured up on purpose to a life beyond life." Dr. Senn has for many years been engaged in gathering this priceless collection of medical literature, but for most part the gems of the library were obtained by purchase from the estate of Dr. William Baum, Professor of Surgery, University of Göttingen. He was one of the founders of the German Congress of Surgeons, and for fifty years had been collecting works on anatomy, physiology, surgery, and the old classical authorities. Having died in 1886, his estate offered the library for sale. His wish was that the German Congress of Surgeons should purchase the library, but that organization did not see their way clear to meet the expenses. The administrator of his estate publicly stated that Professor Baum had spent over forty thousand dollars in its purchase. The administrator offered the library to various parties, and the Royal Library of Berlin offered an almost fabulous price for a number of antiquarian volumes contained in the collection, but the administrator, following the wishes of Prof. Baum, refused to separate the books, and announced that it would be sold by auction. This coming to the ears of Dr. Senn, he at

once secured it by making a partial payment, and then withdrew it from sale. The books were shipped to Dr. Senn, then in Milwaukee, in fifty-two cases, constituting an entire car load. Beside the works on surgery, gynecology and ophthalmology in the Baum library, the collection contains a full set of Virchow's Archives, several single volumes of which are now valued at \$50 each. Langenbeck's Archives, Jahresbericht der Gesund. Medicine, Cannstatt's Jahresbericht, Prager Vierteljahreschrift, and the Deutcher Chirurgie. (The continuation of these periodicals from time to time, by the terms of the gift, the Newberry Library must hereafter procure as published.) To the foregoing, Dr. Senn has added nearly all the modern works on surgery, which includes gynecology, and allied branches. He will retain his working library of modern works, and a few old favorites to which he is naturally attached. It is said that the first thought of this action was suggested by Mrs. Senn, who, appreciating the value of the library, pointed out the insecurity of a private house from fire and other casualties, and Dr. Senn concluded that he would place the collection at the disposal of the profession. There are thousands and thousands of pamphlets, ancient and modern, and atlases almost numberless. All of these go with the collection, the money value of which is about fifty thousand dollars. No bibliophile can part with his books without regret, and yet in this action Prof. Senn has built himself a monument more enduring than bronze or marble, for generations of medical men, long after those now on the stage shall have passed away, will draw inspiration and wisdom from the "Senn Collection" in the Newberry Library, and as often with gratitude reflect on the noble generosity of its distinguished founder.

**SEWALL, Henry**, of Denver, Colorado, was educated at the Wesleyan University of Middletown, Connecticut, from which institution he received the degree of B. S. in 1876, and at the Johns Hopkins University, Baltimore, Maryland, from which he obtained the degree of Ph. D. in 1879. He subsequently began the study of medicine and entered the University of Michigan, Ann Arbor, from which institution he received the degree of M. D. in 1888, and also received an *ad eundem* degree from the Medical Department of the University of Denver in 1889. He is now Professor of Physiology in the latter university, Assistant Health Commissioner of Denver, and secretary of the Colorado State Board of Health. Dr. Sewall is an active member of the American Association of Physicians, Colorado State Medical Society, Denver Medical Association and Arapahoe County Medical Society, State of Colorado.

**SEXTON, Samuel**, of New York City, was educated in medicine at the University of Louisville, Kentucky, from which institution he received the degree of M. D. in 1856. During the late war between the states he served as Surgeon of the Eighth Ohio Volunteers. Of recent years he has devoted special attention to the study and treatment of diseases of the ear. He is now Aural Surgeon to the New York Eye and Ear Infirmary, and is an active member of the American Otolological Society and the American Medical Association.

**SEYMOUR, William Pierce**, of Troy, New

York, was educated at Williams College, from which he received the degree of A. B. in 1845. He then studied medicine, entered the University of Pennsylvania, receiving the degree of M. D. in 1848. He was Assistant to the Obstetric Institute of Philadelphia from 1848 to 1849, was Professor of Materia Medica and Therapeutics in Castleton Medical College from 1857 until 1862, Professor of the same chair in Berkshire Medical College from 1858 until 1863, and was then made Professor of Obstetrics and Gynecology and Diseases of Children in the same institution from 1863 until 1865. He also held the Chair of Obstetrics and Diseases of Children in the Albany Medical College from 1870 until 1873, and that of Obstetrics and Gynecology in that institution from 1873 until 1875. Dr. Seymour is a member of the American Medical Association, New York State Medical Society, member of the Union Medical Association of New York, Vermont, and Massachusetts, and other medical organizations in this country. He is also a Fellow of the American Association for the Advancement of Science.

**SHAFFER, Newton M.**, of New York City, was educated in medicine at the University of the City of New York, receiving the degree of M. D. from that institution in 1867. He is now Attending Surgeon-in-Charge of the New York Orthopedic Dispensary and Hospital; also Consulting Orthopedic Surgeon to St. Luke's Hospital, and Consulting Surgeon to the New York Infirmary for Women and Children. He is a member of the Congress of American Physicians and Surgeons, American Obstetrical Association, Fellow of the New York Academy of Medicine, New York Neurological Society and other well-known medical organizations of that metropolis.

**SHARP, Joseph**, of Kansas City, Missouri, was educated in medicine at the College of Physicians and Surgeons of Kansas City, Missouri, from which institution he received the degree of M. D. 1873, since which time he has been engaged in an extensive and successful practice of general medicine. He is now secretary of the Faculty and Professor of Therapeutics and Clinical Medicine in the Kansas City Medical College and is a member of the staff of All-Saints and German Hospitals. Dr. Sharp is a member of the American Medical Association, Missouri State Medical Society and of all other leading medical organizations of his city and State.

**SHRADY, George Frederick**, of New York City, was born January 14, 1837. He comes from American parentage antedating the Revolution, in which both of his grandfathers, who were natives of New York, took part. He received his literary education at New York College. He graduated also at the College of Physicians and Surgeons, in New York, in 1858, and from the Surgical Division of the New York Hospital, where he was an *Interne* in 1859, after which he settled in New York and commenced practice. During the war he occupied the position of acting assistant surgeon in the United States Army. In 1866 the *Medical Record* was founded, and he became its editor-in-chief, which position he continues to hold. Yale College conferred on him the honorary degree of A. M. in 1869, for promoting the interests of medical literature. He was appointed one of the Surgeons to the Presbyterian Hospital, New York, in 1877; is

a member of the New York Pathological Society, and has served as its secretary for many years; member of the New York Academy of Medicine, permanent member of the Medical Society of the State of New York, and of the Medical Society of the County of New York. He has contributed a number of articles on surgical subjects to the *New York Journal of Medicine*, and from 1860 to 1864 was associate editor of the *American Medical Times*. Since the establishment of the *Medical Record* Dr. Shradley has contributed various editorial and miscellaneous articles to its pages, and acquired a world-wide reputation as a medical journalist for, by his wise and judicious management of that periodical, it has attained a circulation and practical value to the medical profession during the past twenty-five years, which is unsurpassed by any other publication in this country, and which ranks second to no other in Europe.

**SILLIMAN, Benjamin**, of New Haven, Connecticut, son of Benjamin and Harriet (Trumbull) Silliman, was born in that city December 4, 1816, and died there January 14, 1885. After a sound preparatory training he entered Yale College in August, 1833, and graduated in 1837. Among his classmates were Samuel J. Tilden, William M. Everts, Edwards Pierrepont, James D. Whelpley, Morrison R. Waite, and others distinguished in professional and political life. After graduating he was employed as assistant and teacher in the departments of chemistry, mineralogy and geology in Yale College, and in original studies and investigations in these sciences, and their practical applications in the arts. In 1845 he was appointed at Yale Professor of Chemistry Applied to the Arts, the first appointment in the "Fourth Department of Philosophy and the Arts" then inaugurated. The history of this department is interesting, and is entitled to some space here, as in its later form the institution is destined to become Professor Silliman's principal monument. In 1842 he commenced to receive private pupils in analytical chemistry and mineralogy, in an apartment of the old laboratory in Yale College, which he had fitted up at his own expense for this purpose, and to conduct original investigations in science. Previous to this time there had been no provision made for the instruction of advanced students in physical and chemical science either in Yale College or elsewhere in the United States, and the academical students had been instructed in chemistry almost exclusively by public lectures. These studies under Mr. Silliman were entirely outside the college curriculum, and for some years the college took no cognizance of the effort. The students it brought to the university were not even recognized as such, nor for some years did their names appear in the college catalogue. But in 1846 a memoir asking for the official recognition and organization of the new department of advanced science teaching was presented to the corporation of the college, and at Mr. Woolsey's suggestion a committee was appointed, and the plan widened to embrace advanced instruction in other subjects. This committee reported in 1847 the plan of a "Fourth Department," devoted to philosophy and the arts, the first appointments to which had already been made in 1846, Mr. John P. Norton to agricultural chemistry, and Mr. Silliman to chemistry applied to the arts. The

Yale Scientific School, as then organized, commenced its operations in 1847, opening its laboratories in the old presidential mansion. The entire cost of fitting and furnishing the laboratories, apparatus, libraries, and cabinets was defrayed out of the private means of the two professors. But the pupils came in goodly numbers, and to-day the Sheffield Scientific School, into which the movement has developed, embraces more professors than the old academical college had in 1837, with a role of over two hundred students, and with constantly increasing power and endowments. In 1849 Dr. Silliman was elected to the Chair of Medical Chemistry and Toxicology in the medical department of Louisville University, and its duties he discharged for five winters. In 1854 he resigned this position to take up the instruction in chemistry in the Academy and medical departments at Yale, made vacant by the resignation of his father. His chair was known as that of General and Applied Chemistry. He resigned his duties in the Academic Department in 1870. Apart from his collegiate labors, Professor Silliman had given much time to other means for the diffusion of scientific knowledge. In 1845-46 he gave, in New Orleans, a course of lectures on agricultural chemistry, upon the invitation of the leading professional and commercial men of that city, and this, it is believed, was the first course of lectures on that subject given in the United States. In 1853 he accepted charge of the chemical, mineralogical and geological department of the Crystal Palace in New York. He was one of the fifty original members named in the act of Congress in 1863 incorporating the National Academy of Sciences, and served the government in this capacity during the war upon some important commissions. He was also one of the trustees of the Peabody Museum of Natural History, and a member of numerous scientific societies on both sides of the Atlantic. In 1849 he received the honorary degree of M. D. from the University of Charleston, South Carolina. In 1868 he parted with his private cabinet of minerals, of his own collecting, to Cornell University, where it is now exhibited as the "Silliman Cabinet." He made important additions to the mineralogical collections of Yale College and to the metallurgical cabinet of the Scientific School, the results of his various explorations. These were largely prosecuted in California, which he visited in 1864, and again in 1867 and 1872, for professional work in the mines and for mineralogical and geological researches. His visit in 1867 was made the opportunity by the College of California to secure him for the delivery of the annual oration, which was subsequently published. The funds by which the mineralogical cabinet of the late Baron de Lederer was added to Yale College collections in 1843 were solicited by him. For several years previous to his death Dr. Silliman had been much occupied as a witness in the courts, having been employed in many important causes in which scientific testimony and investigation were called for. His aid was also constantly invoked in various matters connected with the practical arts where a knowledge of scientific principles was involved. In 1848 he became director of the New Haven Gas Works, and served in that capacity and as chairman of the Committee on Works and Distribution for

many years. He also served as a member of the Common Council of that city from 1845 until 1849, and did important work in behalf of municipal government. The honorary degree of M. D. was conferred on him by the University of South Carolina in 1849, and that of LL. D. by Jefferson College in 1884. From 1838 until 1845 Prof. Silliman was, with his father, assistant editor of the *American Journal of Science and Arts*, and was associated with James D. Dana as its editor from the latter year until his death. His scientific papers were nearly one hundred in number, of which over fifty were published in the *American Journal of Science and Arts*, and they cover a wide range of topics. In addition, he published "First Principles of Chemistry" (Philadelphia, 1846 revised edition 1856), of which more than 50,000 copies were sold; also "Principles of Physics" (1858, revised edition 1868), and in 1875 was issued his "American Contributions to Chemistry." He was married in 1840 to Susan H. Forbes, of New Haven, who bore him seven children.

**SIMMONS, Gustavus Lincoln**, of Sacramento, California, of Puritan and Revolutionary descent, was born in Hingham, Plymouth county, Massachusetts, March 13, 1832. He received his preliminary education in the schools and academy of his native town, and in 1849—soon after the discovery of gold, when but seventeen years of age—he became a pioneer to the Pacific coast, rounding Cape Horn, to join a brother-in-law—the late Dr. Henry B. May—in San Francisco. Soon after his arrival he removed to Sacramento, and commenced his medical reading while acting as assistant dispensing clerk to his relative. When twenty-one years of age he returned to the East, and entered the Tremont Street Preparatory Medical School in Boston, and the Medical Department of Harvard University, receiving his degree from the last-named institution in 1856. He established himself in Sacramento, and has acquired a large practice in Central California. With a view of making a specialty of surgery, he has made two visits to Europe, on each occasion spending a winter in the hospitals of the leading cities. He has, among his notable reported cases, ligated the common carotid, wired the tendon Achilles, eight times performed tracheotomy, and in 1858 reported the first case of ovariectomy in California. He is a member of the American Medical Association, and served upon the committee of arrangements at the California meeting of that body in 1871, a member of the California State Medical Society, of the Massachusetts State Medical Society, of the Sacramento Society for Medical Improvement, and the Sacramento Board of Health. He has been Surgeon of the Sacramento County Hospital, brigade surgeon of the Fourth Brigade National Guards, California, and secretary of the city board of education. His writings have been confined to reports of medical societies, and papers in the medical periodicals. He was married in June, 1863, to Celia, daughter of Rev. Peter Crocker, formerly of Richmond, Indiana.

**SIMPSON, James**, of San Francisco, California, was born in the northern part of Maine, August 12, 1829. He removed at an early age with his parents to Quebec, Canada, where he was educated and resided until twenty years of age. He studied medicine in

the Albany Medical College, New York, and also in the University of the City of New York, graduating from the latter in 1855. He practiced awhile at New Brunswick, and at Calais, Maine, removing to California and locating at Timbuctoo, Yuba county. Thence moved to Grass Valley, Nevada county, and in 1873 in consequence of failing health, visited Europe, and returning settled in San Francisco, where he has since remained engaged in a successful general practice of medicine. He is a member of the American Medical Association, of the California State Medical Society and of the San Francisco Medical Society. In May, 1876, he was elected president of the Board of Medical Examiners of the State Medical Society, under a law just passed to regulate the practice of medicine in the State; was appointed in 1874 a member of the Board of Health of San Francisco by the Governor, and retained both these positions for several years. In 1878 Dr. Simpson was elected Professor of *Materia Medica* and Therapeutics in the Medical Department of the University of California, and has filled this chair creditably to himself and to that institution.

**SMITH, A. Alexander**, of New York City, was graduated M. D. at the Bellevue Hospital Medical College, New York City, in 1871. He is now Professor of *Materia Medica*, Therapeutics and Clinical Medicine in that institution, Visiting Physician to Bellevue Hospital, Consulting Physician to Gouveneur Hospital and the Hospital for Ruptured and Crippled. He is an active member of the American Physicians and Clinicians' Academy of Medicine, American Climatological Society, and New York Medical Society.

**SMITH, Eugene**, of Detroit, Michigan, was educated in medicine at the University of Buffalo, New York, from which institution he received the degree of M. D. in 1866, since which time he has devoted special attention to the study and treatment of diseases of the eye and ear. He is now Professor of Ophthalmology and Otology in the Detroit College of Medicine, Surgeon to St. Mary's Hospital, and St. Mary's Hospital Free Eye and Ear Infirmary. Dr. Smith is a member of the American Medical Association, and ex-president of the ophthalmic section of that organization. He is also an active member of the Detroit Medical and Library Association, and of numerous other medical societies.

**SMITH, John Lawrence**, of Louisville, Kentucky, was born December 17, 1818, near Charleston, South Carolina, and died in the former city October 12, 1883. His father was a Virginian, who had moved to the last-named State. The subject of this sketch received a classical education in the Charleston College, after which he was sent to the University of Virginia. Here he at first devoted much attention to pure mathematics, later concentrating himself upon the higher branches of physics, mixed mathematics and chemistry. He chose civil engineering as a profession, and after two years' study was employed as one of the assistant engineers on the then projected railroad between Charleston and Cincinnati. This pursuit not proving congenial, he began to study medicine, and in three years graduated at the Medical College of South Carolina, March, 1840. Then he went to Europe, and pursued his medical studies for an additional

three years, continuing his attention to those departments which first enlisted his scientific affections. He studied physiology under Flourens and Longet; chemistry under Orfila, Dumas and Liebig; physics under Pouillet, Desprez and Becquerel; mineralogy and geology under Elie de Beaumont and Dufrenoy. He returned to America in 1844, having already begun to earn a reputation in original scientific researches, principally in connection with fatty bodies. His paper on "Spermaceti," in 1842, at once gave him standing as an experimental inquirer. On arrival in Charleston he began the practice of medicine, and gave a course of lectures on toxicology. The State of South Carolina appointed him assayer of the bullion that came into commerce from the gold fields of Georgia, and he also gave much time to agricultural chemistry, and researches in geology and mineralogy. His attention was early drawn to the marls on which Charleston stands, and he was one of the first to ascertain the true character of this immense agricultural wealth. He published a paper on the subject, with the correspondence of Prof. Bailey, Microscopist of West Point. He also pointed out the large amount of phosphate of lime in these marls, from which there are now obtained immense quantities of phosphatic nodules. During these labors he made a thorough investigation into the meteorological conditions, character of soils and culture affecting the growth of cotton. In consequence of his report on this subject President Polk, in 1846, appointed him, in response to a request of the Sultan, to teach the Turkish agriculturists the proper method for successful management of cotton culture in Asia Minor. Finding, on arrival in Turkey, that an associate in the commission had induced the Turkish Government to undertake the culture of cotton near Constantinople, Professor Smith declined to connect his name with an enterprise he was satisfied would be a failure, and which proved so. He was about to return home when the Turkish Government tendered him an independent appointment, that of mining engineer, with most liberal provisions. This position he filled during four years, and he performed his duties with such signal success that the Turkish Government heaped upon him the decorations of the empire, and very costly presents. The results of Professor Smith's labors are a permanent advantage to the empire, and it has received ever since 1846, and continues to receive, large revenues from his discoveries of emery, chrome, ores, and coals, within the domains of Turkey. His papers on these subjects, read before learned societies, and published in the principal scientific journals of Europe and America, gave him a high position among scientific men. His labors in Asia Minor on the subject of emery, which he was the first to discover there, led to its discovery in America; and in Massachusetts and North Carolina a large industrial product of emery is now carried on. In the scientific journals of this country, the papers on emery and corundum recognize the successful researches of Professor Smith as having done almost every thing for these commercial enterprises. These discoveries of emery in Asia Minor destroyed the rapacious monopoly of the article at Naxos, in the Grecian Archipelago, increased the amount of emery used five or six fold, with a corresponding reduction in price. In many of the

arts of life the free use of emery, or corundum, has become a necessity, but this free use of these articles would have been greatly retarded without a very material reduction in price. While in the employment of the Sultan of Turkey, Professor Smith investigated a great variety of Turkish resources, besides those directly within the purview of his appointment as mining engineer. His paper on the "Thermal Waters of Asia Minor," is one of extreme interest and great scientific value. In 1851 he invented the inverted microscope, an important improvement; for, while it may do the work of any other microscope, there are very interesting fields of research which can be cultivated by no other instrument. Dr. Carpenter, in his work on "Physiology," bears strong testimony to its value. After Professor Smith's return from Turkey, his *alma mater*, the University of Virginia, elected him Professor of chemistry, and, while discharging the duties of that chair, he, in connection with his assistant, George J. Brush (subsequently one of the chief professors in the Sheffield School of Science), performed a much-needed work in revising the Chemistry of American Minerals. A full account of these labors was given in the *American Journal of Science*, and since then in a valuable and interesting work containing the scientific researches of Professor Smith, recently published by J. P. Morton & Co., Louisville. After marrying in Louisville, the youngest daughter of the Hon. James Guthrie, Professor Smith adopted that city as his home. He was elected, soon after settling in Louisville, to the chair of chemistry in the Medical Department of the University of Louisville, a position which he held for a number of years. After resigning that position he took scientific charge of the gas works of Louisville. He had a private laboratory where he devoted several hours each day, and continued his original research. He was one of the commissioners to the Paris exposition of 1867, and made an able report on "The Progress and Condition of Several Departments of Industrial Chemistry." It is very nearly exhaustive of the important subjects to which it is devoted. He was again appointed commissioner to Vienna in 1873, and discharged his duties with his usual ability. His important original researches number fifty, and his scientific reports were numerous. He was elected president of the American Association for the Advancement of Science in 1872, and was president of the American Chemical Society in 1877. In 1879 he was elected corresponding member of the Academy of Sciences of the Institute of France to succeed Sir Charles Lyell. The Baptist Orphan Home of Louisville was founded and largely endowed by him. At the Centennial exhibition in Philadelphia in 1876 he was one of the judges in the department relating to chemical arts, and contributed a valuable paper on "Petroleum" to the official reports. He was a member of the American National Academy of Sciences, of the Chemical Society of Berlin, of the Chemical Society of Paris, of the Chemical Society of London, of the Société d'Encouragement pour l'Industrie Nationale, of the Imperial Mineralogical Society of St. Petersburg, corresponding member of the Boston Society of National History, of the American Academy of Arts and Sciences, of the American Philosophical Society, American Bureau of Mines, the Société

des Sciences et des Arts de Hainaut, the Royal Society of Göttingen, a Chevalier de la Legion d'Honneur, member of the order of Nichan Iftahar of Turkey, a member of the order of Medjidiah of Turkey, and Chevalier of the Imperial order of St. Stanislas of Russia. He founded and edited the *Charleston Medical Journal* in 1846, under the name of the *Southern Journal of Medicine and Pharmacy*, which he returned over to Dr. Gaillard when he went to Turkey. His published papers were about 150 in number. The more important of them were collected and published by him under the title of "Mineralogy and Chemistry, Original Researches" (Louisville, 1873, enlarged edition, 1884). Mrs. Smith transferred to the National Academy of Sciences \$8,000, the sum that was paid by Harvard University for Dr. Smith's collection of meteorites, the interest of which is to be expended in a "Lawrence Smith Medal" valued at \$200, and presented not oftener than once in two years to any person that shall make satisfactory original investigations of meteoric bodies. The first presentation of this medal was April 18, 1888, to Prof. Hubert S. Newton.

**SMITH, Samuel Parrish**, of Prattville, Alabama, was born near Clinton, Georgia, September 8, 1814. His father, moving to Alabama in 1818, was one of the early pioneers of that State. Dr. Smith's early education was obtained at the common schools in the neighborhood, and his medical studies were pursued under the supervision of Dr. J. W. Withers, of Washington, Alabama, at the Jefferson Medical College, during the winter of 1835 and the summer of 1836, where he took partial courses in anatomy, materia-medica, chemistry, and practice, also paying special attention to the lectures of Dr. W. P. C. Barton on medical botany. He attended the clinics of the Pennsylvania and Blockley Hospitals, and took a full course at the Jefferson College the ensuing winter. He returned to Alabama in the spring of 1837, and commenced practice with his former preceptor. In November he visited New Orleans, and entered the medical department of the University of Louisiana, from which institution he graduated the following spring. Returning to his former location he continued in practice there till 1845, when he settled in Prattville in a general surgical and medical practice. Among his more important cases, he has successfully operated on a young lady for strangulated femoral hernia; also for the removal of a shawl-pin from the trachea of a lady, where it had lodged during laughter, an operation which took three hours to perform. There has also come under his experience a case of natural childbirth, but where, in the endeavor to remove the placenta, he found, incorporated in the secundines, a dead fetus, the cause of a supposed miscarriage with which his patient had been threatened in the fifth month of her pregnancy, leading him to the supposition that both children were conceived at the same time; also a case in which a full-blooded negro woman had given birth to twins, one within fifteen minutes of the other, the first born being black, flat-nosed thick-lipped, kinky-haired, and black-eyed, and the second being a light mulatto, with straight red hair and hazel eyes, the case illustrating the fact that the children may have had different fathers. He is a member of the Autauga County

Medical Society, of the Alabama State Medical Association, and of the American Medical Association. He was first president of the County Medical Society, and has been Counselor of the State Association. His contributions to medical literature have been a report on the "Medical Botany of Autauga County," a report of the "Medical History of Prattville and Vicinity," and a report upon the "Surgery of Autauga County." He has been road commissioner and trustee of schools of his township, and counselor of the town of Prattville; also Examining Surgeon for various life insurance companies. Dr. Smith is one of the oldest and most esteemed members of the medical profession in the State of Alabama, having been continuously engaged in the general practice of medicine and surgery for a period extending over a half century.

**SOMERS, Andrew B.**, of Omaha, Nebraska, was graduated M. D. at the College of Physicians and Surgeons, New York City, in 1872, since which time he has been engaged in an extensive and successful practice of general medicine and surgery. He is now Physician to the Methodist and Presbyterian Hospitals, Omaha; Surgeon for the Employers' Liability Assurance Corporation, and Health Commissioner of Omaha. He is an active member of the Nebraska State Medical Society, Missouri Valley Medical Society, Omaha Medical Society and the American Public Health Association.

**SPEAR, Edmund D.**, of Boston, Massachusetts, was educated in medicine at the Harvard Medical School, and was graduated M. D. from that institution in 1874, since which time he has devoted special attention to the study and treatment of diseases of the eye and ear. He is now Aural Surgeon to Massachusetts Charitable Eye and Ear Infirmary and Aural Surgeon to Out-Patient Department of the Boston City Hospital. He is an active member of the American Otological Society, Massachusetts Medical Society, Boston Society for Medical Observation, Boston Society for Medical Improvement and the Harvard Medical School Association.

**SPENCER, Horatio N.**, of St. Louis, Missouri, was educated in medicine at the College of Physicians and Surgeons of the City of New York, from which institution he received the degree of M. D. in 1869, since which time he has devoted special attention to the study and treatment of aural diseases. He is now Professor of Diseases of the Ear in the Missouri Medical College and the St. Louis Post-Graduate School of Medicine. Dr. Spencer is an active member of the American Otological Society.

**SPITZKA, Edward Charles**, of New York City, was born in that metropolis, September 20, 1851. He was educated in New York, and received a liberal education in the New York Free Academy (now City College). He then studied medicine in the University of the city of New York, graduating from the Medical Department on February 21, 1873. After passing over two years in German universities he settled in his native city, having, while abroad become assistant to Professor Shenk in the latter's laboratory for embryology and histology at Vienna. In August, 1877, he was awarded the Tuke Prize of one hundred guineas, by the Medico-Psychological Association of Great

Britain, for the best essay on "The Somatic Etiology of Insanity," in international competition. In 1878, by his paper on the action of strychnine, he won the William A. Hammond Prize, which was awarded by the American Neurological Association. He is chiefly engaged in the practice of mental and nervous diseases, as well as in anatomical, embryological, and histological researches. He is a member of the American Neurological Association, vice-president of the New York Neurological Society, member of the Medical Journal and Library Association; also of the New York County Medical Society, and was a member of the International Medical Congress which met in Philadelphia, in 1876, and before which he read a paper. He was vice-president of the Section on Neurology at the Ninth International Medical Congress, in 1887. He was Professor of Medical Jurisprudence and Nervous Diseases in the New York Post-Graduate Medical School and Hospital, from 1881 until 1884; he then became Consulting Physician to the Northeastern Dispensary, and is now (1893) Physician to the Department of Nervous Diseases in the New York Polyclinic, and Physician to the Department of Nervous Diseases in the Metropolitan Throat Hospital. "Dr. Spitzka has been frequently consulted as a medical expert in cases where insanity, or injury of the brain or spinal cord was a subject of litigation. Conspicuous among these was his attitude in the trial of President Garfield's assassin, where both prosecution and defense endeavored to retain his services, but failing, secured his attendance through an attachment. He then testified to the prisoner's insanity, and was the only expert that did so." His original investigations in the anatomy, and physiology of the nervous system, and success in the treatment of all diseases relating to his specialty have gained for him a national reputation. He is the author of "A Second Origin of the Abducens," "On the Connection Between the Symptoms of Insanity and the Lesions on which they Depend," Transactions of the International Medical Congress; "The Psychological Pathology of Progressive Paresis," and "Contributions to Encephalic Anatomy." He was one of the editors of the *American Journal of Neurology*, from 1881 until 1884. He published a "Treatise on Insanity," New York, 1883, and the sections on diseases of the spinal cord and on inflammation, anemia, and hyperemia of the brain in Pepper's "System of Medicine," Philadelphia, 1887, were written by Dr. Spitzka.

**STAFFORD, James**, of New York City, was graduated in medicine at the medical department of the University of Vermont in 1885, and received an *ad eundem* degree from the medical department of Columbia College, New York City, in 1886. He is now Attending Gynecologist to the Northern Dispensary, Assistant Attending Gynecologist to Bellevue Hospital Out-Patient Department, and Clinical Assistant in Gynecology to the New York Polyclinic. Dr. Stafford is a member of the Alumni Society of Bellevue Hospital, New York County Medical Association, and other leading medical societies in his city.

**STANLEY, Charles Wesley**, of Chicago, Illinois, was born in Conway, New Hampshire, May 28, 1828, and died in New York City October 26, 1893. He received his early education at the Oneida Institute, and was gradu-

ated in 1866 from the medical department of the University of New York. In 1870 he removed to Chicago, where for over twenty years he was actively engaged in the practice of his profession. Dr. Stanley was quiet and retiring in disposition, and a devoted student. As a physician he was capable and sympathetic, and by his kindly nature he endeared himself to all with whom he came in contact.

**STANTON, Otis**, of Washington City, D. C., was born in Strafford, New Hampshire, October 22, 1837, and died in the former city April 9, 1890. He obtained his medical education at the Bowdoin College, graduating in the class of 1862. In that same year he became Acting Assistant Surgeon U. S. Army, and served in and around Washington until the latter part of 1865. He then took up practice at that city, giving special attention to gynecology. He was a member of the Board of Directors of the Columbia Hospital for Women and Lying-in Asylum. He was a corresponding member of the Gynecological Society of Boston.

**STAPLES, George McLellan**, of Dubuque, Iowa, of English and Scotch-Irish descent, was born in Buxton, Maine, April 26, 1827. Having graduated A. B. from Waterville College, in 1849, he attended medical lectures at Bowdoin College in 1851 and at the Harvard Medical School in 1854, and from the latter institution received his degree of M. D. in March, 1855. Previous, and for a few months subsequent to his graduation, he practiced at Farmington, Maine, removing thence in January, 1856, and establishing himself at Dubuque. In November, 1861, he was commissioned surgeon of the Fourteenth Iowa Regiment; was Acting Medical Director of the Right Wing, Sixteenth Army Corps, from March, 1864, to November, 1864, and was honorably discharged from the service with the brevet rank of lieutenant-colonel of volunteers. He then returned to Dubuque, and has since acquired one of the largest and most lucrative practices in the State of Iowa. While engaging in a general practice, he has given especial attention to surgery, and has performed numerous capital operations, including the first successful case of ovariectomy in the Dubuque region. He is a member of the Dubuque Medical Society, president in 1859 and 1871; was a delegate to the American Medical Association in 1872, and has since been a member of that organization. Of his professional publications may be mentioned "Hysteria," "Physiological and Therapeutical Properties of Veratrum Viride," "Amputation at the Knee-Joint," "Medical Constitution of Diseases," and reports of surgical cases. He married, August 20, 1854, Abbie C., only daughter of Dr. Allen Phillips, of Farmington, Maine.

**STEVENS, Thaddeus M.**, of Indianapolis, Indiana, was born in that city August 29, 1829, and died there November 8, 1885. He was the son of a distinguished jurist, and nephew of the illustrious statesman for whom he was named. He was educated in the private schools of his native city, and studied medicine under the preceptorship of the late Dr. J. S. Bobbs. He first attended the Indiana Central Medical College, and then entered the University of Pennsylvania, from which institution he received the degree of M. D. in 1853, settling first at Fairland, near his native city, but soon afterward established himself at Indianapolis, where he became a physician of rec-

ognized skill, and attained eminence in his profession. In 1870 he was Professor of Toxicology, Medical Jurisprudence and Chemistry in the Indiana Medical College, and in 1874 occupied the same chair in the College of Physicians and Surgeons. His taste was rather for medical literature than practice. At one time he edited the *Indiana Medical Journal*, and his pen was always ready for the leading medical subjects. The last ten years of his life were devoted to State medicine, and he was largely influential in the establishment of the State Board of Health, of which he was the first secretary and executive officer. And his last effort for the public good was to establish a State Hospital, for the benefit of the sick poor. He was a member of the County, State and Tri-States Medical Societies, and of the American Medical, and American Public Health Associations. He was a warm friend of the younger members of the profession, and favored the idea of promoting a younger class of men to the honorable positions in medical organizations. Dr. Stevens left a wife and two young sons to mourn his death.

**STEVENSON, Alexander C.**, of Greencastle, Putnam county, Indiana, was born in Woodford county, Kentucky, November 21, 1802, and died January 2, 1889, at the advanced age of eighty-seven years. He was the eldest son of James Stevenson and Margaret (Campbell) Stevenson. His mother was a daughter of Alexander Campbell, a pioneer of Kentucky. His paternal grandfather, Benjamin Stevenson, of the Eastern shore of Maryland, was, during the War of the Revolution, a soldier of the patriot army, and soon after that conflict removed from Maryland into Kentucky, when the latter was a territory of Virginia. His son James entered the United States Army in the War of 1812, as a private soldier, and in that struggle endured such hardships that he ever afterward remained an invalid. This fact made the subject of this sketch, while yet a boy, the stay and support of the family, compelling him to supervise the servants and market the farm products. Diligence, even then, characterized him, and he often arose at 2 o'clock in the morning to be first with his products in Lexington, a market nine miles away. This training and constant labor gave to him a splendid physical and intellectual manhood. Educational advantages he had but sparingly. The common schools of Kentucky at that day were but indifferent, and seminaries and colleges were distant and expensive. He who there acquired learning usually relied upon himself and the private tutor. The latter facility he had not, and books were scarce. He therefore made nature his text-book, and acquired wisdom and diligence from her precepts. Himself a laborer and brought in contact with slavery, the injustice of that institution made strong impressions upon his mind, and determined him to seek a home in a land of free institutions, where to labor was honorable. Impelled by principle, he at the age of nineteen years, and in 1821, left Kentucky and went to Indiana, seeking a location. Railroads there were none—clay roads were but trails, and difficult even for horsemen. Young Stevenson entered lands northward from where Rockville now stands. He was not disappointed with the country, and from that time regarded Indiana as his home. After satisfactorily "prospecting" the Hoosier

State, he returned to his family in Kentucky, where he was induced to study medicine. On completing his course he entered Transylvania University at Lexington, Kentucky, and subsequently graduated M. D. at that institution in the days when the illustrious Dr. Benjamin Dudley was the head of the school and in the height of his surgical renown. After Dr. Stevenson had received his medical degree he practiced his profession for a short time in his native State, but in 1826 he set his face for his final residence in Indiana. On returning to the latter State he was favorably impressed with the situation and advantage of Greencastle and the "blue grass" lands which surrounded that town. These considerations induced him to cast his lot with the people of that place, where he remained engaged

A. C. Stevenson

in the practice of his profession and in other pursuits for a period of more than three-score years. It has been said by one familiar with the early history of Dr. Stevenson that he endured all the hardships and struggles common to pioneer settlers of western States. On his arrival at Greencastle he was without money, friends or acquaintance, but he had good health, excellent medical attainments and energy, with determination to succeed, reinforced with all the natural shrewdness and business capacity requisite to bring about that result. Riding a borrowed horse, loaned by a relative, he halted at the village tavern and said to the proprietor: "I am a doctor; my name is Stevenson, from Kentucky. I desire to locate with you, but have no ready means to pay my way; but if you will board me and my horse for the first six months and use your influence for me in the community, I will give you half I make." As there were two physicians from the East well stocked with all the necessary outfit required to practice medicine in that early day, already established in that locality the tavern-

keeper hesitated to accept his proposition, but told him to stay all night with him anyhow and he would think the matter over. Being favorably impressed with his personal address and conversational powers he concluded the following morning to accept the arrangement. Dr. Stevenson was soon actively engaged in the treatment of diseases incident to a new country. It is related that shortly after he began practice he was sent for one night in the dead of winter. The case was urgent and the weather intensely cold. In response to the call he sprang from his bed, hastily dressed, taking the blanket upon which he had slept and wrapping it around him to keep from freezing, rode several miles in that way through the wilderness, reaching the patient in time to save his life from an attack of dangerous illness. Numerous instances might be cited to show that he was a man for emergencies, and he was not required to wait long until an opportunity was presented to show his judgment, decision and ability as a surgeon. A man accidentally injured in falling a tree was seen by the two physicians mentioned, who decided that the case was beyond relief and entirely hopeless. A large crowd of men surrounded the man, and some one suggested sending for Stevenson, but others said it would be useless, as he had no instruments and was too young to know much anyhow. But he was finally sent for, but without recognition on the part of the other physicians. He examined the man carefully, finding him in a collapsed condition, suffering from a compound comminuted fracture of his right femur. He decided that the case was not necessarily fatal, but that the limb must be amputated. This was before the days of chloroform, ether or other anesthetics of modern surgery. While waiting for reaction to occur he sent for a fine-toothed carpenter's saw, which was brought from the house of a distant neighbor, and taking a sharp hunter's knife from the belt of a bystander he proceeded to remove the limb with these crude but efficient instruments in the most scientific manner, and the man made a good recovery. From that time on his skill was recognized and his opinion was valued throughout his section of the State. He rapidly rose to eminence in his profession, and as a physician and surgeon was without a peer. His parents came to him in Indiana, and he, with them, brought from Kentucky the slaves owned by his father and gave to them their freedom, and they remained in Indiana until after the Constitution of 1850 was adopted. That instrument, as he thought, restrained them of liberty and he aided them to a home in the colony of Liberia. At an early period of professional life his practice so frequently brought him in contact with the retail liquor traffic as to compel an investigation of it. This investigation convinced him that drinking was an unmitigated evil and the traffic a most flagrant wrong. In his own life total abstinence had been the rule, and he felt that *moral suasion* was the true remedy. A man of strong will and unquestioned courage, these convictions soon impelled him into conflict with intemperance, and this conflict had been life-long. He it was who delivered the first temperance lecture in his county, and the novelty of it brought friends and foes to hear. Men brought with them whisky in bottles, and drank bumpers to each other and

to the speaker, while he, in nothing daunted, hurled anathemas at the traffic, and deplored the evils of intemperance. Some who heard him reformed, and afterwards became Washingtonians; others continued their evil course, and met the fate of the drunkard. In early life he became addicted to the use of tobacco, and in later years to that of opium to counteract the effect of a painful disease. To evidence what will would do for an evil practice, he declared he would quit both, and he did. He never returned to either again. He often referred to this fact to show that a man could control his appetite for stimulants. Careful investigation and thorough study convinced him that free institutions were wholly dependent on morality, integrity and intelligence. This conviction made him the friend of common schools and higher education. In the securing of Asbury University for Greencastle he was a liberal and active co-worker and contributor; became a member of its first board of trustees; saw ten continuous years of service as such, for three years of which he was the president of the joint board. He was an active participant in securing free schools for Indiana, and did much to bring his adopted county into line in favor of that system. Some educational opinions then entertained by him were in advance of the times. Insisting that the common schools should be thorough and facilities for higher education ample, he, in an address, urged the necessity for schools in which complete training in agriculture and the mechanical arts could be acquired. This brought him in conflict with some leading educators, but time has demonstrated the wisdom of his thought, as "Rose Polytechnic Institute" and "Purdue University" evidence; and he always insisted that the idea then advanced by him would remain of imperfect execution until capital and philanthropy shall equip and thoroughly endow an institution wherein the children of the State who choose may, without cost, acquire any of the skilled mechanic arts and handicrafts without the influence or aid of guilds or trades-unions. Eminent as a physician, his lucrative practice enabled him to acquire a large estate in wild lands. This he did preparatory to returning to agriculture as a profession. From these lands the inferior timber was removed, and the lands set in blue-grass. This, at the time, was considered a waste by many, but he reaped from it afterwards abundant harvest of rich pasture and fat cattle. Though engaged in an arduous profession, he, through study, became a believer in, and an advocate of, the American system of Mr. Clay. This brought him early into political prominence, and as he had the courage of his convictions, the result was that in 1831, 1832, 1844 and 1845 he represented his county in the Indiana House of Representatives, and in the last term was Speaker of the House. In 1839, 1840 and 1841 he was the Senator from his county, and was, in 1846, the Whig candidate for Lieutenant Governor of Indiana. In 1850 he was elected to the convention which framed the Constitution of Indiana in 1851, and was active in the deliberations of that body. His services in this convention closed his political career. He sympathized with labor and with men too intensely to readily reconcile himself to the compromise measures of 1850, and never again became a candidate. In 1860, however, he

earnestly advocated the election of Lincoln, and gave to his administration an earnest, loyal and enthusiastic support. Shortly after the Civil War he was the caucus nominee of his party for United States Senator, with certainty of election to that high office, but declined the honor. In 1843 he removed from Greencastle to his farm two miles east of that town, and gave up his medical practice, as rapidly as his patients would permit. Thenceforward he sought to make agriculture and stock raising his profession, declaring that he could accomplish more in this for himself and his race than in any other calling. For a time he edited an agricultural department in a newspaper, and in this way, as well as in public addresses, sought to introduce better modes of farming. More through his efforts than that of any other, the Putnam County Agricultural Society was organized and continued. He introduced into the county and bred large flocks of Spanish merino sheep, and for a time made sheep husbandry most prominent. While thus engaged, he endeavored to organize an incorporated company for the purpose of importing and breeding Shorthorn cattle. Not succeeding in this, through defects in Indiana law, he began that enterprise alone. In 1848 he purchased and brought into Putnam county the first thoroughbred Shorthorn cattle. In 1847 he was commissioned, by Governor Whitcomb, member of the Indiana State Board of Agriculture. In this position he assisted in putting into operation the State Board proper, and was himself a member of the board for several years, during three of which he was its honored President. In this position his character, ability and energy gave him high rank as a thinker, organizer and friend of agriculture. It was while he was a member of the board that the plans were matured and action taken which have enabled that body and its agencies to accomplish so much for the stock-breeding, agricultural, mechanical and mineral interests of Indiana. And in these labors he assumed his share of responsibility, doing his full portion of the work. The field opened to his observation in this position impressed more fully upon his mind the importance to Indiana interests of thoroughbred Shorthorn cattle. In 1853, at his own instance and cost, he went to England, inspected the principal Shorthorn herds of that kingdom, bought for himself a small herd of the best, and brought them to Putnam county, and this was the first importation of Shorthorns direct from England into Indiana. The result of this venture was profit to himself and great benefit to the stock-breeding interests of Indiana. His prominence as a stock grower caused him to become prime mover in calling the Indiana Shorthorn Breeders' Convention, which assembled at Indianapolis, May 21, 1872. He was made president of the convention, and was afterward president of a national organization of the same kind. His efforts have not been confined to stock growing. He organized and built in 1867 the first gravel road in his county. The line was nineteen miles long, and is yet operated, though its success was originally doubtful. Now in the county are maintained over one hundred and fifty miles of improved roads. From 1840 until about 1880 Dr. Stevenson was a man of wealth; but, wishing to administer on his own state, he divided his lands and goods among

his twelve children, giving to each an equal share, and reserving for himself and wife a modest competency during the remainder of their lives. He was always delighted with employment, and instructed his children to labor, often himself going with them to the fields and by precept and example showing them how to accomplish the best results. He connected himself at an early period with the Methodist Episcopal Church, of which, throughout his long and eventful life, he remained a consistent member. Intellectually, Dr. Stevenson had among his compeers but few equals. Liberal in his views, clear in convictions, logical as a reasoner, far-sighted and methodical in business, firm and persistent in purpose, able and persuasive in argument, careful of the rights of others, of profound thought power, industrious, hospitable, courteous, courageous and generous, a good husband and a kind father, he made firm and lasting friends and led a successful life. He believed his lot had been cast in the best of the ages. He lived to see his county acquire and maintain high rank among the best in the "Hoosier State." His State (when he first knew it, the home of the savage beasts and more savage men), he had seen become sixth in the sisterhood of States; amply supplied with the avenues of trade, over which roll its and the world's commerce; a land of beautiful cities, stately mansions and happy homes; the habitat of two millions of intelligent freemen, and his country become a mighty nation of sixty-five millions of freemen, so indoctrinated and permeated with the principles of self-government and civil liberty that a majority of one commands profound respect and prompt obedience from all.

**STEWART, J. Clark**, of Minneapolis, Minnesota, was educated at the University of Minnesota, from which institution he received the degree of B. S. in 1875. He subsequently studied medicine and entered the College of Physicians and Surgeons, New York City, graduating M. D. in 1884. He is now Professor of Pathology in the University of Minnesota, and Consulting Surgeon to the Northwestern Hospital, Minneapolis. He is an active member of the Minnesota State Medical Society, and Minneapolis Academy of Medicine. Dr. Stewart is also Medical Examiner and Adviser for the New York Life, Fidelity, and Bankers' Insurance Companies.

**STEWART, Jacob Henry**, of St. Paul, Minnesota, was born in Clermont, New York, January 15, 1829, and died in the former city, August 25, 1884. He studied at Yale for three years, and was graduated M. D. from the Medical Department of the University of New York in 1851. Four years later he began the practice of medicine in Peekskill, New York, but in a short time removed to St. Paul, where he acquired the reputation of one of the most skillful physicians and surgeons in that city. In 1856 he was appointed Physician of Ramsey County, Minnesota, and from 1857 until 1863, he was Surgeon-General of Minnesota, also serving as a member of the governor's staff, and as a member of the State senate, in 1858-59. On April 17, 1861, he joined the First Minnesota Volunteers, which was the first regiment that was received by President Lincoln, thus making Dr. Stewart the ranking surgeon in the volunteer service. He remained on the battlefield of Bull Run, was paroled and allowed to care for his wounded at Sudley Church Hos-

pital until they were able to be removed to Richmond, when he was permitted to return home without exchange, "for voluntarily remaining on the battle-field in the discharge of his duty." The sword taken from him when he was made prisoner was given back to him by General Beauregard in recognition of his faithfulness to duty. On his return to Minnesota he was appointed surgeon of the board of enrollment, and held that office until the close of the war. In 1864 he was elected mayor of St. Paul, and was re-elected for four terms to that office. Dr. Stewart was the only Republican that ever held that position in St. Paul, the city being Democratic. From 1865 until 1870 he was postmaster of St. Paul, and was then elected to Congress as a Republican, serving from October 15, 1877, until March 4, 1879. He was appointed Surveyor-General of the State in 1880, and held that office for four years. Dr. Stewart was president of the Minnesota State Medical Society in 1875-76, and was also president of the Board of Physicians and Surgeons for St. Joseph's Hospital, in St. Paul.

**STOKES, William H.**, of Baltimore, was born at Havre-de-Grace, Maryland, January 21, 1812. In 1829 he entered the junior class at Yale; was graduated thence B. A. in 1831; read medicine for a year under Drs. Donaldson and Stewart, of Baltimore; was subsequently a student in the medical department of the University of Maryland, being at the same time *Interne* at the Baltimore Infirmary; and in 1834 received from the University his degree of M. D. Soon after his graduation in medicine he was appointed Resident Physician to the Maryland Hospital, a State institution for the treatment of the insane, one of the first in this country. At the end of a year he resigned this position, and from 1835 to 1840 was engaged in a general practice in Mobile, Alabama, being from 1837 to 1840 Surgeon to the United States Marine Hospital at Mobile. The year of 1841 he spent in professional study in the hospitals of Dublin, London, and Paris, and upon returning to America in 1842 finally established himself in Baltimore, where he has since remained. In 1845 he was appointed Lecturer on Obstetrics and Diseases of Women and Children in the University of Maryland; resigned at the end of a year, and was appointed professor of the same branches in Washington University, Baltimore. In 1850 he resigned this professorship, and since that date has devoted himself exclusively to his private practice and to his duties as Physician to Mount Hope Retreat, a private insane asylum founded in 1840, and for several years thereafter known as Mount Hope Hospital, with which he has been connected since 1843. Dr. Stokes is one of the oldest and most highly esteemed physicians of Baltimore, having been engaged in the practice of his profession for a period of sixty years, and in the city of his residence for a half century. He is a member of the Medical and Chirurgical Faculty of Maryland, and of the Association of Medical Superintendents of American Institutions for the Insane.

**STREET, David**, of Baltimore, Maryland, was educated in medicine at the College of Physicians and Surgeons, Baltimore, from which institution he received the degree of M. D. in 1878. He is now Professor of the Principles and Practice of Medicine and Clinical Medicine in the Baltimore Medical College,

and Dean of the Faculty of that institution. Dr. Street is an active member of the Medical and Chirurgical Faculty of Maryland, Medical and Surgical Society of Baltimore, Clinical Society of Maryland and the Baltimore Medical Association.

**STUCKY, Thomas H.**, of Louisville, Kentucky, was graduated M. D. at the Hospital College of Medicine, Louisville, in 1880. He is now Professor of *Materia Medica* and Therapeutics in that institution and Professor of *Materia Medica* in the School of Pharmacy for Women, Louisville. He is Visiting Physician to Jennie Casseday's Infirmary for Women, and Visiting Surgeon to Louisville City Hospital. Dr. Stucky is an active member of the Kentucky State Medical Association, Louisville Medical Society and Medico-Chirurgical Society of Louisville.

**SUTTON, George**, of Aurora, Indiana, was born in London, England, June 16, 1812, and died June 13, 1886. In 1819 his family immigrated to Cincinnati, but shortly after removed to Franklin county, Indiana, where he received his preliminary education in a country log-school-house. In 1828 he entered the Miami University, where he obtained a more extended knowledge of mathematics and the languages. In 1833 his father returned to Cincinnati, and in the same year he commenced the study of medicine in that city. In 1834 he attended a course of private lectures under Prof. S. D. Gross, then of Cincinnati; was a private student of Prof. John Eberle, and graduated at the Ohio Medical College in 1836. The same year he commenced the practice of his profession at Aurora. He was ex-president of the Dearborn County Medical Society, which was organized in 1844, and rejuvenated in 1867; of the Indiana State Medical Society, and was elected president in 1869. He was ex-President of the Rocky Mountain Medical Association. He was also delegate to the American Medical Association in 1872, and was chairman of the section on meteorology and epidemics. He was a member of the Association for the Advancement of Science; and was delegate from the Indiana State Medical Society to the International Medical Congress at Philadelphia in 1876. He was President of the Board of Trustees of the College of Physicians and Surgeons of Indiana, was Mayor of Aurora for three successive terms, a member of the Board of School Trustees for sixteen years, and filled various other responsible positions, and in every one of them was an exceptionally faithful and efficient officer. Dr. Sutton was a close observer, had a logical mind, and was full of untiring and intelligent industry. His writings, professional and scientific, have perhaps been more abundant and important than those of any other physician in Indiana. It is impossible to enumerate them all, but his contributions to professional literature consist principally of papers as follows: "Enlarged Prostate Gland," 1840; "Epidemic Erysipelas" (black tongue), 1843; "Symptoms and Treatment of Asiatic Cholera," pamphlet, 1849; "Report on Cholera in Indiana from 1849 to 1852—Advanced Views," Transactions State Medical Society, 1853; "Report on Erysipelas," 1856; "Hog Cholera;" "Diversity of Symptoms in Scarlatina Maligna," 1857; "Experimental Researches to Ascertain the Etiology and Pathology of the Epizootic among the Swine," 1858; "Report on

Cholera," Transactions Indiana State Medical Society, 1867 and 1868; "Reports on Hip-Joint Dislocation Reduced by Making a Lever of the Femur upon a Fulcrum Placed in the Groin," Indiana State Medical Society's Transactions, 1876, and the "Reduction of a Dislocation of the Hip-Joint by the Same Method, of Fourteen Weeks and Two Days Duration;" "President's Address to the Indiana State Medical Society;" "On Man's Power over Nature, and Medicine as Means by which He Aids and Controls the Laws of Life," 1870; "Report on the Diseases of Indiana for 1873," State Medical Society; "Investigations of Trichina and Trichinosis," 1874; "Report on Trichinosis to the Indiana State Medical Society, 1875." Besides the above he was the author of papers not purely of a professional character. He was a member of the State Archeological Association of Indiana, and collected a large cabinet of antiquities, fossils and geological specimens. In June, 1838, he married Sarah Folbre, of Aurora, who bore him four sons and a daughter, but only one son and the daughter were living at the time of Dr. Sutton's death. Mrs. Sutton died in 1868.

**TANEYHILL, G. Lane**, of Baltimore, Maryland, was educated in medicine at the University of Maryland, from which institution he received the degree of M. D. in 1865. He is now recording secretary of the Medical and Chirurgical Faculty of Maryland, ex-president of the Baltimore Medical Association, organizer and ex-recording secretary of the Baltimore Academy of Medicine. He is also an active member of the Gynecological and Obstetrical Society of Baltimore, Clinical Society of Maryland, American Medical Association, and International Medical Congress. Dr. Taneyhill is one of the most accomplished physicians of Baltimore, and is widely known in his profession.

**TAUBER, Bernard**, of Denver, Colorado, was graduated M. D. at the Cincinnati College of Medicine and Surgery in 1872, and from the University of Vienna, Austria, in 1875. He was Professor of Diseases of the Throat and Nose in Miami Medical College, Cincinnati, from 1877 until 1879, and was late Professor of Physiology of the Throat and Ear, in the College of Music in the same city. Dr. Tauber is a member of the American Laryngological Association, Colorado State Medical Society, Denver Medical Association, and of numerous other medical organizations of Colorado and Ohio. His practice is limited to diseases of the throat, nose and lungs, in which specialty his skill and success are favorably and widely known.

**TAYLOR, J. Howard**, of Philadelphia, Pennsylvania, born in Kennett Square, Chester county, Pennsylvania, received his academic education at Kennett Square and in West Chester, in the same State, and his medical education in the Medical Department of the University of Pennsylvania, graduating from the latter in March, 1852, establishing himself first at Kennett Square and afterwards in Philadelphia. He has held the positions of Port Physician and Lazaretto Physician, and has had charge of the Municipal Hospital of Philadelphia. He entered the Union Army at the outbreak of the War of the Rebellion; he was first assigned to an organization of three months men as Regimental Surgeon; was subsequently made Brigade Surgeon, and

placed in charge of the Irish Brigade; then Surgeon-in-chief First Division, Second Army Corps; Medical Director Second Army Corps; Medical Inspector Army of the Potomac, and Surgeon-in-Charge of the Summit House United States Army General Hospital. He was subsequently brevetted Lieutenant-Colonel of United States Volunteers. At the close of the Rebellion he returned to Philadelphia, where he has since remained engaged in an active and successful practice of general medicine and surgery, and is now one of the oldest and most accomplished members of his profession in that city.

**TAYLOR, Robert William**, of New York City, N. Y., was born in London, England, August 11, 1842. He acquired his literary and academic education in Grace Church School, Newark, New Jersey, and enjoyed also the advantage of private tutors in classics and foreign languages; he subsequently was prepared for a professional career in the College of Physicians and Surgeons, New York, under the preceptorship of Dr. Willard Parker, graduating in March, 1868. While giving attention to general practice, he has made a specialty of the study and treatment of syphilis, skin diseases, and genito-urinary diseases, and for six years was Surgeon to the Department of Venereal and Skin Diseases of the New York Dispensary. He is a member of the Dermatological Society of New York, of the County Medical Society of New York, of the Neurological Society, of the Medical Journal Association, American Association of Genito-Urinary Surgeons, and of the American Dermatological Association; was the first treasurer of the Dermatological Society of New York, and one of the first incorporators and members thereof, corresponding secretary one year, and president two years (during one of these years was also vice-president of the American Dermatological Association in its first year, secretary in its second); and has been secretary and trustee of the Medical Journal Association. He has served as Physician to the Department of Skin Diseases of Bellevue Hospital Dispensary; was for three years Professor of Diseases of the Skin in the Woman's Medical College, New York, and was formerly Professor of Skin Diseases in the University of Vermont. He is now (1893) Professor of Venereal Diseases in the College of Physicians and Surgeons, New York City; Surgeon to the Genito-Urinary Division of Bellevue Hospital, and to the Venereal Division of the New York Charity Hospital. For the past several years he has been the reader for the *Medical Record* of New York, of works upon skin and venereal diseases, and has contributed numerous editorials to that journal. In 1874 he was elected corresponding member of the Gesellschaft für Natur und Heilkunde zu Dresden, and corresponding member of the Meigs and Mason Academy of Medicine of Ohio. He has written numerous essays and reviews upon skin diseases, syphilis and genito-urinary affections, and has also published a work upon osseous lesions of syphilis in infants and young children. His principal essays are as follows: "Serpiginous Tubercular Syphilida," "On the Papulæ Syphilitides," "On Dactylitis Syphilitices," "A Clinical Lecture on the Treatment of Eczema," "On the Etiology of Infantile Eczema," "On the Xeroderma of Hebra," "On Sciatica as Caused by Syphilis,"

"On Syphilis of the Nervous System," "Clinical Notes on Lichen Planus," "On Contagious Impetigo," "Transmission of Syphilis in Circumcision," "On the Hereditary Transmission of Syphilis," "On the Treatment of Pruritis Cutaneous," which have appeared in the *Boston Medical Journal*, *New York Medical Journal*, *Archives of Dermatology*, *Archives of Science and Practical Medicine*, *American Journal of Medical Science*, *American Practitioner*, *Philadelphia Medical Times* and *New York Medical Record*. He has written the quarterly reports on general questions in syphilis for the *Archives of Dermatology* since its foundation, and also many of the resumé's of foreign articles in the early volumes of the *American Journal of Dermatology and Syphilis*.

**TAYLOR, William H.**, of Cincinnati, Ohio, was graduated M. D. from the Medical College of Ohio in 1858. He is now Professor of Obstetrics in the Miami Medical College, Cincinnati, and Dean of the Faculty of that institution. He is also Obstetrician to the Cincinnati Hospital. Dr. Taylor is an active member of the American Medical Association, American Association of Obstetricians, Ohio State Medical Society and Cincinnati Medical Society. He is one of the oldest and most accomplished accoucheurs in his city, and widely known in his profession.

**TAYLOR, William W.**, of Memphis, Tennessee, was educated in medicine at Bellevue Hospital Medical College, New York, from which institution he obtained the degree of M. D. in 1876. He is now Adjunct Professor of Obstetrics and Diseases of Children in the Memphis Hospital Medical College and Gynecologist to Lucy Brinkley Hospital. Dr. Taylor is a member of American Medical Association, Memphis Medical Society and the Tri-State Medical Society of Tennessee, Georgia and Alabama.

**TEBEAULT, Christopher H.**, of New Orleans, Louisiana, was graduated M. D. at the Medical Department of the University of Louisiana, New Orleans, in 1862. He was Health Officer of New Orleans during 1861 and 1862. During the Civil War he attained the rank of Brigadier-General, and served in the capacity of Assistant Surgeon-General on the staff of Gen. J. B. Gordon, Confederate States Army. After the close of the Rebellion he was chosen Professor of Diseases of Women and Children in the late Charity Hospital Medical College. He is an active member of the Louisiana State Medical Association, and is one of the most accomplished physicians of New Orleans.

**TENNEY, John A.**, of Boston, Massachusetts, was graduated M. D. at Jefferson Medical College, Philadelphia, Pa., in 1883, since which time he has devoted special attention to the study and treatment of diseases of the eye and ear, in which field of practice he has gained an excellent reputation. He is now Professor of Ophthalmology and Otology in the College of Physicians and Surgeons, Boston, and is Superintendent of the Suffolk Dispensary, and Ophthalmic and Aural Surgeon in that institution. Dr. Tenney is an active member of the Massachusetts Medical Society, Boston Therapeutic Society and other medical organizations of his city.

**TERRIBERRY, George W.**, of Paterson, New Jersey, was appointed Medical Cadet, United States Army, during the Civil War,

serving in that capacity during 1863 and 1864, and became Acting Assistant Surgeon United States Army during the last year of the Rebellion. He then entered Bellevue Hospital Medical College, New York, from which institution he was graduated M. D. in 1866, since which time he has been actively and successfully engaged in the practice of general medicine and surgery. He is now Medical Examiner and Adviser for several of the leading life and accident insurance companies of this country, and for the past twelve years has been Division Surgeon, with the rank of Colonel, in the National Guards, State of New Jersey. He is also an active member of the Passaic County District Medical Society and New Jersey State Medical Society.

**THACHER, James K.**, of New Haven, Connecticut, died April 21, 1891, aged fifty-four years. He was the eldest son of the late Professor Thomas Thacher, of Yale, and a graduate of that University in 1869. Ten years later he took his medical degree from the Medical Institute at New Haven. The interval had been filled by several series of original investigations regarding comparative anatomy and physiology; part of the time being, also, taken up by his duties as a college instructor. The Transactions of the Connecticut Academy of Sciences contained the results of his studies, which attracted the attention of the scientists in all parts of the world. He claimed that the limbs of the higher vertebrates were developed from the fins of fishes, a view sufficiently novel at the time he advanced it, but which has since been strengthened by later investigations. He became Professor of Physiology in the medical department of Yale University soon after graduating in 1879, and engaged in general practice. He received an appointment in the New Haven Hospital, and the chair of clinical medicine was added to that of physiology. He was one of the medical editors of the new Century Dictionary.

**THOMPSON, John H.**, of Kansas City, Missouri, was educated in medicine at the College of Physicians and Surgeons, New York City, from which institution he received the degree of M. D. in 1877. Since which time he has devoted special attention to the study and treatment of diseases of the eye and ear. He is now Clinical Professor of Ophthalmology and Otology in the Kansas City Medical College. He is a member of the American Medical Association, Missouri State Medical Society, Kansas City Academy of Medicine, and Jackson County Medical Society, State of Missouri.

**THOMPSON, W. Clinton**, of Indianapolis, Indiana, was born in Zeillienople, Butler county, Pennsylvania, December 21, 1812. He was the grandson of James Thompson, a soldier in the War of the Revolution, a man who weighed 300 pounds, and remarkable for his feats of great strength. The parents of Dr. Thompson having died during his childhood, he was thrown entirely upon his own resources in obtaining his early education, but with that energy and earnestness that have characterized him through life this was accomplished, and he became qualified for the study of the profession to which he has long been an honor. He entered the Medical College of Ohio in 1837, and was graduated M. D. from that institution in 1839. He began the practice of medicine at St. Charles, Missouri, where he

remained until 1847. He then established himself at Indianapolis, where he has been engaged in the general practice of his profession for a period exceeding that of any other living physician in that city. On the outbreak of the Civil War he was appointed brigade surgeon, and attached to the armies of McClellan and Pope in their campaign through Virginia. He resigned this position by reason of failing health soon after the battle of Antietam. During his extended residence in Indianapolis, Dr. Thompson has been noted for his unblemished character as a citizen and excellent reputation as a skillful and successful physician. He has enjoyed the confidence and friendship of all the governors of his State, without regard to party affiliation, and was their family physician as long as he remained in active practice. He was not only exceedingly popular in the line of his chosen avocation in the pursuit

*W. C. Thompson.*

of which he has accumulated a considerable fortune, but his genial character and interest in public affairs have been such as to demand his service in filling many offices of trust, honor and responsibility. He was for several years a member of his city council, and has served sixteen years as the representative of his county in the State Senate, serving as chairman of the committee on insane, and exercising an important influence in the enactment of laws affecting the interest of his city, his county and the people of Indiana.

**THOMPSON, W. Gilman**, of New York City, was educated in medicine at the College of Physicians and Surgeons, New York City, from which institution he received the degree of M. D. in 1881. He is now Professor of Physiology in the New York University Medical College, and Visiting Physician to the New York and Presbyterian Hospitals. He is an active member of the Association of American Physicians, American Physiological Society, New York Academy of Medicine, New York Medical and Surgical Society, New York Society for the Relief of Widows and Orphans of Med-

ical Men, and of other leading medical organizations in that metropolis.

**TIFFANY, Flavel Benjamin**, of Kansas City, Missouri, was born on the shores of Oneida Lake, New York, April 28, 1846, of Scotch-English parentage. When he was an infant, his parents emigrated, via the chain of northern lakes, to Rutland, Dane county, Wisconsin, where the first seven years of his life were spent, the last summer of which he attended the district school. From Rutland the family went to Baraboo, in the same State, a little settlement in the dense primeval forests, where the grizzly bear was often seen and the deer-lick the chief attraction on moonlight nights. Here he again had the advantage of a few months' district school. The following year his parents, desirous of availing themselves of the generosity of "Uncle Sam" in securing more lands for the family, took with them the household effects in three "prairie schooners," and, with a few head of cattle and horses, started for the rolling prairies and sky-tinted waters of Minnesota. After several weeks of romantic journeying through forests inhabited only by wild animals and the red man, over broad prairies of rich meadows bedecked with large varieties of most beautiful wild flowers, and groves of native fruits, by the side of rippling rills and laughing waterfalls of this picturesque west, they finally reached the shores of Rice Lake, a beautiful sheet of water, with dense forests on one side and the rolling prairies on the other. The lake yielded a rich field of rice, which the Indians came every fall to harvest. It was here that the family pitched their tents and laid claim to their allotted portion of our government's domain. They were the first, and for some weeks the only white family within a fifteen-mile circuit. At this time there were encamped in the forests across the lake fifteen hundred Indians. Frequently did the subject of this sketch join the little Indian boys in their wild sports, especially with the bow and arrow. Wild game—geese, ducks, brants, loons, and other birds sported on these waters. The air was dense with water birds, especially in the fall of the year; deer, elk and buffalo were frequently seen roaming over the prairies. The woods were full of game. Here one constantly heard the chattering of the squirrels, the drum of the partridge, whimpering of the coon, and barking of the foxes. Much time was spent with the fowling piece, traps and fishing-tackle, which afforded rare sport as well as opportunity for observations of nature. Several other white families came during the following summer. A school was started, which the children attended two terms; but the next winter the family was bereaved of their mother, and little interest after this was taken in the education of the children. The father soon after married a widow with two boys, and soon there were three families in one. Financial reverses came, and schooling was neglected; a few months' study, however, in different years was gained, but it was of a desultory nature. The Rebellion was now on, and at seventeen years of age young Tiffany enlisted as a recruit in Battery B, Fourth Minnesota Light Artillery. He served until the close of the war and then returned to his adopted State. With the bounty money received as a soldier he entered school at Faribault, Minnesota, living with the family of Dr. N. H. Bemis, a

venerable and able physician. Through precept and example of Dr. Bemis and the home influence of this family, he received the first incentive to study medicine. At Faribault he continued his education for several years, doing chores for his board, and working during the vacations, until he gained a certificate to teach school. After following this avocation for two years he then entered the State University of Minnesota, at Minneapolis. During his stay at the University he also read medicine with his preceptor, Dr. Johnson, at the same time earning his way by giving private instructions, and by manual labor. From stint of food and over-work his health gave way ere he had quite completed the literary course; and so without taking the degree of A. M. which he so much desired, he finally, in 1872, entered the Medical Department of the State University of Michigan, at Ann Arbor, at which school he received the degree of M. D. in 1874. After graduating he first located at Grand Haven, Michigan, but his health not being good, from study and privation, he returned again for a vacation to Minnesota. Here he met an old acquaintance and a good friend, Mrs. Esther Fuller, a refined and estimable lady, who kindly assisted in equipping him with instruments, and the necessary outfit to practice his profession. From Minnesota he went to East St. Louis, but only for a short time, as his means would not admit of his remaining long enough to build up a practice in a large city; so after a few weeks' trial, he again returned to Minnesota, pawning his trunk and the few instruments he had to secure transportation. In the fall of 1874 he located in the little town of Medford, in the latter State, where he soon built up a lucrative practice, riding day and night; and in about a year and a half he had accumulated sufficient funds to pay off all indebtedness and have a respectable bank account. In the fall of the year 1876, only a little more than a year and a half from the date of his graduation, he carried into effect his great ambition to go to Europe, and there pursue the study of medicine in some of its special branches. In November, 1876, he started for London. In the British metropolis he pursued the study of the eye, ear, and throat for nearly twelve months. The following year he spent in Paris, Berlin, and Vienna, studying the German and French languages, in connection with these same branches of medicine. At Paris he met Olive E. Fairbanks, a highly educated, refined and cultured lady, whom he afterward married in 1879. In the fall of 1878 he located at Kansas City, Missouri, limiting his practice to the diseases of the eye, ear and throat. In 1880 he took the initiatory steps of founding the Kansas City University, in which he was elected to the chair of Ophthalmology, Otology, and Microscopy, which position he held up to the year 1893, when he resigned from the branch of Microscopy. In the fall of 1887 he again, with his wife, went to Europe, where he spent nearly a year in the several eye and ear clinics with many of the most prominent oculists and aurists of that country. He has contributed many articles to medical literature, notably on "Glaucoma, its Etiology," and on "Cataract." To him is due the priority of speaking of skin grafts as a cure for cancer of the orbits and eye-lids. His work on the anomalies of the Muscles and Refraction of the Eye is now in

press, and is to be issued in December, 1893. He is a member of several State medical societies, of the American Medical Association, American Microscopic Society, Pan American Medical Congress, and the International Medical Congress.

**TIFFANY, Louis McLane**, of Baltimore, Maryland, was born in Baltimore October 10, 1844. His literary and classical education was obtained at the University of Cambridge, England, whence he graduated A. B. in 1866. He pursued his medical studies at the University of Maryland; graduating M. D. in 1868, and settling in Baltimore, where he has since remained, engaged in an extensive and successful practice of medicine, but of more recent years devoting especial attention to surgery, in which field he has gained a wide reputation. He is a member of the Medical and Chirurgical Faculty of Maryland; has been Chairman of the Surgical Section of the Baltimore Medical Association, and President of the Baltimore Clinical Society. He is also a member of the Baltimore Medical and Surgical Society. He has contributed important articles to medical journals. He has held the position of Resident Physician at the Baltimore Almshouse; Dispensary Physician to the University of Maryland; Demonstrator of Anatomy in the same institution; Professor of Anatomy in the Maryland Dental College; and has been one of the visiting medical officers to the Baltimore City Almshouse; Surgeon to Baltimore Infirmary, and Professor of Operative Surgery in the University of Maryland.

**TODD, Levi L.**, of Indianapolis, Ind., was born in the latter part of the year 1830, near Lexington, Kentucky, in the region where his ancestors had lived since the Revolutionary times, his grandfather, General Robert Todd, being an associate of Boone, Harrod, Bryan and others in the early settlement of the State. His grandfather on his mother's side, Captain Nathaniel Asby, came from Virginia soon after the close of the seven years' war, through which he served, and settled in the same locality. His father, Judge Levi L. Todd, removed to Marion county, Ind., in 1834, settling near Indianapolis, where his long and useful career was ended by death in 1867. The subject of this sketch was the youngest of a family of nine children, all but two of whom attained adult age. His early life seems to have been of unusual toil and labor on his father's farm and marked by many vicissitudes and trials; even more than the ordinary share had fallen to his lot of the occurrences which so painfully emphasize life; still he seems to have regarded it as an uneventful one in incidents of interest to others. He worked hard during his boyhood days and up to the age of twenty-two years, when he left the farm for the last time. He had, however, availed himself of the ordinary winter-time opportunities of country schools. At the age of seventeen he took two terms in the Danville Seminary, and after that a year and a half in Wabash College. He was a student of medicine the first year with Dr. David Todd, of Danville, Ind., and the remainder of the time with his brother, the late Dr. R. N. Todd. His first course of medical lectures was at the University of Louisville, during the time when Gross, Flint and Silliman were connected with that institution, and graduated there in March, 1856. Dr. Todd was married in the following

winter to Miss Susan G. Todd, of Paris, Kentucky, and in the spring of 1858 removed to Paris, Illinois, where he lived and practiced his profession over a period of sixteen years. After the second year he was employed almost constantly, and much of the time his professional service was pressing and hard to endure, with bad roads and a climate abounding in the worst changes that western weather could supply. As we are informed, he suffered a good deal from nervous disorders incident to exposure and over-work. Dr. Todd removed to Indianapolis from Illinois in January, 1874, and during the whole time up to the present has been in the continuous practice of his profession. He was appointed Medical Examiner for Pensions at Paris, Illinois, during the late war, also Medical Inspector of drafted men. He was a member of the Edgar County Medical Society, and the Esculapian Society of the Wabash Valley, and was president and secretary of the latter. He has also been a member and an occasional attendant of the meetings of the American Medical Association, since about the year 1871. He is a member and ex-president of the Marion County Medical Society, Indianapolis, and to which he has contributed a number of papers, some of which have been published in the Transactions of the State Society. In the professional career of Dr. Todd, it will be observed that every energy was called into play in his chosen calling, with that earnestness of endeavor and will power which are the salient and strong points that determines an individuality and inspires confidence in one as a safe and conservative practitioner. Any fulsome praise or extended eulogy of the professional or social life of the subject of this sketch would be superfluous here, or in any community where he is known. The steady, persistent fondness for his profession is a marked characteristic of his every day contact with the infirm and suffering that come within range of his council and medical skill. In the varied vicissitudes of his life filled with a multiplicity of cares, he has found time, like his distinguished brother, the late Dr. R. N. Todd, to cultivate his tastes in literary pursuits; as evidenced by the fact of his active and retentive memory in calling up quotations from many distinguished authors, both of prose and poetry. Whittier, Oliver Wendell Holmes and Burns are seemingly his favorite authors. Dr. Todd is in the full fruition of his professional life and perfect manhood; the frosts of accumulated years have settled gently upon him, but have not ruffled the facial lines of a wholesome good humor. He is still found in the front rank among his contemporaries, and capable of accomplishing a large amount of labor in the pursuit of his life work, the cure of disease, the relief of human suffering, and the success and elevation of the medical profession.

**TODD, Lyman Beecher**, of Lexington, Kentucky, was born near that city April 16, 1832. His grandfather, General Levi Todd, came from Virginia in early, perilous times; he was a man of ability and learning, and was the first clerk of Fayette county, Kentucky. His father, James Clarke Todd, was sheriff of the same county for sixteen years. Dr. Todd graduated at Centre College, Danville, Kentucky, June, 1850, and at the Jefferson Medical College, Philadelphia, in 1854. He imme-

diately afterward settled in Lexington, and during the same year was married to Miss Sarah F. Swift, of that city. In 1857 he was elected City Physician. He is a member of the Lexington and Fayette County Medical Society, of the Kentucky State Medical Society, and was Treasurer for six years, being elected in 1869. He has contributed articles on professional subjects to Professor Gross' *Medico-Chirurgical Review*, and to the *Louisville Medical Journal*, and other periodicals. He was postmaster at Lexington from 1861 to 1870, and in 1874 was appointed Surgeon to the United States military forces stationed at Lexington. Dr. Todd is an accomplished physician and surgeon, and his professional skill has been widely known throughout his State for a period of forty years.

**TODD, Simeon S.**, of Kansas City, Missouri, was born near Vevay, Indiana, March 10, 1826. He is a descendant in the fourth generation of John Todd, who immigrated from Scotland to Virginia, about 1740. Having received an English education and some knowledge of the classics, he entered the Indiana Medical College; was graduated thence M. D. in February, 1849; practiced in Kentucky until 1854; in California, until 1865, and since September, 1865, has been established at Kansas City. In September, 1861, he was commissioned surgeon of the Second, and subsequently of the Fourth California Infantry; was successively detailed Surgeon in charge of the Presidio Hospital, San Francisco; of the Hospital at Fort Humbolt, and of Drum Barracks, in Los Angeles county, and served until the end of the war. While engaging in a general practice, he has given especial attention to gynecology, and has successfully performed nearly all the leading operations in this branch of his profession, such as removal of uterine fibroids, restoration of the uterine cervical canal, ovariectomy extirpation of the lower two bones of the coccyx for coccydynia, with complete relief, and operations for vesico-vaginal and recto-vaginal fistula. In 1869 he was one of the founders of the Kansas City College of Physicians and Surgeons, and formerly dean of the Faculty and Professor of Obstetrics and Diseases of Women, and is now *Emeritus* Professor of Gynecology in that institution. He is a member of the Kansas City District Medical Society, an honorary member of the Kansas State Medical Society and of the Missouri State Medical Society—vice-president of the latter in 1872, and president in 1873—a corresponding member of the Boston Gynecological Society, and a member of the American Medical Association. Of his professional publications may be mentioned: "Intra Uterine Injections in Uterine Hemorrhage, 1870; "An Unappreciated Impediment to Labor in the Second Stage," 1871; "Complete Occlusion of the Os Uteri in Labor," "Extirpation of the Coccyx," 1874; "Atresia Uteri," 1876; and a report "On the Use of Anesthetics in Labor," 1875, published in the Transactions of the Missouri State Medical Society.

**TOWNSEND, Wisner R.**, of New York City, was educated in medicine at the College of Physicians and Surgeons, New York City, from which institution he received the degree of M. D. in 1880, since which time he has devoted special attention to orthopedic surgery. He is now Assistant Surgeon to the Hospital for Ruptured and Crippled; Orthopedic Surgeon to the New York Infant Asylum; Consulting

Surgeon to Bayonne Hospital, and Lecturer on Orthopedic Surgery in the New York Polyclinic. He is an active member of the American Orthopedic Society, New York Academy of Medicine, and of numerous other medical organizations of New York City.

**TUHOLSKE, Herman**, of St. Louis, Missouri, was graduated M. D. from the Missouri Medical College, St. Louis, in 1870, since which time he has devoted special attention to the practice of general surgery. In this field of his profession his skill and success has gained for him eminent distinction. He is now Professor of Surgical Pathology and Clinical Surgery in the Missouri Medical College, and also in the St. Louis Post-Graduate School of Medicine. He is Consulting Surgeon to St. Louis City Hospital and South St. Louis Dispensary; Surgeon to Martha Parsons Free Hospital for Children and the St. Louis Polyclinic and Hospital. Dr. Tuholske is an active member of the American Medical Association, Southern Surgical and Gynecological Association, St. Louis Medico-Chirurgical Society and other leading medical and surgical organizations of this country.

**TYREE, William C.**, of Kansas City, Missouri, was graduated M. D. at the Kansas City Medical College in 1876. He subsequently attended the University Medical College, New York City, and received an *ad eundem* degree from that institution in 1878, since which time he has devoted special attention to the treatment of diseases of the eye and ear, in which specialty he has attained eminent success. He is now Professor of Ophthalmology and Otology in the Kansas City Medical College, and is an active member of the American Medical Association, Missouri State Medical Society, Kansas City Academy of Medicine, and other leading medical organizations of this country.

**VALLE, Jules F.**, of St. Louis, Missouri, was graduated at the Missouri Medical College, St. Louis, in 1885. He is now Consulting Gynecologist to St. Louis Female Hospital, Physician to St. Luke's Hospital and the Missouri School for the Blind. Dr. Valle is an active member of the St. Louis Medical Society, St. Louis Chirurgical Society, and other medical and social organizations of that city.

**VANDENBERGH, Frank P.**, of Buffalo, New York, was educated in medicine at the University of Buffalo, New York, from which he received the degree of M. D. in 1884. He is now Professor of Chemistry in that institution, and Chemist to the City of Buffalo. Dr. Vandenberg is an active member of the American Public Health Association, American Clinical Society, Society of Chemical Industry (England), and the Medico-Legal Society of New York.

**VANDERPOEL, Waldron B.**, of New York City, was educated in medicine at the College of Physicians and Surgeons, New York, from which institution he received the degree of M. D. in 1879. He is now Attending Physician to Demilt Dispensary, and Visiting Physician to Randall's Island Hospital. He is an active member of the New York Academy of Medicine, and New York County Medical Society. He is engaged in the general practice of medicine, and is an accomplished physician and of recognized skill and ability.

**VAN HARLINGEN, Arthur**, of Philadelphia, Pennsylvania, was born in that city October

25, 1845. He studied medicine in the Medical Department of the University of Pennsylvania, graduating in 1867, settling in Philadelphia, and devoting exclusive attention to dermatology. He is a member of the College of Physicians, and has contributed to different medical journals a number of articles on subjects connected with diseases of the skin. He was a delegate to the International Medical Congress, held in Philadelphia, 1876, and was secretary of the section on dermatology. He is also a member of other medical organizations of this country, and is a recognized authority in his special field of medicine.

**VAN RENSSELAER, Howard**, of Albany, New York, was educated in medicine at the College of Physicians and Surgeons, New York City, from which institution he received the degree of M. D. in 1884. He is now Lecturer on *Materia Medica* in the Albany Medical College; Visiting Physician to St. Peter's Hospital; also to the Hospital for Incurables, Home of the Friendless, and is a member of the dispensary staff of the Child's Hospital. Dr. Van Rensselaer is an active member of the Albany County Medical Society, State of New York.

**VAN RIPER, Cornelius S.**, of Paterson, New Jersey, was educated in medicine at the College of Physicians and Surgeons, New York City, from which institution he received the degree of M. D. in 1859. Of late years he has devoted special attention to the treatment of diseases of women, and is now Attending Gynecologist to Paterson General Hospital, and also to St. Joseph's Hospital. Dr. Van Riper is Medical Examiner and Adviser for the Mutual Life, New York Life and Washington Life Insurance Companies, and is a member of the American Medical Association and the Passaic County District Medical Society, State of New Jersey.

**VANSANT, Eugene L.**, of Philadelphia, Pa., was graduated M. D. at Jefferson Medical College in 1884. He is now Lecturer on Clinical Medicine and Demonstrator of Normal Histology in that institution. He is also Physician to Philadelphia Hospital and Rhinologist and Laryngologist to Howard Hospital. Dr. Vansant is an accomplished physician, an able clinical teacher and an active member of numerous medical organizations.

**VAN VOORHIS, Isaac**, of Fort Dearborn, Illinois, was born in Fishkill, New York, February 22, 1790, and was slain by the Indians at the above fort August 15, 1812. Referring to this event Dr. N. S. Davis, in "History of the Medical Profession and Medical Institutions of Chicago," recently published in the *Magazine of Western History*, says: "In July, 1803, Captain John Whistler, with a company of United States soldiers, built the original Fort Dearborn, on the south side of the Chicago river, near its mouth. When Captain Nathan Heald succeeded Captain Whistler in command of the garrison at Fort Dearborn in 1810, the name of Dr. John Cooper appears on the list of officers as Surgeon's Mate, but he only remained there two or three months, and on leaving resigned his commission and retired from the army. He was succeeded early in 1811 by Dr. Isaac Van Voorhis." The subject of this sketch received his early education at the Academy of Newburg, Orange county, New York, and subsequently entered

upon the study of medicine; soon after the completion of which he was commissioned as Assistant Surgeon in the United States Army and sent to Fort Dearborn. He is represented as having been a young man of excellent qualities, but his prospective usefulness was blighted and his military services terminated by being one of the victims of the well-known Indian massacre that took place August 15, 1812. "Four or five thousand hostile Indians had gathered in the vicinity of the fort, and when the garrison, consisting of fifty-four men and a few officers, attempted to retreat to Fort Wayne they were attacked by the Indians, and Captain Wells, Ensign Ronan, Surgeon Van Voorhis and twenty-six privates were slain, together with twelve children and all the male residents, except Mr. John Kinzie and his two sons. The original fort having been thus abandoned and destroyed in 1812, what few white inhabitants remained were left without the services of any member of the medical profession until 1816, when the fort was rebuilt and occupied for military purposes.

**VAUGHAN, George Tully**, of Washington City, D. C., was born in Nelson county, Virginia, June 27, 1859. He is of Welsh descent, and a son of Dr. W. L. Vaughan.

*George Tully Vaughan*

He was educated at Kenmore High School, and read medicine under the direction of his father until he entered the Medical Department of the University of Virginia, from which he graduated June 27, 1879. He continued his medical studies in New York City, and graduated from Bellevue Hospital Medical College in 1880. Dr. Vaughan located the same year at Lowesville, Virginia, where he practiced his profession until 1886, when he moved to Farmville, in the same State, and was associated in practice with Dr. James L. White. In 1885 he attended lectures at the New York Polyclinic, paying special attention to general

surgery. In January, 1888, he was appointed assistant surgeon in the marine hospital service, and assigned to duty at Boston, Massachusetts. He was afterwards in command of the service at Cairo, Illinois, and Evansville, Indiana. In February, 1892, he was promoted to the grade of passed assistant surgeon and ordered to Washington, District of Columbia, for duty as assistant to the Surgeon-General. Dr. Vaughan has performed amputation at the hip-joint for railway injury, which was followed by death from shock; ligation of right subclavian artery for aneurism of the arch of the aorta, Dr. Young, of Evansville, at the same time ligating the right common carotid, resulting in death on second day from asthenia. His other operations have been such as Ertlender's for pleural empyema, trephining mastoid process, and other parts of the skull, operations for abscess of the liver, and for various requirements in minor surgery. Dr. Vaughan is a member of the Medical Society of Virginia, of the Americal Medical Association, and honorary member of the Vanderburg County Medical Society, Indiana. His more important contributions to medical literature consist of a "Report of 112 Cases of Obstetrics with Use of Chloroform in Labor," "Locomotor Ataxia," "Case of Hermaphroditism," "Operations for Radical Cure of Hernia," "Fracture of Frontal Bone, no External Depression," "Organic Stricture of Urethra, Perineal Section," and "Abscess of Liver, Laparotomy, Recovery." In 1883 he married May Townsend, daughter of W. G. Venerable, Esq., of Farmville, Virginia.

**VEDDER, Alexander M.**, of Schenectady, New York, was born in that city January 15, 1814, and died in New York City December 29, 1878. He was a direct descendant of Harmanus Albertse Vedder, who immigrated to this country from Holland in 1630 and became the progenitor of one of the oldest Dutch families of New York. He received his literary education at Union College, Schenectady, and pursued his medical studies at the University of Pennsylvania, where he graduated M. D. in 1839. In 1838 he was associated with the late Dr. J. K. Barnes, Surgeon-General United States Army, as Resident Physician of Blockley Hospital, Philadelphia. He settled in practice in his native city. In 1840 he became Lecturer at Union College, and for twenty years he held the chair of Anatomy and Physiology in that institution. In 1856 he was elected Mayor of Schenectady by the Republican party. During the war between the States he held the office of Examining Surgeon of the Eighteenth Congressional District, and in 1873 he became one of the Curators of the Albany Medical College. He was also founder, director or trustee of every institution of note in his native city. As early as 1838 he wrote an interesting paper on "Morbus Brightii" for the *Medical Intelligencer*, which was the first American contribution to the literature of Bright's disease, and in 1875 he wrote three important articles entitled "Embolism of the Axillary Artery," "Embolism of the Central Artery of the Retina," and "Tracheotomy in Diphtheria," all of which were published in the Transactions of the New York State Medical Society. Dr. Vedder gained a wide reputation in the treatment of diseases of the chest, and was one of the first physicians in the United States to acquire a comprehensive

knowledge of auscultation and percussion. He was a member of the Pathological Society of Philadelphia, of the New York State Medical Society, and of the Schenectady County Medical Society, and was president of the latter in 1870. He was elected delegate to the International Medical Congress held in Philadelphia in 1876. He was twice married; the first time to Catharine M. Viele, of Hoosick, Rensselaer county, New York, and after her death to Hannah M. Wilkinson, of New York City.

**WALES, John Patten**, of Wilmington, Delaware, was born there in January, 1831, his father being the late United States Senator John Wales. After a literary training in the schools of Wilmington and New Jersey Collegiate Institute, he began studying medicine under Dr. L. P. Bush, of Wilmington. He was graduated from the Medical Department of University of Pennsylvania in 1852. For a year thereafter was Hospital Physician for Baltimore City and County Almshouse. In 1853 he began practice near his native city. On the outbreak of the war he was offered a surgeoncy, but preferred to become a soldier, and was commissioned captain in the Seventeenth United States Infantry, May, 1861, and was first stationed at Fort Preble, Portland, Maine, where the regiment was organized; then sent to McClellan's army, and attached to Fifth Army Corps. He served through all the fighting on the Peninsula, the second Bull Run, Antietam, and all the campaigns of the Army of the Potomac to the close of the war, having command of his regiment at and after the battle of Fredericksburg. At the end of the war it scarcely mustered men enough for a full company. In 1865 he resigned his commission and returned to Wilmington, Delaware, where he has since remained engaged in a successful practice of his profession.

**WALES, Philip Skinner**, of Washington, District of Columbia, was born February 27, 1837, in Annapolis, Maryland. His parents were natives of that State. He was educated at the Baltimore City College, and the University of Maryland, graduating at the latter in March, 1856, after which he entered the medical department of the University of Pennsylvania, from which he graduated in March, 1860. Settling at Baltimore, he removed first to Philadelphia and afterwards to Washington, District of Columbia, his present residence. He entered the United States Navy as Assistant Surgeon August 7, 1856; was commissioned Surgeon October 12, 1861. Throughout the Civil War he was actively engaged, having organized and held charge of the United States Naval Hospital at New Orleans during the operations of Admiral Farragut's fleet in the Mississippi river, superintended the United States Naval Hospital ship at the capture of the forts defending Wilmington, North Carolina, and served as Operating Surgeon at the United States Naval Hospital at Portsmouth, Virginia, pending the military operations around Fortress Monroe. He was commissioned Medical Inspector United States Navy June 30, 1873, and appointed General of the Navy and Chief of the Bureau of Medicine and Surgery on January 26, 1880, serving until March 27, 1884. When President Garfield was shot he assisted in attendance for a short time. While he was Chief of the Bureau of Medicine unscrupulous clerks in his office

contrived to defraud the government, and he was tried by court-martial and suspended for five years for neglect of duty, though acquitted of all real responsibility for the acts of his subordinates. He is a member of the Academy of Natural Sciences, the American Medical Association, and the Gynecological Society of Boston. His contributions to medical literature comprise: "Surgical Operations and Appliances," 1867; "A New Method of Controlling the Velum Palati," 1875; "A New Rectal Dilator and Explorer," 1877; papers in the *American Journal of Medical Sciences* on "Cerebro-Spinal Meningitis," "Amputation of Shoulder-Joint," "Fracture of Lower Jaw," "Gunshot Wound of Stomach," "Ligature of the Femoral Artery," "Fracture of Thyroid Cartilage," "Operation for Hydrophthalmia," and "Aneurism of the Heart;" a series of papers in the *Philadelphia Medical and Surgical Reporter* on "Instrumental Diagnosis," with a paper entitled "Description of a New Endoscope;" a paper in the *New York Medical Record* on "Traumatic Tetanus;" and numerous reviews in various medical journals. He has in preparation a large work on medical science. He was married to Mary Gray, of Philadelphia, in November, 1860.

**WALKER, Henry O.**, of Detroit, Michigan, was born in that city December 18, 1843. His parents were natives of Yorkshire, England. His preliminary education was acquired at the Detroit High School and Albion College, Michigan. He prepared for a professional career in the Medical Department of the University of Michigan, and Bellevue Hospital Medical College, New York, graduating at the latter institution February 28, 1867. In 1869 he was editor of the *Detroit Review of Medicine*. He has operated for stone, performed external perineal urethrotomy, removed half the upper jaw, and has had a varied experience in general surgery. His specialty is orthopedic surgery and diseases of genito-urinary organs and rectum. He is a member of the American Medical Association, of the Michigan State Medical Society, Detroit Medical and Library Association, and of the Detroit Academy of Medicine, of which he was secretary, 1876. For several years he held the office of Lecturer on Diseases of Genito-Urinary Organs and Rectum in the Detroit Medical College, and previous to that time was Demonstrator of Anatomy in the same institution. For nearly three years he was City Physician and member of the Board of Health in Detroit, Michigan; for two years was Surgeon of the Michigan Central railroad, was formerly Surgeon to St. Luke's Hospital, Detroit, Michigan, and was Daily Physician to Detroit Medical College Dispensary, and to St. Mary's Hospital Infirmary, Detroit, Michigan, for a period of two or three years. He is now Professor of Orthopedic Surgery, Genito-Urinary Diseases and Clinical Surgery in the Detroit College of Medicine, and secretary of the Faculty. He is also Surgeon to the Wabash Railway Company, and to Harper and St. Mary's Hospital, and Medical Examiner and Adviser for several of the leading life insurance companies of this country. His contributions to medical literature consist of a number of articles on various surgical subjects, but relating principally to his specialty. He was married November 13, 1872, to Miss Gertrude Esselstyn, of Detroit, Michigan.

**WALL, Otto A.**, of St. Louis, Missouri, was graduated M. D. at the Missouri Medical College, St. Louis, in 1870, and entered the Bellevue Hospital Medical College, New York, from which institution he received an *ad eundem* degree in 1871. He is now Professor of Materia Medica and Botany in the St. Louis College of Pharmacy, and Lecturer on Artistic Anatomy in Washington University. Dr. Wall is a member of the St. Louis Medical Society and the St. Louis Medico-Chirurgical Society.

**WALLACE, David R.**, of Waco, Texas, was educated at Wake Forest College, North Carolina, and then entered the University of the City of New York, from which institution he was graduated in medicine in 1854. During the Civil War he held the position of Surgeon in the Confederate States Army, since which time he has devoted special attention to psychiatry and neurology. He is ex-president of the Texas State Medical Association; member of the American Medical Association, American Association of Superintendents for the Insane, and the Medico-Legal Society of New York. Dr. Wallace was for many years Superintendent of the North Texas Hospital for Insane, located at Terrell, in that State, and as an alienist and neurologist he is widely known, and is a physician of recognized skill in the treatment of all disorders relating to his special field of medicine.

**WARD, Milo B.**, of Topeka, Kansas, was educated in medicine at the College of Physicians and Surgeons, Keokuk, Iowa, from which institution he received the degree of M. D. in 1879, since which time he has devoted special attention to obstetrics and diseases of women. He is now Professor of Gynecology in the Kansas Medical College, Topeka, and secretary of the Faculty of that institution. He is also president of the Western Association of Obstetricians and Gynecologists; Fellow of the American Association of Obstetricians and Gynecologists; member of the Topeka Academy of Medicine and Surgery, Kansas State Medical Society, American Medical Association, and secretary of the Section on Obstetrics and Gynecology in the latter national medical organization.

**WARD, Samuel Baldwin**, of Albany, New York, was born in New York City, June 8, 1842. He was educated in private schools and in Columbia College, from which he received the degree of A. B. in 1861, and that of A. M. in 1864. He pursued his medical studies in the College of Physicians and Surgeons, New York City, and the Medical Department of Georgetown College, Washington, District of Columbia, and received the degree of M. D. from the latter institution in 1864, and settled first in his native city, but removed to Albany in 1876. He has contributed an article on the "Sphygmograph and its Uses," to the *New York Medical Record*, one on "Embolism of the Arteries of the Extremities," *New York Medical Journal*, and several translations of medical works and histories of cases to societies with which he is connected. He has held the position of Professor of Anatomy, and subsequently of Surgery, in the Woman's Medical College of the New York Infirmary, Professor of Surgery in the Albany Medical College, and is now Professor of Theory and Practice of Medicine in that institution; also Attending Physician to the Albany Hospital. Dr. Ward is Consulting Physician to St. Peter's Hospital and

House of the Good Shepherd, member of the Albany County Medical Society, Association of American Physicians and American Climatological Association, and is ex-president of the Medical Society of the State of New York. During the War of the Rebellion he served three years in the capacity of assistant surgeon. In October, 1871, he was married to Miss Nina N. Wheeler, of New York City.

**WARE, Lyman**, of Chicago, Illinois, was graduated M. D. at the Chicago Medical College in 1866, and received an *ad eundem* degree from the University of Pennsylvania, Philadelphia, in 1868, since which time he has devoted special attention to the treatment of diseases of the eye and ear. He is now Surgeon to the Illinois Charitable Eye and Ear Infirmary, Ophthalmic and Aural Surgeon to the Chicago Orphan Asylum, and is an active member of the Chicago Medical Society, Illinois State Medical Society, and the American Medical Association.

**WARNER, George M.**, of Louisville, Kentucky, was graduated M. D. at the Louisville Medical College in 1880. He is now Professor of Materia Medica and Therapeutics in that institution, and secretary of the Faculty, also Physician to St. Vincent's Orphan Asylum, and Consulting Physician to Louisville City Hospital. Dr. Warner is an active member of the Kentucky State Medical Society, a frequent contributor to medical literature, and one of the best known and most accomplished physicians of his city.

**WARREN, Edward**, formerly of Baltimore, Maryland, was born in Tyrrell county, North Carolina, January 22, 1828, and died in Paris, France, in the autumn of 1893. His parents were of English descent, and natives of Virginia. His father, Dr. William C. Warren, was a man of intelligence and good professional attainments. When the subject of this sketch was but four years of age his father removed with his family to Edenton, North Carolina. At the proper time the boy was sent to the Fairfax Institution near Alexandria, Virginia, where he remained for two years, and was then placed at the University of Virginia, where he won honors and received diplomas, and by selection delivered the valedictory before the Jefferson Society. In 1851 he graduated from the Jefferson Medical College, in Philadelphia. It is stated by one of his biographers that while pursuing his studies in Philadelphia he conceived the idea of administering morphine under the skin for the relief of pain, by puncture with Anel's syringe. He had written his thesis for graduation on this method of administering medicine; but mentioning it to one of the faculty, who looked upon it as chimerical and dangerous, he was dissuaded from presenting the paper, and wrote one on another subject. He had, however, become so thoroughly convinced of the practicability of the method that he soon after put it to a practical test, and was some four years in advance of the public announcements of this very useful method of administering remedies. To further prosecute his medical studies he spent most of the years 1854 and 1855 in attending the hospitals and clinics of Paris, and during this time formed strong and lasting friendships with many of the leading medical men of France. He was a ready and graceful writer, and contributed from the French capital a number of very ac-

ceptable articles to the *American Journal of Medical Sciences*, and to other medical publications in this country. On returning to the United States he settled to practice at Edenton, North Carolina. He was thoroughly well equipped for engaging in his professional pursuits, and speedily acquired a leading position among the medical men of that region of the State. In 1856 he was selected to deliver the annual address before the North Carolina State Medical Society, which was well received, and brought him prominently before the active workers in the professional ranks. The same year he obtained the "Fisk Fund Prize" for an essay on the "Effects of Pregnancy on the Developing of Tuberculosis." This paper has passed into the permanent literature of medicine. In 1857 he was elected editor of the *North Carolina Medical Journal*, at the time the official organ of the State Medical Society. The Gynecological Society of Boston, the same year elected him a member of that organization. While in France he became a member of the American Medical Society of Paris, and this organization sent him as their delegate to the American Medical Association, but he was unable to attend or register. But he was a delegate from the State Medical Society of North Carolina to the meeting of the American Medical Association at Louisville, Kentucky, in 1859. He also attended meetings from Baltimore, where he was then practicing, in 1860, and every other year from 1866 until 1872. On November 16, 1857, he was united in marriage to Miss Elizabeth C. Johnston, of Edenton, North Carolina, a most estimable lady, whose ancestors were extensively connected with many distinguished families in the Old North State, and in Virginia. Dr. Warren's reputation for learning and scientific acquirements had become so widely known in 1860 that he was elected Professor of *Materia Medica* and Therapeutics in the old and prosperous University of Maryland. This led to his removal to the city of Baltimore. The same year he was elected the first vice-president of the convention for the revision of the United States Pharmacopeia. In the University of Maryland he at once took high rank as an able teacher and an attractive lecturer. On the outbreak of the Civil War he threw his fortunes with his native State and his friends in the South. He served in the field, in hospitals and on medical boards. He was chief surgeon in the North Carolina Navy, and medical director of the Cape Fear section. He was also for a time the chief medical inspector of the Department of Northern Virginia. He was twice promoted for his efficiency and courage on the field of battle. This trait of efficiency in the doctor was so notable as to attract attention, and the fact coming to the attention of the Assembly of North Carolina, an act was passed by them raising his rank from that of colonel to that of brigadier-general for "efficient services rendered to sick and wounded." Notwithstanding the engrossing official and professional duties of Dr. Warren during the war, he wrote a work to meet the needs of surgeons in the field, entitled, *Surgery for Field and Hospital*. In this publication, which was well received and speedily passed through two editions, he made some valuable original suggestions. In 1865 Dr. Warren resumed his residence in Baltimore, expecting at the same time to resume his

professional duties in the University of Maryland. But the changed conditions of the country and the status of the Southern States, the policy of the general government and local interests combined to close the doors of that institution against him. He was not only capable but ambitious and full of energy, and it was mainly at his suggestion and through his efforts that the old Washington University Medical School was revived and rapidly rose to have a commanding position and an able faculty and good patronage. In this faculty Dr. Warren filled most acceptably the chair of surgery. When the act of the Assembly of Maryland was passed requiring an examination and registration of the physicians of the State, Dr. Warren was appointed upon the board to carry the law into effect. In 1868 he was elected one of the vice-presidents of the Medical and Chirurgical Faculty of Maryland, and the same year founded the *Medical Bulletin*, which under his management acquired a large circulation. The celebrated Wharton trial, which took place in 1872, brought Dr. Warren to the forefront among specialists in criminal trials. He was confronted by able physiologists, general practitioners and chemists, and their theories and tests shown to be inconclusive. The case attracted wide attention not only in America but in Europe. Dr. Warren ably sustained himself before the court, and his testimony so completely broke down the chemical evidence relied upon by the prosecution as to compel the court to enter a *nolle prosequi* in the case. For some time after Dr. Warren was made a target for critics, not only in the medical profession, but by the bar and the public press. But it is simple justice to say that no review of his evidence and theory of the case was ever able to demonstrate that he was in error in his views. At the meeting of the American Medical Association in 1872 he was chosen chairman of the Section of Surgery for the following year. He did not, however, attend that meeting or send a report. In 1873 Dr. Warren suffered a severe domestic affliction in the death of his devoted wife. His health suffered seriously, and to change the scene, he consented to accept a medical position in the army of the Khedive of Egypt. His service, although brief in that country, was nevertheless sufficiently conspicuous to place him at the head of the surgical staff. It was his good fortune to relieve Kissim Pasha, the Minister of War, from a strangulated hernia. This operation was undertaken when the War Minister's life was despaired of by his own surgeons, and when it was almost impossible for Dr. Warren to get any of them to assist him in the operation, from a religious dread of being blamed with causing his death. But the operation was a success, and the result placed the courageous Dr. Warren in the front rank of surgeons in the Khedive's army. His splendid success where death was imminent and expected induced the Khedive to confer upon Dr. Warren the decoration of the Medjidiah and the title of Bey. Dr. Warren unfortunately contracted a severe form of ophthalmia common in the East, and it proving obstinate, he obtained a furlough for six months to visit Paris for treatment. Here he was promptly told that one eye was practically lost, and that a longer residence in Egypt would result in the loss of the other. He had no alternative but to resign, which he did. The Khedive was most kind,

and in accepting his resignation spoke of his valuable services in the Egyptian army and wished him long years of usefulness. It was then while still under treatment that he was advised to become a candidate for practice in Paris. After many conferences with friends and the earnest advice of Drs. Charcot, Breid and other eminent practitioners, he concluded to take up his permanent residence in that city. Dr. Warren's success in the metropolis of France was exceptionally rapid and gratifying. For twenty years he had been one of the leading physicians and surgeons and obtained a world-wide reputation for his skill. Both practice and honors came flowing in upon him. From Spain he received the decoration of a "Knight of the Order of Isabella the Catholic," for earnest services rendered to Spanish subjects; and from his old University of Maryland a degree of "Master of Surgery." Dr. Warren, both as a boy and through his life, proved his indomitable energy and power of work. He secured a large share of confidence with his professional brethren. And yet, like all men of force and original ideas, antagonisms were evolved by the friction. That he was a man of ability and culture his life and works attest. His house was frequented by Americans and travelers from other countries, and his attentions and hospitalities were for years generously bestowed upon numerous friends visiting Paris.

**WARREN, Joseph H.**, of Boston, Massachusetts, was born in that city in 1831 and died there March 20, 1891. His father was the seventh son of General Warren, of Revolutionary fame. He was a Medical Director in General Casey's division, and of provisional troops during the last war as well as President Lincoln's medical attendant. He saw active service in the field before Yorktown, Virginia, and soon after was disabled while bearing special dispatches to Washington, and was obliged to resign. He was quite a traveler, for health and pleasure, and more than once served as a delegate from the American Medical Association, of which he was vice-president in 1889 and 1890. He had read papers before the British Medical Association and the French Academy of Medicine. He published in London a "Practical Treatise on Hernia," a second edition of which was issued in 1882 in America. He operated in Guy's Hospital, in London, and elsewhere, to demonstrate his method. He later published "A Plea for the Cure of Rupture," and has written very many monographs and medical papers, as well as general articles.

**WATHEN, William H.**, of Louisville, Kentucky, was educated in medicine at the University of Louisville, from which institution he received the degree of M. D. in 1870. He is now Professor of Abdominal Surgery and Gynecology in the Kentucky School of Medicine, and Dean of the Faculty of that institution. He is also Consulting Gynecologist to the Louisville City Hospital. Dr. Wathen is ex-President of the Section on Obstetrics and Gynecology of the American Medical Association; Fellow of the American Gynecological Society, American Association of Obstetricians and Gynecologists; Southern Surgical and Gynecological Society; member of the Kentucky State Medical Society and Louisville Medical Society. His contributions to medical literature have been numerous and important.

He is widely known as a skillful and successful gynecean surgeon, an able clinical teacher, and a recognized authority upon all subjects relating to his special field of practice.

**WATKINS, William B.**, of Portland, Oregon, was graduated M. D. at the Medical Department of Willamette University, Portland, in 1834. He is now Professor of diseases of the Eye, Ear, Nose and Throat in that institution. He is Physician and Surgeon to Portland Hospital, for all diseases connected with his special line of practice, which is that of oculist, aurist, rhinologist and laryngologist. Dr. Watkins is an active member of the Oregon State Medical Society and the Portland Hospital Clinical Society.

**WATSON, William Perry**, of Jersey City, New Jersey, was educated in medicine at the College of Physicians and Surgeons, New York City, from which institution he received the degree of M. D. in 1878. He is now Attending Physician to St. Francis Hospital and for Diseases of Children, to the Central Dispensary, and Consulting Physician to St. Michael's Orphan Asylum, Jersey City. He is an active member of the New Jersey Academy of Medicine, New York Pathological Society, and other medical associations. Dr. Watson is also a member and secretary of the Board of Medical Examiners, State of New Jersey, and the Examiner in the Practice of Medicine. He is editor of the Archives of Pediatrics, and is a frequent and well-known contributor to medical literature.

**WATERMAN, Luther Dana**, of Indianapolis, Indiana, was born in Wheeling, Virginia, November 21, 1830. His literary education was obtained at Miami University, Oxford, Ohio, and his medical education at the Medical College of Ohio, where he graduated in 1853. He first established himself in practice in Cincinnati, where he remained till 1855, then removed to Kokomo, Indiana. In 1861 he entered the army. During the war he was for three years Surgeon to the Eighth Indiana Cavalry (Thirty-ninth regiment), during which period he was Medical Director of the Second, and subsequently the First Division of the (old) Twentieth Army Corps, Department of the Cumberland; also Surgeon to the Officers' Hospital at Nashville, Tennessee. He also had charge of hospitals at Huntsville, Alabama, Bridgeport, Tennessee, and at Chattanooga, Tennessee. He was captured at Newnan, Georgia, and imprisoned at Macon, and at Charleston, South Carolina. In 1864 he settled in Indianapolis, where he has since remained engaged in an extensive, successful and remunerative practice of general medicine and surgery. He is a member of the American Medical Association, the Indiana State Medical Society and the Marion County Medical Society, State of Indiana. He has been one of the Surgeons of the Indianapolis City Hospital, and was one of the incorporators of the Indiana Medical College, in which institution he filled the chair of Professor of Anatomy from 1869 to 1873, and that of Professor of Principles and Practice of Medicine from 1875 to 1877. He was elected president of the Indiana State Medical Society in 1877. His contributions to professional literature consist of important papers published in medical journals and cases reported to the various medical societies with which he is connected. He has also written a volume of poems and made

other contributions to general and scientific literature. Dr. Waterman, as a physician, has given the study of medicine profound thought. Referring to his views concerning the nature, etiology, symptoms, signs and treatment of disease, the following extracts, derived from his "Medical Notes," are here presented: "There is a fascination in the study of man, even in his accidental decomposition, more or less, by disease. Nature is forever thus offering opportunities for discoveries, by her revelations. The physician needs only more delicate tests, and keener power to observe. Every living human body contains a delicate arrangement, the nervous system, ever ready to signal the state of organs or organism. Here quickly are shown the discords which occur amidst the harmonious functions constituting health. The physician should know the individual pitch of health, and maintain concord between function and structure, between physical and intellectual. Some organizations are mobile, others firm. To read the patient, then his disturbance, is the true order. The individual is a unit, separated into physical and psychical for purposes of study, by artificiality of concept. The true physician treats the man diseased—neither the man nor the disease. His highest function is to read the organism, measure its vigor and vitality, find its weakest and strongest organs, and use the one to serve the other. He often accepts a lower plane of life for his patient; often a long upward incline to health and a new balance of physiological equilibrium. Man carries his history in his face and form, and they reveal his direction toward order or chaos, life or death. The complexity and delicacy of man's nervous system is the measure of his evolution, its disturbance the index of his derangements, and the skill to appreciate and interpret it, one of the highest accomplishments of the physician. Physical health is the perfect performance of all the bodily functions, manifested by the harmony between mind and body, and indicated by serenity of the nervous system. Whatever disturbs this relation is detrimental. Man originates as a cell, the physical body of a force, develops and ends as a unit. As by growth his organs differentiate, they are made one by the co-development of the nervous system. Structure and function are inseparably one in the original cell, as in the matured man. Life and its physical basis are never separated in all the universe. Only the provisional dies, never the real. The integrity of this union of structure and function through all the mechanism necessary to the organism, is tested by its ability to bear strains. Man's trained senses combined, more sensitive than all instruments, should appreciate every disturbance of this body, nature's most delicate mechanism. It is of the first importance, in the treatment of a person diseased, that the case should be thoroughly analyzed until the distinctive features which vary it from all others are detected to such a degree that the physician may direct his remedies to the essential morbid action. Until these features are obtained the diagnosis must be uncertain and the treatment wavering; and the local symptoms developed by the evolution of the disease, or by medication, assume undue prominence, and direct too greatly the treatment. To obtain these clinical observations is required, as well as the recog-

nition of the general causes that modify the types and tendency of disease, to measure the constitutional condition and the individual features of the case, with their cause, degree, duration and tendency. To treat every departure as disease betrays ignorance of the resistance of the organized body, and leads to meddling interference. The skillful physician may be known by the rarity of dangerous cases occurring under his management. It is rarely that any disturbance of an important organ continues long without involving other organs; therefore, every symptom is of value as a witness coming from the seat of morbid war to give evidence of the cause, extent and locality of the contest. Not by startling assumptions can medical science be advanced, or cases more successfully treated, but by patient accumulation and analysis of the phenomena occurring in disease as in health. Bubble theories have burst in every age; facts obtained, recognized and recorded, stand fast forever, and just deductions from their generalization are the true foundations of medical science. All untrue doctrines ultimately conduct to absurdity or helplessness, and that there are diseases without reliable or anticipated relief is proof that there is incorporated into our views error, either in the facts or the conclusions drawn therefrom. Views not profitable in application should not be held too tenaciously. Around us daily is the field to test treatments and study disease; for the silent laws are often as well seen in their extremest limits as in their center of action. We should know the individual, then the individual symptoms of his derangement, and if no error enters our facts or deductions, the results of treatment must be satisfactory and reliable." In evidence of his poetical genius, his biographer selects at random the following lines from his "Phantoms of Life:—"

"I would unclasp a fiber of life's pain  
By giving glimpses to the soul beguiled  
Of that fair land whose boundaries lie far down  
In the wild world that colors all our dreams,  
Far dwelling, fragrant, flowery and bedewed,  
Beyond the ken of day; but whither yet  
The heart will yearn with instinct unappeased,  
As yearns the child for its dead mother's breast,  
And with a faith that's stronger than all sense,  
Than reason clearer, longer-lived than will,  
Despite the frigid clay that wraps this life,  
And all the poisoned passions that betray,  
The soul sends out frail gossamers of hope  
To catch the radiance of that unknown clime  
And thrill with the unheard music of its shores."

Dr. Waterman has made repeated visits to Europe, to Egypt and other foreign countries in the pursuit of knowledge, recreation and pleasure, and having retired from active practice, has in recent years spent considerable time in Old Mexico and Central America, where, as a result of his archeological investigations, he believes that he has found the primal home of the human race and the ruins of the most ancient cities on earth.

**WEBBER, Nathaniel W.**, of Detroit, Michigan, was graduated M. D. at the Chicago Medical College in 1866, since which time he has devoted special attention to obstetrics and diseases of women. He is now Professor of Gynecology and Obstetrics in the Detroit College of Medicine; Gynecologist to St. Mary's Hospital; Consulting Surgeon to St. Luke's Hospital; Medical Examiner and Adviser for the Mutual Benefit Life Insurance Company of Newark, New Jersey, and Washington Life Insurance Company, of New York. Dr. Web-

ber is an active member of the Michigan State Medical Society and the Detroit Medical and Library Association.

**WEBER, Gustav C. E.**, of Cleveland, Ohio, was born in Bonn, Prussia, May 26, 1828. His father, M. I. Weber, was Professor of Anatomy in the University of Bonn, Prussia, for more than a half-century from the foundation of that famous institution, and was the author of an "Anatomical Atlas," which has been translated into every printed language, "The Hand-Book of Anatomy of the Human Body," "The Pelvis and Crania of the Different Races," "Atlas of the Bones of Domestic Animals," and many other valuable works and writings; he was decorated by several of the crowned heads of Europe for his distinguished services in the cause of science. Dr. Weber's education was chiefly obtained at Bonn University, but before matriculating, the revolutionary movement of 1848 caused him to emigrate. He came to the United States in 1849 and entered the St. Louis Medical College, St. Louis, Missouri, and received the degree of M. D. from that institution in 1851. He then returned to Europe and supplemented his medical education and training by attending the schools and hospitals of Vienna, Amsterdam and Paris. In 1853 he came again to this country and settled in New York, where his brother Edward was engaged in the practice of medicine. His brother died that year, and he assumed his practice with success. The demands upon him were so great that his health failed, and in 1856 he was obliged to relinquish professional work. That year he accepted the chair of Surgery in the Cleveland Medical College, made vacant by the resignation of Dr. Horace A. Ackley, and retained that position seven years. In 1859 he established the *Cleveland Medical Gazette*, which he conducted with ability for several years. In the autumn of 1861 one of the first acts of Governor Tod was to appoint him Surgeon-General of the Ohio forces, with special mission to organize a system for the better medical care of the troops in the field. After making arrangements for a better condition of the camps and hospitals in the State, he obtained from the Secretary of War permission to visit the Ohio soldiers in the field, and the troops were greatly benefited by his labors. In the autumn of that year his wife's health and the pressure of his professional duties compelled him to resign. Governor Tod in his reply expressed the highest appreciation of his services, and asked him before retiring to attend to the wounded upon the battle-field of Perryville, Kentucky. He obeyed these instructions, returned to Columbus, closed his official relations with the State, and resumed his duties in the college. In the spring of 1863 he closed his connection with the Cleveland Medical College, and in 1864 organized the Charity Hospital Medical College, of which he was made Professor of Clinical Surgery and also Dean of the Faculty. He was also appointed Consulting Surgeon of Charity Hospital, an institution which owed its existence mainly to his suggestions and efforts. From first to last his services to the hospital were gratuitously rendered. It was finally merged into the medical department of the University of Wooster, he being chosen to fill the same positions occupied during its independent existence. He is now Professor of Clinical Surgery in the Medical Department of

the Western Reserve University, and Dean of the Faculty of that institution. He is the originator of a new method for closing arteries of large size in surgical operations without a ligature. This consists in reflecting the wall of the artery, or folding it back upon itself (like turning back the cuff of a coat), which doubles the thickness of the arterial wall at the end of the divided artery, and enables the artery to close itself by its own contraction. Lest the wall turn back again, a very delicate silver pin, one-eighth of an inch in length, is passed through the walls of the artery at the point of reflection. This method has been frequently tested, has never failed, and promises to eventually revolutionize the existing system of closing arteries with ligatures. It prevents the introduction of foreign substances into the wound, and thereby effectually precludes the possibility of decomposition. He is also the originator of the method of removing stone from the bladder in females, by the division of the urethra as far as the sphincter and then the extraction through the dilated sphincter. Dr. Weber is a member of the Cuyahoga County Medical Society, State of Ohio, American Medical Association, and Corresponding member of the German Medical Society of Paris, France.

**WEBSTER, David**, of New York City, was born, July 16, 1842, at Cambridge, Cornwallis, Nova Scotia. He was educated in the district school and a private school at his native place, and at the Normal School of Truro, Nova Scotia. After teaching school six years, he attended Bellevue Hospital Medical College, New York, from which he graduated in the spring of 1868. He began practice in his native town, where he remained one year and a half, and then settled in New York, where he has since resided, engaged in the study and treatment of diseases of the eye and ear, and in which field of medicine he is widely known. He was the first house-surgeon of the Brooklyn Eye and Ear Hospital, in which he served from the fall of 1869 to the spring of 1871; serving in the same capacity at the Manhattan Eye and Ear Hospital, from the spring of 1871 to the spring of 1873. Immediately on leaving the latter institution he became associated with Dr. C. R. Agnew, with whom he remained many years. In 1873 he was appointed Assistant Surgeon to the Manhattan Eye and Ear Hospital, and Clinical Assistant to the chair of Ophthalmology and Otology in the College of Physicians and Surgeons, New York. He is now (1893), Professor of Ophthalmology in the New York Polyclinic, and in the Medical Department of Dartmouth College, Hanover, New Hampshire, Surgeon to Manhattan Eye and Ear Hospital, Ophthalmic Surgeon to the Hospital for Ruptured and Crippled, to the Skin and Cancer Hospital, House of Mercy and Hackensack Hospital. He is also Consulting Surgeon to the Paterson Eye and Ear Infirmary. Dr. Webster is an active member of the New York Academy of Medicine, New York County Medical Society, New York State Medical Society, New York Ophthalmological Society, American Ophthalmological Society, American Otological Society, and other leading medical, scientific, and social organizations of this country. He married, in June, 1876, Miss Genevieve Macfarlane, a native of Maine.

**WEEKS, John E.**, of New York City, was graduated M. D. at the University of Michigan,

Ann Arbor, in 1881, since which time he has devoted special attention to the study and treatment of diseases of the eye and ear. He is now Professor of Clinical Ophthalmology and Otolaryngology in Woman's Medical College of the New York Infirmary, Lecturer on the Diseases of the Eye and Ear in Bellevue Hospital Medical College, Surgeon to the New York Eye and Ear Infirmary, Ophthalmic Surgeon to the Alms House and Work House Hospital, Blackwell's Island, and Consulting Oculist to the Hebrew Sheltering Guardian Society. Dr. Weeks is an active member of the New York Academy of Medicine, and numerous other medical organizations of that metropolis.

**WEISS, Samuel**, of Lebanon, Pennsylvania, was graduated M. D. at Bellevue Hospital Medical College, New York City, in 1871. He is now Attending Physician to Lebanon County Hospital, Gynecologist to the Good Samaritan Hospital, Lebanon, and Medical Examiner and Adviser for the New York Life Insurance Company, and also for the Mutual Reserve Insurance Company, of New York. Dr. Weiss is an active member of the Pennsylvania State Medical Society, and one of the most accomplished members of the Medical profession in his section of the State.

**WELLS, Brooks H.**, of New York City, was educated in medicine at the College of Physicians and Surgeons, New York City, from which institution he received the degree of M. D. in 1884, since which time he has devoted special attention to obstetrics and diseases of women, in which field of practice his skill as an operative surgeon and clinical instructor has become widely recognized. He is now Lecturer on Gynecology in the New York Polyclinic, and is editor of the *American Journal of Obstetrics*. Dr. Wells is a Fellow of the New York Academy of Medicine, New York Obstetrical Society, New York County Medical Society, and at the Pan-American Congress, which convened in 1893, he was secretary of the Section on Gynecology and Abdominal Surgery.

**WELLS, Frank**, of Boston, Massachusetts, was graduated M. D. at Harvard Medical School in 1868, and from the University of Vienna in 1869. He is Medical Director of John Hancock Life Insurance Company; president of the American Association of Life Insurance Medical Directors; Fellow of the Massachusetts Medical Society, Boston Society for Medical Improvement, Boston Society for Medical Observation and the Boston Society of Medical Sciences.

**WELSH, D. Emmett**, of Grand Rapids, Michigan, was graduated M. D. from the Jefferson Medical College, Philadelphia, in 1878, since which time he has devoted special attention to the study and treatment of the diseases of the upper air passages. He is now Physician to St. John's Orphans' Asylum, St. Mark's Hospital and Masonic Home. He is also president of the Grand Rapids Academy of Medicine, ex-vice-president of the Michigan State Medical Society, member of the American Medical Association, American Rhinological Association, Mississippi Valley Medical Association, and other important medical organizations of this country.

**WENDE, Ernest**, of Buffalo, New York, was educated in medicine at the University of Buffalo, from which he received the degree of M. D. in 1878. He subsequently attended the

University of Pennsylvania, Philadelphia, from which institution he received an *ad eundem* degree in 1884. He is now Professor of Dermatology in the University of Buffalo, and also Professor of Botany and Microscopy in the Department of Pharmacy in the latter university. Dr. Wendt is Health Commissioner of the city of Buffalo, and Dermatologist to the Fitch Provident Dispensary. He is an active member of the Erie County Medical Society, Buffalo Medical and Surgical Association, Buffalo Pathological and Clinical Societies, and the Buffalo Medical Club.

**WENDT, Edmund Charles**, of New York City, was born in Milwaukee, Wisconsin. When quite young his parents took him to New York, and that city has been his home ever since. After a common school and college education he went abroad for the purpose of medical study, and matriculated at the University of Zurich. On completion of a course of study at leading universities, lasting nearly five years, he graduated at the University of Strasbourg in 1877. Three years later (1880) he secured his second medical diploma from the College of Physicians and Surgeons, Columbia College, New York. After several years' hospital experience he began active professional work in New York City, and quickly succeeded in building up a lucrative practice. In 1879 Dr. Wendt succeeded Prof. E. C. Spitzka as Professor of Comparative Anatomy at the Columbia School of Comparative Medicine. Dr. Wendt has also been Associate Professor of Clinical Medicine at various medical institutions in New York. He was Curator and Pathologist of St. Francis Hospital, New York, from 1879 until 1891; Curator and Pathologist of St. Luke's Hospital, New York, during 1882; Curator and Pathologist of the New York Infant Asylum from 1884 until 1888, and late Attending Physician to St. Joseph's Asylum. He is at present Attending Physician to the New York Infant Asylum; Fellow of the New York Academy of Medicine; member of the New York County Medical Society; member of the New York Pathological Society; late member of the New York Neurological Society; member and late president of the Manhattan Medical and Surgical Society, and a member of the German Medical Society of New York. He is also, since 1879, a member of the editorial staff of the *New York Medical Record*, and in 1891 was commissioned to visit the Riviera and the health resorts of the south of France, in order to study and report on the health conditions and the sanitary (or unsanitary) arrangements, municipal and domestic, of the towns and hotels at such places as Cannes, Nice, Pau, Hyères, Mentone, Monaco, San Remo, Alassio, Bordighera, Florence, and Naples. Dr. Wendt is also late editor of the *New York Dietetic Gazette*; contributor of numerous original articles published in the *American Journal of Medical Sciences*, *New York Medical Record*, *New York Medical Journal*, *Boston Medical Journal*, *Philadelphia Medical News*, and *American Journal of Diseases of Women and Children*. He is author of *A Treatise on Cholera* (New York, 1885), and "Contributions to Histology," editor and translator of "Gusserow's Uterine Tumors," and author of articles in the *Encyclopedic Handbook of Medical Sciences*.

**WEST, Alston M.**, of Memphis, Tennessee, was graduated M. D. at the medical depart-

ment of the University of Pennsylvania, Philadelphia, in 1876. He is now Professor of Chemistry, Pharmacy, Toxicology and Hygiene in the Memphis Hospital Medical College. Dr. West is a member of the Memphis Medical Society, Tennessee State Medical Society, Mississippi State Medical Society, and of the Tri-State Medical Society of Tennessee, Georgia and Alabama.

**WHITE, Octavius A.**, of New York City, was born in Charleston, South Carolina, February 8, 1826. His father was Hon. John Blake White, of the same city, a successful lawyer, amateur historical painter, and author of plays enacted at Charleston theater, whose great grandfather, Sir John White, of Kent, England, came to this country with William Penn; a son of his, the grandfather of John Blake White, named Blake Leary White, settled in South Carolina and became a planter on the great Pedee river. The preliminary education of Dr. White was received at the Academy of H. M. Burns, LL.D. in Charleston; subsequently he entered Charleston College and the South Carolina Medical College, graduating A. B. from the former in 1846, and M. D. from the latter in 1848. He settled in Charleston, commencing and continuing practice there till 1865, when he removed to New York. He served as Surgeon in the Confederate States Army during the Civil War. He first introduced the practice of superficial incisions within the os uteri for the relief of stenotic dysmenorrhea. In 1876 he was selected and delegated by the profession of New York for the relief of the yellow fever patients at Savannah. He is a member of the New York Academy of Medicine, County Medical Society, Medical Journal Association, and Historical Society. Of his more important contributions to medical literature, may be mentioned the following: "New Method of Operating for Radical Cure of Hernia," 1851; "Transfusion with Successful Result in a Case of Flooding," 1853; "A New and Safe Mode of Relief in Stenotic Dysmenorrhea," 1855; "Bradycrote Treatment of Yellow Fever," 1858; "Report on Yellow Fever Epidemic of Wilmington, North Carolina, 1862;" "Varicocele and its Radical Cure," 1872; "Report on Yellow Fever Epidemic in Savannah in 1876;" "Observations upon the Pulse, Introducing the Hemarumscope, an Instrument of Precision for Examining Venous and Arterial Currents," 1877. The instrument referred to was devised by Dr. White. He has also invented the hysterotome, for practicing safe incision within the neck of the womb; an instrument for the cure of varicocele, and improved the laryngoscope.

**WILD, Edward**, was born in Massachusetts in 1824, and died in Medellin, Columbia, October 25, 1891. General Edward Wild was a graduate of Harvard University and Jefferson Medical College. His was a remarkably eventful career, in which adventure was more prominent than medicine. When the Crimean war broke out he entered the Turkish army as a surgeon. And about four years after his return home our own war between the states occurred, and he took a commission as Captain in the first Massachusetts Volunteers, May, 1861. Twelve months later he was chosen Colonel of the Thirty-Fifth Massachusetts Infantry, and one year later still he was Brigadier-General, in which capacity he served

through the Rebellion. Brookline, Massachusetts, was his home, and his membership in the State Medical Society is registered as from that town. He was latterly much interested in mining, and it was in part these interests that led him to Columbia, South America, where his death took place.

**WILEY, C. Chase**, of Pittsburgh, Pennsylvania, was educated in medicine at the College of Physicians and Surgeons, Baltimore, Maryland, from which institution he received the degree of M. D. in 1875. His specialty is that of alienist and neurologist. He is late Assistant Superintendent of Dixmont Hospital for the Insane, and Surgeon-Major of the Eighteenth Regiment National Guard, State of Pennsylvania. Dr. Wiley is an active member of the Alleghany County Medical Association, Pittsburgh Gynecological Society, National Association for the Protection of the Insane and Preventive of Insanity, and the Medico-Legal Association of New York. He is also Medical Examiner and Adviser for the Vermont Life Insurance Company, Phenix Life Insurance Company, and for numerous beneficiary orders in the city of Pittsburgh.

**WILLETT, E. Miles**, of Memphis, Tennessee, was graduated M. D. at the Memphis Hospital Medical College in 1884. He is now Physician-in-Charge of St. Joseph's Hospital, Memphis, and Assistant Surgeon Second Regiment of the National Guard, State of Tennessee. Dr. Willett is an active member of the Memphis Medical Society, Tennessee State Medical Society, Tri-State Medical Society of Tennessee, Georgia and Alabama, and was a delegate to the Ninth International Medical Congress.

**WILLIAMS, Daniel Hale**, of Chicago, Illinois, was born in Holidaysburgh, Pennsylvania,

*Daniel H. Williams*

nia, January 18, 1858. He is of English descent, and a son of Daniel and Sarah (Price) Williams. He removed with his parents from

Pennsylvania to Wisconsin in 1870. His education was acquired in common schools and Janesville High School, and afterwards by taking a special course in Latin, Biology, Physics, Logic, German and French, at the Wisconsin Classical Academy. He then became a medical student in the office, and under the supervision, of Surgeon-General Henry Palmer, Janesville, Wisconsin, with whom he remained for four years, and was graduated M. D. at the Chicago Medical College in 1883. Soon after completing his medical education he established himself in Chicago, where he has since remained engaged in a successful practice of general medicine. In June, 1889, he was appointed by Governor Fifer a member of the Illinois State Board of Health, and was reappointed to the same position in 1891. Dr. Williams has been Attending Physician to the Protestant Orphan Asylum for nine years. He is also Attending Surgeon to the South Side Dispensary, and Attending Surgeon to Provident Hospital. He is a member of the Chicago Medical Society, Illinois State Medical Society, and of the American Medical Association.

**WILSON, George F.**, of Portland, Oregon, was graduated M. D. at the Medical Department of the University of Virginia in 1879. He subsequently attended the University of the City of New York, from which institution he received an *ad eundem* degree in 1880. He is now Professor of Military and Operative Surgery in the Medical Department of the University of Oregon, Surgeon to the Good Samaritan Hospital, and Medical Examiner and Adviser for the Equitable and Mutual Life Insurance Companies of New York. He is an active member of his City and State Medical Societies.

**WILSON, H. Augustus**, of Philadelphia, Pennsylvania, was graduated M. D. at the Jefferson Medical College, Philadelphia, in 1879. He is now Professor of General and Orthopedic Surgery in the Philadelphia Polyclinic; Professor of Orthopedic Surgery in the Jefferson Medical College and Woman's Medical College; Consulting Orthopedic Surgeon to the Lying-in Charity Hospital and to Kensington Hospital. Dr. Wilson is a Fellow of the American Orthopedic Association, Philadelphia Academy of Surgery and College of Physicians, Philadelphia.

**WILSON, William E.**, of Denver, Colorado, was educated in Medicine at the University of the City of New York, from which institution he received the degree of M. D. in 1853. An *ad eundem* degree was also received from the University of Nashville, Tennessee, in 1855. He is now Professor of Materia-Medica, Therapeutics and Diseases of Children in the Medical Department of the University of Denver, President of the Colorado State Medical Society, Denver Medical Association, Arapahoe County Medical Society, and was formerly President of the State Board of Medical Examiners of Colorado.

**WIMERMARCK, Arvid H.**, of Chicago, Illinois, was graduated M. D. at the Rush Medical College, Chicago, in 1884. He is now Medical Examiner and Adviser for the Home Life Insurance Company, and late Superintendent of Cook County Infirmary. Dr. Wimermark is an active member of the Chicago Medical Society, and Scandinavian Medical Society.

**WINDROW, Sven**, of Chicago, Illinois, was

educated in Medicine at the Carolina Medical and Surgical Institute, Stockholm, from which he obtained his medical degree in 1881. Subsequent to his removal to this country he entered the University of Pennsylvania, Philadelphia, and was also graduated M. D. from that institution in 1887. He was formerly a Surgeon in the Swedish Army, and Superintendent of the Linnean Hospital. He is now director of the Chicago Midwife Institute, Oculist to the Chicago Polyclinic, president of the Scandinavian Medical Society, and an active member of the Chicago Medical Society, and other medical organizations of that metropolis.

**WINSTON, Gustavus Storrs**, of New York City, was born there February 15, 1834. He was educated in a private school and at Columbia College. He entered the Union Army in 1861, and was taken prisoner at the first battle of Bull Run, in July of that year. Afterward he was stationed in Central Park Army Hospital during 1862, 1863 and 1864. He left the army in 1865. He studied medicine at the College of Physicians and Surgeons, New York, and graduated in March, 1863. After the war he established himself in his native city, making a specialty of diseases of women and children. He is a member of the Medical Journal Association, of the New York Academy of Medicine, County Medical Society and State Medical Society, and permanent member of the American Medical Association; also member of the New York Obstetrical Society, of which he has been treasurer for several years. He was formerly Attendant Physician to the Woman's Hospital, to the Demilt Dispensary, to the Department of Out-door Poor, to the New York Hospital Out-patient Department, and is now Visiting Physician to St. Francis Hospital. He is Medical Director of the Mutual Life Insurance Company of New York. His most valuable contributions to medical literature have been given to the public in this connection. He is one of the authors of the "Preliminary Report of the Mortality Experience of the Mutual Life Insurance Company of New York, from 1843 to 1874." This report, in connection with that of the actuary, was published in one volume, quarto, by order of the board of trustees, and reached a second edition in 1877. Also of "Mortuary Experience of the Mutual Life Insurance Company of New York, with Tabulated Reports and an Analysis of the Causes of Death," published by order of the board of trustees in 1877. The facts in these compilations are drawn from a very wide range of medical observations, and are so analyzed and classified as, in the opinion of one of the most distinguished American actuaries, "to add largely to our knowledge of the laws by which hereditary and other diseases affect the duration of human life."

**WINTERMUTE, James S.**, of Tacoma, Washington, was born at St. Paul, Minnesota, April 27, 1860. He is the son of Peter Wintermute, a native of the State of New York, whose ancestors emigrated to America from Germany in 1736. Dr. Wintermute received his early education in Western Ontario, and with his father's family migrated to Yankton, Dakota, in 1870. During 1878 he was exchange cashier in Stimson's Bank, Hamilton, Ontario, and in 1879 commenced the study of medicine at Ann Arbor, Michigan, where he remained during the ensuing year. He subsequently entered Rush Medical College, Chicago, from which

institution he received the degree of M. D. in February, 1883. He then crossed the continent via the Union Pacific Railway, and from San Francisco proceeded north to Portland, Oregon, taking passage on the "Queen of the Pacific," upon one of the earliest trips made by that boat. He reached Tacoma April 19, 1883, and from thenceforth has been counted among the most useful and patriotic citizens, entering into all its interests with a hearty good-will, and with a sincere belief in the greatness of its future. He has not only seen that city emerge from its embryotic condition to its present height of prosperity, but has done all that lay in the power of one man to secure that result. He came of ancestors who bequeathed him those mental and moral qualities which have aided him to the high degree of success he has attained, and given him a wide personal popularity in the city of his chosen home. In 1887 he revisited the East and spent considerable time at the Massachusetts General Hospital, at Boston, reviewing surgery, and the more thoroughly fitting himself for increased professional usefulness in the future. During the last few years he has confined himself largely to the study and practice of surgery, and has won unusual distinction and attained extraordinary success in that important field. Although so well grounded in his profession he is continually a student, learning all the new methods and developments of surgical science. He has always been an earnest supporter of medical ethics in the best meaning of the term. In 1888 he aided in the organization of the Pierce County Medical Society, and was elected First Vice-President of the Medical Society of the State of Washington in 1889. Dr. Wintermute has made himself useful in departments of labor other than that embraced in his profession. He is personally of a genial disposition, generous to a fault, ready to help in any way to advance the cause of humanity in general, and the best interests of his adopted city and state in particular. The success that has crowned his efforts is but the reward of his energy and industry. As a physician, citizen and a man he is widely known as one of the potent forces of the community of which he is a part. Dr. Wintermute was married on June 18, 1888, to Miss Florence K. Jones, of the city of Olympia, State of Washington, a worthy and cultured lady, who removed from Maryland with her family to that city in 1884.

**WINTERS, Joseph E.**, New York City, was educated in medicine at the University of the City of New York, from which he received the degree of M. D. in 1872. He is now Professor of Diseases of Children in that institution, Professor of Diseases of Children in the New York Post-Graduate School and Hospital, Visiting Physician for Diseases of Children to Demilt Dispensary, and Consulting Physician for Diseases of Children to Bellevue Hospital, and University Dispensary, New York. Dr. Winters is an active member of the American Pediatric Association, New York Clinical Society, Alumni Association of Bellevue Hospital, and Fellow of the New York Academy of Medicine.

**WOLFE, Samuel**, of Philadelphia, Pa., was educated in medicine at the University of Pennsylvania, from which institution he received the degree of M. D. in 1873. He is now Professor of Physiology and Diseases of the Nervous System in the Medico-

Chirurgical College, Philadelphia. Dr. Wolfe is an active member of the Philadelphia County Medical Society, Pennsylvania State Medical Society, and the American Medical Association.

**WOOD, Casey Albert**, of Chicago, Illinois, was graduated M. D. at the University of Bishop's College, Faculty of Medicine, Montreal, in 1877, since which time he has devoted special attention to the study and treatment of diseases of the eye and ear. He is now Professor of Ophthalmology in the Post-Graduate

Casey A. Wood

Medical School of Chicago, and Oculist and Aurist to Alexian Brothers' Hospital of that city. He was a member of the College of Physicians and Surgeons, Ontario, in 1877, and the College of Physicians and Surgeons of Quebec, in 1878. He is now an active member of the Chicago Ophthalmological Society, Chicago Medical Society, American Medical Association, and British Medical Association. Dr. Wood is Assistant editor of *Annals of Ophthalmology and Otology*, and as a skillful oculist and aurist, is widely known in his profession.

**WOOD, Thomas Fanning**, of Wilmington, North Carolina, of New England parentage, was born at Nantucket, Massachusetts, February 23, 1841, and died in the former city August 22, 1892. He received a common and high school education, and pursued his medical studies in the Virginia Medical College, Richmond, obtaining an honorary degree from the University of Maryland in 1868. He established himself in practice in Wilmington. He was Physician to the Wilmington Smallpox Hospital during 1865 and 1866, and during the war, from 1863 to 1865, was Assistant Surgeon in the Confederate States Army. He was a member of the New Hanover County

Medical Association, its president in 1875, of the North Carolina State Medical Society, and Board of Medical Examiners, its secretary from 1867 to 1872, and secretary of the State Board of Health. Under his direction was published the interesting little monthly Bulletin of sanitary reports, from the various local boards and committees, throughout the State. He was one of the early members of the American Public Health Association. He was a member of the American Medical Association at various times since 1878. He was connected with the *North Carolina Medical Journal* from its inception in 1878, and for a number of years was its sole editor. He was the author of a paper on the "Non-Identity of Variola and Vaccinia," and of various papers on "Sources of Vaccinia," and "Vaccino-Syphilis," published in the Transactions of the Medical Society of North Carolina. He was a member of the Historical and Scientific Society of Wilmington, and chairman of its botanical section. Although cut down in the prime of his mental vigor, he has left a record of thirty very diligent and useful years in literary and sanitary fields of labor.

**WOOD, T. Hilliard**, of Nashville, Tennessee, was graduated M. D. at the Medical Department of the Vanderbilt University, Nashville, in 1885. He is now Professor of Physiology in the Medical Department of the University of Tennessee, Nashville, and Professor of Diseases of the Eye and Ear in the University of the South, Sewanee, Tennessee. Dr. Wood is an active member of the Nashville Academy of Medicine, and the Tennessee State Medical Society.

**WOOD, William L.**, of Portland, Oregon, was graduated M. D. at the St. Louis Medical College, St. Louis, Missouri, in 1886, since which time he has devoted special attention to diseases of the eye and ear, and is now Professor of Ophthalmology and Otology in the Medical Department of Willamette University. He is an active member of the Portland Medical Society, Portland Hospital Clinical Society, and Oculist and Aurist to Portland Hospital.

**WOODBURN, Frederick C.**, of Indianapolis, Indiana, was born in that city, April 11, 1866. He was educated in the common and High Schools and at Butler University in his native city, and was afterward graduated from the Classical Department of Racine College, Wisconsin, in 1885, when but nineteen years of age. He immediately began the study of medicine under the supervision of his father, Dr. James H. Woodburn, an eminent physician of Indianapolis. He entered the Medical College of Indiana and was graduated M. D. from that institution in 1887, and during the following year supplemented his medical education and training by attending the New York Post-Graduate Medical School and Hospital. From 1888 until 1891 he was Physician to the Indianapolis Orphan Asylum, and from 1889 until 1891, he was Superintendent of the Indianapolis City Dispensary. He is now Consulting Physician for Diseases of the Chest to the City Dispensary and Assistant to the chair of Obstetrics in the Indiana Medical College. He was formerly assistant secretary of the Marion County Medical Society, and is also ex-treasurer of that organization. For two years he has been chairman of the Committee of Arrangements of the Indiana Medical Society,

and in 1892 he held the same position in the Mississippi Valley Medical Association. In 1893 he was elected secretary of the latter organization. In addition to his membership in the medical societies mentioned he is also an active member of the Mitchell District Association of Indiana, and of the American Medical Association. Dr. Woodburn is a young man of much promise in his profession, being one who has had most favorable opportunities for receiving a thorough classical and medical education, and of which he has availed himself to the utmost extent. The honors that have come to him are indeed well deserved, and are but preludes to higher and more distinguished stations that await him. He has filled every position to which he has been called with distinguished ability. He is a studious and investigating physician of recognized skill, and is engaged in an extensive general practice. He is earnest in his convictions and has strong faith in the virtue of medical associations and interchange of views and relation of experiences. He is a gentleman of the most accomplished manners, pleasant and gifted in conversation, sympathetic and generous, traits of character which not only add greatly to his success in the practice of his profession, but, with his habits of earnest investigation, eminently fit him for the position of instructor to others. His acquaintance is a large one, especially with the profession, not only in his city, but extending throughout his State, and he has ardent friends in various parts of the country. His contributions to medical literature are of practical importance, and consist of papers read before the various medical societies with which he is connected. Dr. Woodburn was married, May 29, 1889, to Miss Grace D. Gilbert, the accomplished daughter of Rev. James E. Gilbert, formerly of Buffalo, New York. An infant son, who bears the name of his distinguished grandfather, is the result of this union.

**WOODBURN, James H.**, of Indianapolis, Indiana, was born in Jefferson county, in the same State, January 15, 1822. His youthful days were employed in labor upon his father's farm, and in attendance at the common schools of his native county. Later he took a course at Hanover College. In 1841 he began the study of medicine, and in 1844 the practice of the same. He subsequently attended lectures at the medical department of the Louisville University, graduating M. D. from that institution in 1846. During the succeeding five years he was engaged in the practice of his profession in Shelby, Clark and Johnson counties, Indiana. In 1851 he removed to Indianapolis, where he has since remained. In 1861 he was elected Superintendent of the State Asylum for the Insane, and this position he held in a satisfactory and efficient manner until 1865, when he resigned. Dr. Woodburn is an ex-member of the Indianapolis City Board of Health, and in 1867 was elected a member of his City Council, serving in that capacity continuously for a period of eight years. He has also been identified with the Indiana Medical College, having been elected Vice-President of its Board of Trustees, a position he holds at the present time. He is a member of the American Medical Association, Indiana State Medical Society, and the Marion County Medical Society. He is ex-President

and ex-Treasurer of the last two organizations. Dr. Woodburn is one of the oldest and most highly esteemed physicians in his city and state, having been actively and successfully engaged in the general practice of his profession for a period of fifty years. He was married in 1847 to Miss Ann E. Cravens, of Madison, Indiana. The preceding Dr. F. C. Woodburn is their only living son.

**WOOLSEY, Elliott H.**, of Oakland, California, was graduated M. D. at the Medical Department of the University of Buffalo in 1868. He is now a member of the Board of Health of the city of Oakland, Surgeon to the Southern Pacific Railway Company, Surgeon to Oakland Hospital Hotel for Invalids, Consulting Surgeon to Oakland Receiving Hospital, and Consulting Surgeon to Oakland Free Clinic. Dr. Woolsey is also an active member of the American Medical Association, National Association of Railway Surgeons, Medical Society of the State of California and Society of Physicians and Surgeons of Alameda county, California.

**WOOSTER, David**, of San Francisco, California, was born in Jasper, Steuben county, New York, June 10, 1825. He is son of the Rev. John Wooster, great-grandnephew of Gen. David Wooster, and a descendant of the first Earl of Worcester, England. Previous to graduation in medicine he served as Acting Assistant Surgeon in the United States Army during the Mexican War, being stationed at La Pueblo. In 1849 he was graduated M. D. from the Cleveland Medical College, and in the same year began the practice of medicine at Adrian, Mich. In 1850 he crossed the plains to California; mined, and practiced his profession on the Yuba river until 1856, and in the last-named year established himself in San Francisco, where he has since been engaged in the general pursuit of his profession. In 1858 he founded, and during the ensuing four years edited and published, *The Pacific Medical and Surgical Journal*. Besides his numerous contributions to this periodical and other literary and medical journals, he has published a monograph upon "Diphtheria," 1859, the first publication in the United States treating of this disease, and a work upon "Diseases of the Heart." He has been a member of the California State Medical Society; is a member of the American Medical Association, of the San Francisco Microscopical Society, and a corresponding member of the Royal College of Medicine and Surgery of Turin, Italy. During the years 1861, 1862 and 1863 he served as Surgeon of the California volunteers in Arizona and New Mexico. For four years, from 1867 to 1871, he was United States Appraiser of Drugs at San Francisco, and was from 1871 to 1872 Surgeon to the United States Marine Hospital at the same place. Dr. Wooster is one of the oldest and most accomplished members of the medical profession on the Pacific coast, where he has been favorably and widely known for more than forty years.

**WORTHINGTON, Andrew K.**, of Denver, Colorado, was graduated M. D. at the St. Louis Medical College in 1883. He is now Professor of Anatomy in the Medical Department of the University of Denver, Visiting Physician in Obstetrics to Arapahoe County Hospital, and to Deaconess Home and Hospital. He is also an active member of the Colorado State Medi-

cal Society, Denver Medical Association, and Arapahoe County Medical Society, State of Colorado.

**WRIGHT, George Fay**, of Denver, Colorado, was graduated M. D. at the Miami Medical College, Cincinnati, Ohio, in 1873. His medical education and training were supplemented by attending the New York Polyclinic in 1886, and the New York Post-Graduate Medical School and Hospital in 1892. He is now Lecturer on Orthopedic Surgery in the Gross Medical College, Denver, and is an active member of the Colorado State Medical Society, Kansas State Medical Society, Denver Medical Association, and numerous other medical organizations of this country.

**WYLLIE, W. Gill**, of New York City, was graduated M. D. at the Bellevue Hospital Medical College, New York City in 1871, since which time he has devoted special attention to the study of diseases of women and gynecean surgery. He is now Professor of Gynecology in the New York Polyclinic, Visiting Gynecologist to Bellevue Hospital, and Consulting Gynecologist to Seney Hospital, Brooklyn, New York. Dr. Wyllie is an active member of the American Gynecological Association, and is also a member of the British Gynecological Association. He is widely and favorably known on account of his ability as clinical teacher, and skill as an operative surgeon in his special line of practice.

**WYMAN, Hal C.**, of Detroit, Michigan, was educated in medicine at the University of Michigan, Ann Arbor, from which institution he received the degree of M. D. in 1883. He is Professor of the Principles of Surgery and Operative Surgery, in the Michigan College of Medicine and Surgery, Detroit, Surgeon to Detroit Emergency Hospital, and Surgeon to the Lake Shore and Michigan Southern Railway Company. He is an active member of the American Medical Association, Michigan State Medical Society, Detroit Academy of Medicine, and numerous other leading medical organizations of his city and State.

**YARROW, Henry C.**, of Washington City, District of Columbia, was educated in medicine at the University of Pennsylvania and received the degree of M. D. from that institution March 15, 1861, when he was but twenty years of age, soon after which he was selected by the Surgeon-General of Pennsylvania to assist in the medical examination of the Pennsylvania Reserves. This duty completed, in July he was appointed Assistant Surgeon of the Cameron Dragoons (Fifth Pennsylvania Cavalry) and was mustered in July 18, 1861. He served with his regiment in Virginia until January, 1862, during most of the time being its only medical officer, and resigned to accept, at the solicitation of Surgeon John Neill, United States Volunteers, in charge of the military hospitals in Philadelphia, the position of Acting Assistant Surgeon United States Army, and Executive Officer of the Broad and Cherry Streets Hospital, which he assisted in organizing. While on duty in this hospital he volunteered to go south, at a time when it was thought Fort Sumter would fall, and the services of additional surgeons be needed. Returning from this duty, he remained at the Broad and Cherry Streets Hospital until the close of the war, for a brief period being the surgeon in charge, and then retired to private life, but in 1866 he was again appointed an

Acting Assistant Surgeon and ordered to Atlanta, Georgia, at which post he served through a severe epidemic of cholera, which disease was prevented from spreading to the citizens of Atlanta by the strict quarantine maintained. While here he volunteered to proceed to Tybee Island, Georgia, to attend the troops sick with cholera at that point. Having suffered with the cholera himself, and his health having become impaired, he was ordered to New York City, the duty assigned him being the examination of recruits and accompanying them to their regiments in the South. In the intervals of the journeys, he was permitted to reside at Fort Wood, New York harbor, where he acted as Assistant to the Post Surgeon, and cholera having become epidemic at the post, he voluntarily remained, and for this service was officially thanked by the post surgeon in his report, and received the verbal thanks of Surgeon-General Barnes. After this he served at Fort McHenry, Baltimore, Maryland; Fort Macon, North Carolina, and Charlotte, North Carolina, being relieved from the latter post to be assigned, at the recommendation of Prof. S. B. Baird of the Smithsonian Institution, in 1872, as surgeon and naturalist to the expedition for explorations west of the 100th meridian under Lieutenant G. M. Wheeler, Corps of Engineers United States Army. He remained on this duty until the centennial year, and was then detailed as assistant to Surgeon J. J. Woodward, United States Army, in charge of the Model Military Hospital at Philadelphia, which establishment he organized, and in which he remained on duty until the close of the centennial exhibition. Upon the completion of this duty he was ordered to the surgeon-general's office, and detailed in the section of comparative anatomy in the Army Medical Museum, and in addition to this duty he was ordered to report to Surgeon D. S. Huntington, United States Army, in charge of the Barnes Hospital Soldiers' Home whenever his services were needed. In 1879 he was ordered to report to Surgeon J. S. Billings, United States Army, in charge of the library of the surgeon-general's office, his duty consisting in preparing manuscript for, and reading the proof of the index catalogue of that library. He continued on this duty until 1888, a period of nearly nine years, when he was obliged to ask for sick leave, partial paralysis of the ciliary muscles of the eyes having supervened as a result of the long continued strain due to the proof-reading. It should be stated that in May, 1888, he was temporarily relieved from duty in the library and ordered to assist the Attending Surgeon United States Army, in the medical care of the late General Sheridan, with whom he constantly remained until within a few days of his decease. Finding he was incapacitated for further work in the library, in October, 1888, the surgeon-general assigned him to duty as Assistant to the Attending Surgeon United States Army, in whose office he still remains. In October, 1889, at the request of Secretary Blaine, he was detailed to accompany the Pan-American delegates on their journey through the United States, and he remained as the medical officer of the congress until its adjournment. For this he was officially thanked by Mr. Blaine. During the many years of his service he has embraced every opportunity offered for scientific work and research, and has prepared and

published a number of papers on anthropology and natural history. He acted as assistant in the United States Fish Commission for some years, and had charge of one of the departments of the United States National Museum, the additional labor having been performed without interference with his strictly military duty. He has been able to contribute largely to the Army Medical Museum, and during two summer vacations he led expeditions through the West to obtain needed specimens; and he has also contributed from his own library a number of works which were not possessed by the surgeon-general's office.

**YEMANS, Charles C.**, of Detroit, Michigan, was graduated M. D. at the Detroit Medical College in 1872. He is now United States Examining Surgeon for the Pension Bureau, and Medical Examiner and Adviser for several of the leading life insurance companies of the United States. Of recent years he has devoted special attention to the treatment of diseases of the skin. He is ex-president of the Wayne County Medical Society, and Detroit Academy of Medicine, and is also an active member of the Detroit Medical and Library Association, Michigan State Medical Society, and numerous other medical organizations.

**YOAKUM, Finis Ewing**, of Denver, Colorado, was graduated M. D. at the Texas Medical College and Hospital, Galveston, in 1874. His medical education and training were supplemented by attendance at the Hospital College of Medicine (Medical Department of Central University), Louisville, Kentucky, from which institution he received an *ad eundem* degree in 1885. He also attended the Chicago College of Ophthalmology and Otology in 1887. He is now Professor of Materia Medica and Therapeutics in the Gross Medical College, Denver. He is a member of the American Medical Association, Texas, State Medical Society, Shreveport (Louisiana) Medical Society, and other important medical organizations.

**YOUNG, J. Gilbert**, of Philadelphia, Pa., was born June 21, 1840, at Chestnut Hill, in that city. He was educated at the Central High School, Philadelphia, from which he graduated in 1859, at the head of a class of thirty-eight. He received the degree of A. M. in 1864. He early began the study of medicine, which was pursued at the University of Pennsylvania, from which institution he was graduated in 1862. He began practice at Camden, N. J., and was for a short period at Gloucester City and Haddonfield, but in 1866 he established himself in his native city, where he has since remained, engaged in a successful practice of general medicine. In 1872 he was married to Miss Florence Albertson, of Philadelphia. Dr. Young is ex-president of Camden County Medical Society, and has been an active member of the New Jersey State Medical Society, and of other medical organizations. He has published valuable papers relating to the hygiene of school-rooms, and upon other subjects of sanitary interest. He has been one of the physicians to the Pennsylvania Widows' Asylum for many years.

**YOUNG, Stephen J.**, of Terre Haute, Ind., was born in Cincinnati, O., March 31, 1829, and is of Scotch-Irish ancestry. His academical education was received at Paris, Ill. He began the study of medicine in early life, entered the Ohio Medical College, and received the degree of M. D. from that institution in

1851. He then established himself in the general practice of medicine and surgery at Terre Haute, where he remained until the commencement of the War of the Rebellion. He entered the United States military service as Acting Assistant Surgeon, but was soon after commissioned Assistant Surgeon and attached to the Forty-eighth Illinois Infantry; was captured and retained as a prisoner three months at Mobile and Tuscaloosa. On being exchanged, he was commissioned as full Surgeon of the Seventy-ninth Illinois Infantry. He was again captured, at Chickamauga, and held at Atlanta and Libby Prison until exchanged at City Point three months after. His service was almost entirely in the field, during which he held the position of Chief Surgeon of Brigade and Division, mainly with the Army of the Cumberland. In 1864 he married Elizabeth M. Cooper, of New Harmony, Ind. In 1865 he located in Paris, Ill., and after remaining there four years, returned to the city of his present residence, where he has since remained, engaged in the active and successful practice of his profession. He was Coroner of Edgar county, Illinois, from 1866 to 1868, and was United States Examining Surgeon for the Pension Bureau at Terre Haute from 1870 to 1872, and has served as president of the Board of Health of that city for many years. He is ex-secretary of the Esculapian Society of the Wabash Valley; ex-president of the Vigo County Medical Society, and member of the Indiana State Medical Society.

**YOUNG, Theodore J.**, of Titusville, Pa., was born at Neustadt an der Hardt, in Palatina, Germany, December 9, 1834. He was educated at Progymnasium in his native country. After studying medicine he attended the Ohio Medical College, and afterward the Medical Department of the University of Pennsylvania, graduating from the latter institution in 1868. He then established himself in Titusville. During the progress of the Civil War he was appointed, June 30, 1863, Assistant Surgeon of the One Hundred and Twenty-fourth Pennsylvania Infantry, and on being mustered out with the regiment in the following May, was re-appointed to the same position with the Seventh Pennsylvania Cavalry, and remained on duty with this regiment until the close of the war, when he returned to the city of his present residence, and has since been engaged in the active duties of the general practice of medicine and surgery, in which field he has had excellent success. Dr. Young is ex-secretary and ex-president of the Crawford County Medical Society in his native State, and an active member of the Pennsylvania State Medical Society, and of the American Medical Association, with which he has been connected for many years. Dr. Young has taken much interest in educational affairs, and served several years as School Director at Titusville, and since 1875 has held the position of Surgery of three railroads centering in that city. In 1875 he reported to the *American Journal of Medical Science* a case of "Amputation of Clavicle and Scapula," and his other valuable contributions to medical science will be found in the Transactions of his State Medical Society.

**YOUNT, Silas T.**, of Chicago, Illinois, was graduated M. D., at the Bellevue Hospital Medical College, New York City, in 1876, since which time he has devoted special attention

to neurology and the surgical treatment of rectal diseases. He is now Professor of Nervous Diseases in the Post-Graduate Medical School, Chicago. Dr. Yount is late vice-president of the Indiana State Medical Society, and

*Silas T. Yount.*

member of the American Medical Association. He is the author of a work on the "Treatment of Hemorrhoids," and has made other important contributions to medical literature.

**ZIEGLER, George Jacob**, of Philadelphia, Pennsylvania, was born March 6, 1821, at Berlin, New Jersey. He is the son of George E. and Elizabeth Zeigler, who removed to Philadelphia when he was young. He was educated at the public schools of that city, and under private tuition, supplemented by self-culture, reading medicine subsequently with Dr. George W. Patterson, and graduating in the Medical Department of the University of Pennsylvania in 1850, his thesis on the occasion being recommended for publication. He settled in Philadelphia. He had devoted his attention to practice of medicine, more particularly including diseases of women and children, and especially to nervous, pulmonary, and chronic diseases in general. He is a member of the Philadelphia County Medical Society, the American Medical Association, and the Philadelphia Academy of Natural Sciences. His contributions to medical literature include publications on "Zooodynamia;" "Researches on Nitrous Oxide," and "Human Rights, as Exemplified in the Natural Laws of Marriage, Legitimacy, and Life in General;" with articles on "Tuberculosis," "Reproduction and Reparation of Bone," and many other subjects. He was for years an editor of the *Dental Cosmos*, and later was the editor and publisher of the *Medical Cosmos*. He was Accoucheur and afterward Physician to the Philadelphia Hospital, but was compelled to resign on account of ill health, the state of his health, indeed, having long been such as greatly to restrict his professional and literary efforts.

## SUPPLEMENT.

KLINGENSMITH, Israel Putnam, of Blairsville, Pa., son of Isaac and Christina (Wegley) Klingensmith, grandson of Abraham Klingensmith, was born April 18, 1850, near Jeannette, Pa. He was educated in the public schools and academies of Westmoreland county, Pa., and at Capital University, Columbus, Ohio. He began to read medicine in 1872 under the guidance of Dr. J. W. B. Kamerer, of Greensburg, Pa., and was later under the preceptorship of the celebrated surgeon, Prof. Samuel W. Gross, of Philadelphia. He matriculated at Jefferson Medical College, and after two courses of lectures received a diploma March

*I. P. Klingensmith*

11, 1875. In the following April he temporarily assumed charge of the practice of Dr. J. S. Miller, of New Derry, Pa., where he continued for two months, and in July located at Derry Station, Pa., remaining until October 1, 1883, then removed to Blairsville. Dr. Klingensmith has been surgeon for the Pennsylvania Railroad since 1876. While residing at Derry Station he was a member of the Westmoreland County Medical Society, and its president for the year 1879-80, and re-elected to succeed himself for the year 1880-81; a member, and in 1888-89 was president, of the Indiana County Medical So-

ciety, and its secretary since May, 1896; a member of the Medical Society of the State of Pennsylvania, and was its delegate to the West Virginia State Medical Society in 1878; of the American Medical Association; of the British Medical Association; of the Pittsburg Obstetrical Society; corresponding member of the New York Academy of Anthropology; a Fellow of the Medico-Legal Society of New York; an Honorary Foundation Fellow of the Society of Science, Letters and Art, of London, England; a member and one of the founders of the National Association of Railway Surgeons; a censor of the Medico-Chirurgical College of Philadelphia. Dr. Klingensmith has published largely in connection with his membership in these societies, as follows: "Treatment of Typhoid Fever," *Medical Record*, August 25, 1883; "Calomel in Diphtheria," *ibid.*, July 12, 1884; "A New Aseptic Pocket Surgical Case," *ibid.*, June 28, 1890; "Incontinence of Urine," *Archives of Paediatrics*, September, 1884; "Hay Asthma," read in section of laryngology, Ninth International Medical Congress, held at Washington, D. C., September 5-9, 1887, *Transactions*, Vol. IV, page 11; "Chronic Hypertrophic Rhinitis," *Medical Brief*, March, 1891; "Antiseptic Surgery in Railway Practice," read at the fourth annual meeting of the National Association of Railway Surgeons, held at Buffalo, N. Y., May 18, 1891; "Official Transactions," 1891; "The Proposed Pennsylvania Railroad Surgical Society," read at a meeting of Pennsylvania railroad surgeons, held at Cresson, Pa., September 3, 1891, *Surgical Department Railway Age*, September 25, 1891; "The Care of the Injured by the Pennsylvania Railroad," read at the fifth annual meeting of the National Association of Railway Surgeons, held at Old Point Comfort, Va., May, 1892, *ibid.*, July 1, 1892; "Strangulated Hernia: The Importance of Its Early Recognition and Advantages of Prompt Operative Interference," *Medical Brief*, July, 1894; "The Curative Value of the Antitoxin Treatment of Diphtheria," *Medical Record*, August 10, 1895. Dr. Klingensmith, from September to November, 1892, took a post-graduate course at the New York Polyclinic, devoting his attention more especially to surgery and gynecology, and also a course on ophthalmic surgery at the same institution during the month of November, 1893; a course on gynecology by Prof. Henry J. Garrigues at the New York School of Clinical Medicine, August and September, 1896; also a six-weeks' course on surgery and gynecology at the New York Post-Graduate Medical School, August 14 to September 28, 1896. Dr. Klingensmith was elected a member of the Town Council of Blairsville, Pa., to fill out an unexpired term of two years in February, 1895, and re-elected for a full term of three years in February, 1897, and has been its president since March, 1896. He is a member and vestryman of St. Peter's Episcopal Church, Blairsville, Pa., and his political connection is with the Republican party. Dr. Klingensmith is a member of the Masonic fraternity, being a member of Westmoreland Lodge, No. 518, F. A. M.; Urania H. R. A.,

Chapter No. 192; Olivet Council Royal and Select Masters, No. 13, and Kedron Commandery, No. 18, Knights Templar, all stationed at Greensburg, Pa. In addition he has attained the thirty-second degree of the Ancient and Accepted Scottish Rite, and is a Noble of Syria Temple, Ancient Arabic Order Nobles of the Mystic Shrine, both of Pittsburg; a member of Philadelphia Conclave, No. 8, Knights of the Red Cross of Rome and Constantine, and becoming a member of the Royal Masonic Rite, he was made Deputy Grand Representative for Pennsylvania. About the same time he was complimented with honorary membership (33°, 90°, 95°) in the Sovereign Sanctuary of Canada. In 1888 he was elected Very Illustrious Junior Grand Master of Ceremonies, Royal Masonic Rite U. S. A., embracing orders and degrees, as follows: The Ancient and Honorable Order of Royal Ark Mariners; the Royal Oriental Order of Sikha and Sat B'Hai; the Ancient and Primitive, Oriental and Egyptian Reformed Rites, 4° to 33°; Rite of Mizraim, 4° to 90°; the Supreme Rite of Memphis and the Egyptian Masonic Rite of Memphis, 4° to 96°. Dr. Klingensmith married September 13, 1883, Miss Mary Caroline, daughter of H. J. Brunot, of Greensburg, Pa., and niece of Hon. Felix R. Brunot, of Pittsburg, Pa., she being a descendant of the old and highly honorable Brunot family of France, and whose grandfather, Dr. Felix Brunot, was a foster-brother of Gen. Lafayette. Their five children are: Hilary Brunot, Mary Christina, William Isaacs, Indiana Traner and Felix Reville Brunot.

ASHMEAD, Albert Sidney, Jr., of New York, second son of Albert Sidney Ashmead, a retired whale oil merchant of Philadelphia, seventh son of Thomas Ashmead and Catherine Lehman, the latter a descendant of Christian Lehman, founder of Germantown, Philadelphia, and sister of Ann Lehman, who married John Ashmead, Thomas Ashmead's brother. The American ancestor of the Ashmead's came to Philadelphia in 1681, from Cheltenham, England. To Cheltenham, England, the family is supposed to have come from Grenada, Spain, where there exists still a large family of Ashmeads, of Moorish descent. Theodore Lehman, the ancestor of these Lehmans, was William Penn's secretary, Dr. George Lehman, of Revolutionary fame, and William Eckard, an American spy, were ancestors of these Lehman ladies. John Ashmead, the great-great-grandfather of Dr. Ashmead, on the 29th of August, 1734, married Sarah Rush, of Byberry, Pa., daughter of James and Rachel Rush, and great granddaughter of Captain John Rush, who fought under Oliver Cromwell, who came to Philadelphia in 1683, and settled at Byberry. John Ashmead and Sarah, his wife, had four children; William Ashmead, born April 24, 1736; John Ashmead, the ancestor of S. Ashmead, born September 29, 1738, died June 6, 1818; Rachel Ashmead, born May 31, 1741; and Benjamin Ashmead, born October 27, 1744. This last was named for the same, as Dr. Benjamin Rush, who signed the Declaration of Independence. Elizabeth Graham, Dr. Ashmead's mother, was a daughter of Thomas Graham (of Scotch descent), of Chester county parentage, and Sarah Lasher. The latter's mother came from Amsterdam, Holland, and is supposed to have been of Jewish descent. She died at 94 years. Solomon Krepps, a noted and wealthy Jew of Lancaster county, Penn-

sylvania, who lived to be 107 years old, was her uncle. Dr. Ashmead graduated at the University of Pennsylvania in 1869, went to Japan in 1873, served as a director of the Tokio Hospital, where he treated 40,000 cases. He had in his charge most of the Japanese troops from the Formosa expedition of 1874, who were ill with pernicious malarial fever. He was the private medical adviser of Prince Adzuma, the Emperor's brother, whom he had treated in Washington before going to Japan. He was also the physician of the American Legation in Tokio, John A. Bingham, of Ohio, being at the time United States Minister in Japan, and D. W. Stevens, now counselor of the Japanese Legation at Washington, being secretary of legation at Tokio. On his return from Japan, Dr. Ashmead settled in Kansas, and was United States Examining Surgeon for Pensions, and Aid-de-Camp on the Major-General's staff, First Division National Guards. In 1882, Dr. Ashmead removed to New York. He testified in the Miser Paine will case before Surrogate Rollins. Miser Paine had made a will giving all he possessed to his lawyer, and it was afterwards found that he had hidden away \$400,000 in the safe of Charles F. Chickering, the piano manufacturer, seventeen years before. The will was set aside on this expert testimony, and the money given to the relatives. Dr. Ashmead is a first cousin of Rev. Henry Van Dyke, of the Brick Presbyterian Church, Fifth avenue, New York, a second cousin of the late John Wayne Ashmead (a descendant of "Mad Anthony" Wayne, of Revolutionary fame), a noted lawyer at the New York bar. Dr. Ashmead was the originator of the Berlin Leprosy Conference. He has three sons by his present wife, who was Miss Isabella M. Wale (of New York), Graham, John and Robert, and two daughters, Jean and Anne. The name of a minor son by his first wife, Miss Florence M. Fleming, of Philadelphia (now Mrs. Florence M. McKinney, of Chestnut Hill, Philadelphia), from whom Dr. Ashmead obtained a divorce, September 6, 1880, in the Second Judicial District Court of the State of Kansas, has been changed by his mother, without Dr. Ashmead's consent, by an act of the Ohio Legislature, passed March 30, 1892, to *David Fleming, Jr.*

THOMAS, Flavel Shurtleff, of Hanson, Mass., was born at that place September 7, 1852, and is a son of Isaac and Abby (Shurtleff) Thomas. This branch of the Thomas family originated with William Thomas, born in 1573, who came from England in 1637. He was one of the merchant adventurers who aided in founding the New Plymouth Colony. He owned a grant of land comprising 15,000 acres, which included the Daniel Webster farm at Marshfield. A grave stone marks his last resting place in the burial ground on the Webster farm. His son Nathaniel came with him to America. Nathaniel had a son known as Colonel Nathaniel, who acting for himself and others, in 1662 bought from the Indians a large tract of land thereafter called the "Major's Purchase," and received a goodly slice of it in compensation for his services. "Wampatuck Farm," now owned by Dr. Thomas, is a part of this land and has been owned by the family ever since its purchase from the Indians. The fourth generation was represented by Lieutenant Isaac; the fifth, by Captain Edward; after these came Isaac, Josiah and Isaac, the father of Dr. Thomas. William Shurtleff, a native of

England, was the founder of the Shurtleff family. His son Abiel had a son Benjamin, whose son Benjamin, second, was the father of Lot, Benjamin, Charles, Barzallai, Milton, Nathaniel, Samuel, Flavel, Abigail, Ruth and Hannah. Of these, Samuel was a physician, Benjamin was a physician and endowed Shurtleff College at Upper Alton, Ill. Dr. Benjamin had a son, Dr. Nathaniel Bradstreet Shurtleff, who was mayor of Boston and a celebrated author and antiquary. Flavel Shurtleff, the father of Dr. Thomas' mother, was a graduate of Brown University and studied theology in Philadelphia. He preached in Hanson and several other places. Abby Shurtleff, the mother of Dr. Thomas, had several brothers and sisters. Major Flavel, who lives in Boston, received his title in the Civil War. Adoniram was a dental surgeon in Boston. Lucy married

*Flavel Shurtleff Thomas.*

Rev. Andrew Reed. Eliza F. married Deacon John S. Brooks, of Hanover. Annie married Levi T. Hayward, M. D., of Boston. Flavel Shurtleff Thomas, M. D., LL. D., received his education and academic titles from the following institutions: Hanson town schools, Hanover Academy, Phillips Andover Academy, Harvard University, Cornell University, Shurtleff College, Boston University, Boston Museum of Natural History, Institute of Technology, Syracuse University, McGill University. He holds the following degrees: B. S., M. S., Syracuse; M. D., Harvard; D. V. Sc., McGill; M. A., LL. D., Shurtleff. Dr. Thomas became a member of the Massachusetts Medical Society in 1875; and of the Harvard University Medical School Alumni Association in 1891. He has been physician to Gordon Rest Sanitarium, Hanson, since 1891; lecturer on comparative anatomy, College of Physicians and Surgeons, Boston, in 1883; Hanson town physician since 1879;

physician to Maquan Sanitarium for the Treatment of Chronic Diseases (especially diseases of women), opened by him in 1894; examiner for the New York Mutual and the Manhattan Life Insurance Companies. He is a member of Puritan Masonic Lodge at Whitman, Pilgrim Royal Arch Chapter at Abington, and Old Colony Commandery of Knight Templars at Abington. Dr. Thomas devotes his leisure to literary work, which includes a graduating thesis on "Opium," "Lectures on Comparative Anatomy," College of Physicians and Surgeons, Boston; "Birds of Hanson," Ph. D. thesis, containing a description of sixty birds, accompanied by specimens prepared by the author, "Insects Injurious to Vegetation in Hanson," read before the Farmers' Institute of Plymouth County Agricultural Society, accompanied by insects which he had preserved; "The Value of a Knowledge of Comparative Pathology to the Doctor of Medicine," Massachusetts Medical Society; "The Value of a Knowledge of Comparative Anatomy to the Doctor of Medicine," *ibid.*; "M. D., What it Is and What it Should Be," *ibid.*; published in the *New England Medical Monthly*, January, 1884; "Liquid Manures," Plymouth County Agricultural Society Prize Essay; "The Ideal Medical School," *New England Medical Monthly*, December, 1884; "Medical Education," *ibid.*, October, 1885; "The Best Preliminary Education for the Study of Medicine," *ibid.*, May, 1886; "A Few Words to Medical Schools," *ibid.*, May, 1887; "The Lecture System," *Boston Medical and Surgical Journal*, April, 1885; "University Degrees," *School Bulletin* (Syracuse), June, August and September, 1887; "The Physician," *Boston Journal of Health*, November, 1887; "Medicines," *ibid.*, March, 1888; "Veterinary Degrees," *Journal of Comparative Medicine and Surgery*, April and October, 1885; "Life in a Puddle," *Youth's Companion*, July 24, 1879; "Microscopic Pond Life," *ibid.*; "Montreal Letters," Old Colony Memorial, 1878 and 1879; "Syracuse Letter," *ibid.*, July 13, 1889; "Non-Resident Degrees," *National Magazine*, February, 1890; "The Current Value of University Degrees," *ibid.*, April, 1890; "The Medical Missionary," *The Healthy Home*, September, 1890; also several articles in *Wide Awake*. He has also issued pamphlets comprising "Lectures on the Science of Agriculture," 1876; "A Perfect University," 1883; "University Degrees: What They Mean, What They Indicate and How to Use Them," Syracuse, N. Y., 1887. He is the editor of the department of University Degrees and Education, in the Standard Dictionary of the English Language, published by Funk & Wagnalls Co., New York City. His other writings are: "LL. D., Origin, History, Past and Present Use," *The University Magazine*, New York, November, 1893; "A Study of the Present System of University Degrees, with Generalizations and Suggestions," *Education*, Boston, May and June, 1893; "Latin or English Order in University Degrees," *The University Magazine*, New York, August, 1893; "The Best Course of Study Preparatory to the Study of Medicine," *American Journal of Education*, St. Louis, October 16 and November 9, 1893; "B. A. and B. S.," *Education*, Boston, January, 1896. Wm. T. Harris, LL. D., the United States Commissioner of Education, has recently invited Dr. Thomas to prepare "A

Dictionary of University Degrees" for the International Education Series published by D. Appleton & Co. Dr. Harris is editor of the series. The work on Academic and Professional Degrees in "The College Year Book" (published by Stone & Kimball, New York) is by Dr. Thomas. The publishers of the Standard Dictionary submitted proof of the entire work to Dr. Thomas' inspection before sending it to press. The question regarding the rule to be used in printing the academic degrees in the work was left to his decision, which was—that all old titles which centuries of use had crystallized into the Latin form—as Ph. D., M. D., LL. D.—should retain that form; that all modern degrees—as B. S., M. S., together with such as had been written both ways, as B. A., M. A.—should take the English form, LL. D. Dr. Thomas received his LL. D. in 1892 from Shurtleff College at Upper Alton, Ill. This institution was founded by Benjamin Shurtleff, M. D., of Boston, and is the oldest college in the West. In the list of graduates we find the names of Rev. Philip Moxom, D. D., Harvard University preacher; Rev. F. M. Ellis, D. D., Tremont Temple, Boston; Hon. John M. Palmer, LL. D., Major-General U. S. A., U. S. Senator. General O. O. Howard received his LL. D., from Shurtleff. Upon learning that Shurtleff College had conferred the degree of LL. D. upon Flavel S. Thomas, Principal Bancroft sent a kind and commendatory letter. Dr. Bancroft is the principal of the famous Phillips Andover Academy (the Rugby of America) and holds the following degrees: B. A., Ph. D., L. H. D., Williams; LL. D., Yale. Biographical sketches of Dr. Thomas may be found in "Physicians and Surgeons of America" and "Biographical Review of Plymouth County." Portraits of Dr. Thomas may be found in the above works and in "The Standard Dictionary of the English Language," published by Funk & Wagnalls Co., New York. Dr. Thomas married Miss Caroline Moore Smith July 9, 1879. Her father is Captain Joseph Smith, C. E., of Titusville, Pa. He won his military title in the Civil War. His father was Captain Joshua Smith, for many years a sea captain, afterwards twice Representative to Legislature and for ten years County Commissioner. The father of Joshua was Captain Joseph, who was a naval captain during the revolutionary war. With the prize money won he bought a farm and built a large house. This place has been in the family ever since, having been the home of Captain Joseph, Captain Joshua and of Captain Joseph until he went to Titusville in 1869, and is now the home of his daughter Caroline. The Doctor and Mrs. Thomas have two children—Percival Shurtleff, born October 7, 1884, and Saba Drew, born February 27, 1893.

MARKLEY, Cady, of Toledo, Ohio, was born near Battle Creek, Mich., October 26, 1857. In the spring of 1859 his parents moved to California. After a residence there of seven years they removed to Battle Creek, where he received the rudiments of a common school education. At an early age he was thrown on his own resources, and on the 2d of March, 1874, he came to Toledo, where he has resided a greater part of the time. By dint of hard study and the burning of midnight oil he prepared himself to enter upon the work of his chosen profession, finally graduating from the Physio-Medical College at Indianapolis, Ind., in the spring of 1894. Upon his return to Toledo he

entered the active work of a general practitioner. In May, 1894, he was elected first vice-president of the American Association of Physio-Medical Physicians and Surgeons at Buffalo, N. Y., and in May, 1895, at Chicago, he was

*Cady Markley.*

elected president. He is a member of the Ohio State Physio-Medical Association and also of the Ohio State Board of Medical Registration and Examination, having been appointed as the Physio-Medical representative on the Board.

LOWE, George N., of Randall, Kan., son of Rev. William and Charity (Morgan) Lowe, grandson of Nixon Lowe, was born July 7, 1838, near Elizabeth City, N. C. He received his primary education in the public schools, and attended the high school of Dublin, Ind., 1852-'53; matriculated at the Greencastle Academy (Ind.), September 1, 1854, and received the degree of A. M., in 1860. Commenced the study of medicine in 1861, at Knightstown, Ind., under Drs. Whitesel & Riddle, but enlisted in the Federal army, August 26, 1861, as private in the Thirty-sixth Regiment, Indiana Volunteer Infantry. After the Battle of Shiloh, April 6 and 7, 1862, he was detailed to assist the surgeons in surgical operations and wound dressing, and served in that capacity until discharged, on account of great physical prostration caused by over fatigue, August 26, 1863. After the close of the war he took three courses of medical lectures at the St. Louis Medical College and the Bellevue Hospital Medical College, New York City, and was graduated from the latter, degree M. D., in 1868. Soon after graduation he settled in the practice of medicine at Richmond, Ind.; and after remaining there five years, was at Losantville, two years; Hagerstown, six years;

Cambridge City, five years. He then, in 1887, spent three years in medical researches and

*George W. Lowe.*

post-graduate courses, at the Post-Graduate Medical School of Chicago, Ill., and received clinical instruction in the Cook County, Presbyterian and Woman's Hospitals, Chicago, Ill. He has been in practice in Randall, Kan., during the past four years. He is surgeon of the Grand Army of the Republic. Dr. Lowe is a member of the Republican Valley Medical Society, of which he is vice-president; Kansas State Medical Society; Nebraska State Line Medical Society; Mississippi Valley Medical Association; Pan-American Medical Congress, Washington, D. C., September, 1893; City of Mexico, Mexico, November, 1896, and other medical societies. He has written papers on "Penetrating Wounds of the Abdomen," *Medical Standard*, July, 1890; "Lacerated Wounds of the Axilla," *Times and Register*, 1891; "Sarcoma of the Dorso-Scapular Region: Operation: Recovery," *Medical and Surgical Reporter*, 1893; "Spina Bifida," *The Kansas Medical Journal*; "Traumatic Lesions of Cranium and Brain," with report of clinical cases, *St. Louis Medical Review*, January 12, 1895; "Cerebral Tumors and Abscesses; Their Pathology, Symptomatology, Diagnosis and Surgical Treatment," *American Journal of Surgery and Gynecology*, December, 1896, and other important papers. He has made a number of capital surgical operations, abdominal, thoracic, and cranial, as well as amputations of the extremities, with success. He is a member of the Independent Order of Odd Fellows, subordinate and grand lodge. Hormah Encampment and Grand Encampment, Indiana. Married, first, in 1860, Miss Amanda, daughter of James Camplin,

who departed in August, 1873, leaving three children—James W. Lowe, of Richmond, Ind., and two daughters, Alice and Floria, married. He married, second, February 27, 1890, Miss Connie M., daughter of Simon Swartz, of Kansas.

COLE, Edgar, of Holmesville, Ohio, one of the most successful physicians and surgeons of that vicinity, is a native of Bradford county, Pennsylvania. Born August 1, 1842. A son of John and Asenath (Andrews) Cole, the former a native of Pennsylvania, of German and English, the latter a native of Vermont, of Scotch and Irish descent. Dr. Cole was reared on a farm and remained there until he was 29 years of age. At the age of 25 he began the study of medicine, entering the American University of Philadelphia in 1870, from which he graduated in 1873, locating in his native State at West Franklin. In the fall of 1873 he moved to Tennessee, following his profession, although his chief purpose was to regain failing health. In 1874 he located at Holmesville, Ohio. Dr. Cole served in the late war between the North and South. He enlisted at Towanda, Bradford county, Pennsylvania, being the first to sign the enlistment roll in the county. He returned to his home at the expiration of five weeks and re-enlisted for three years. He served five months and was discharged on account of failing health. Dr. Cole is a member of the Masonic Fraternity, the Grand Army of the Republic, the Maccabees, the National Eclectic Medical Association, the American Association of Physicians and Surgeons and the United States Medical Practitioners' Protective Alliance. In politics he affiliates with the Democratic party. He has served four years as coroner of Holmes County, three terms as

*Edgar Cole*

clerk and two terms as treasurer of his township. He is now, and has been health officer,

serving consecutively since the board was established. On all questions that come before the people Dr. Cole studies to be right, and takes his stand whether popular or not. His temper is sensitive and he hardly ever overlooks an injustice. He will adhere to a man or to a cause without distrust or swerving, but if once misused he is slow to renew confidence.

*H. G. Waite*

WAITE, Herschel N., of Johnson, Vt., was born February 13, 1850. He received his literary and scientific education at the Stowe High School by attending during the winter months. The intervening summer months were spent on the farm with his father. In November, 1872, the subject of our sketch commenced the study of medicine with Dr. S. J. Williams, of Louisville, Ky., where he was first licensed to practice medicine. Dr. Waite is a member of the Masonic fraternity, being a Royal Arch Mason, a Knight Templar and a Scottish Rite, thirty-second degree. In 1882 Dr. Waite graduated from the Eclectic Medical College of New York City with high honors. In 1883 he attended a course of instruction in the New York Post-Graduate Medical School and Hospital, and became a member of the Clinical Society of said institution. In 1883 Dr. Waite organized the Harlem Eclectic Dispensary of New York City. Dr. Waite is a permanent member of the Eclectic Medical Society of the State of New York, a permanent member of the National Eclectic Medical Association and in 1887 was elected a member of the Vermont State Eclectic Medical Society. He is also a member of the New York Medico-Legal Society. In 1889 Dr. Waite removed from New York to Johnson, Vt., where he has since resided, devoting his entire time to the practice of his profession. In 1892 he was elected president of the Vermont State Eclectic Medical Society, which position he has held continuously. In 1895 he organized the New England Eclectic

Medical Association, and in October, 1896, at a meeting of the Board of Directors, was chosen president of the New England Association. In October, 1895, Dr. Waite became the vice-president for Vermont of the American Association of Physicians and Surgeons, which position he now holds. In 1896 he became the executive member of the American Medical College of Indianapolis, Ind., for the State of Vermont, and received an addendum degree of Doctor of Medicine from the same school.

ROSS, W. Frank, of St. Louis, Mo., was born January 24, 1866, at Belleflower, Ill. He is the son of Thomas A. and Martha A. Ross. His grandfather, Jesse A. Richards, was a pioneer minister of the Christian Church. His mother was a school teacher. Leaving a step-father's home at 14 he began life for himself at \$8 a month on the farm. He graduated in business college at 16. At 18 he graduated from the Daville (Ind.) Normal College. Five years later he graduated from Butler University, Indianapolis, Ind. He now read the Bible in six languages. At 25 he graduated from the Indiana State University, with the degree of A. M. At this time he was pastor of the Kirkwood Avenue Christian Church, Bloomington, Ind. This church had a membership of 500. Desiring to be a foreign medical missionary, he entered medical college in St. Louis, where he graduated in March, 1895, from the Barnes Medical College. In a class of sixty-four he received first prize in nervous diseases, highest grade in materia medica and therapeutics and was selected as valedictorian of his class. He then went to Europe and studied in the hospitals of London, Berlin and Paris. In September, 1896, he graduated from the National

*W. Frank Ross*

College of Electro-Therapeutics, Indianapolis, Ind. For three years of the ten years he spent

as a student in college Doctor Ross "kept batch." He has received honorable mention for his lectures on Europe, Old Mexico and "From New York to California." He is Fellow of the American Association of Physicians and Surgeons, late chief physician and surgeon of the Bethany Park Sanitarium, special lecturer on hygiene in the American Medical College of Indianapolis, professor of hygiene and sanitary science in the Trall Medical College, Kokomo, Ind.; author of "Medical Hygiene," "Sexual Diseases of Men" and "Medical Secrets." He is now located at 1508 North Grand avenue, St. Louis, Mo.

*Leo J. Weinstein,*

WEINSTEIN, Leo J., of Terre Haute, Ind., was born in Cincinnati, Ohio, January 19, 1848. His father was a Russian and his mother German by birth. Dr. Weinstein was married December 25, 1866, to Eliza B. Hamilton, daughter of Dr. J. B. Hamilton, of Prairietown, Ind. From this union one son and two daughters have been born. The son is now attending medical lectures at the Miami Medical College of Cincinnati. The Doctor received his preliminary education at Cincinnati, Ohio; Covington, Ky., and Dayton, Ohio. His medical preceptors were Drs. Huber, of Pana, Ill., and J. H. Leal, of Bement, Ill. He attended medical lectures at Rush Medical College in 1867-68. Practiced as an undergraduate until he graduated at the Miami Medical College of Cincinnati in the spring of 1874. In 1894 he spent some time in the hospitals of Edinburgh, Scotland, and in London. From 1868 until 1878 he practiced medicine in the country in Piatt county, Illinois, when he removed to Terre Haute, arriving there May 1, 1878, since which time he has continuously practiced his profession, excepting the time he was abroad. The Doctor devotes most of his time, as a specialist,

to diseases of women, and has had good success in abdominal surgery and plastic operations. From 1887 to 1889, inclusive, he served as a member in the City Council, representing the then First Ward. He is ex-president of the Vigo County and the Æsculapean Medical Society of the Wabash Valley, of both of which societies he is an honored member. He is also a member of the Indiana State society. He was secretary of the City Board of Health in 1884, and secretary of Vigo County Board of Health from 1887 to 1891, inclusive. He is a member of the staff of the Terre Haute Sanitarium, and the medical examiner for a number of life insurance companies, among them the following: New England Mutual, Washington Life, Manhattan, the Fidelity of Philadelphia, Massachusetts Mutual, the Life Insurance Company of Virginia, Mutual Reserve Fund Life Association, etc. He is a member of the following orders: Masonic, Odd Fellows, A. O. U. W., K. of H., F. L. of H., R. T. of T., I. O. F., and is widely known in western Indiana.

WHERY, Mary A., of Fort Wayne, Ind., was born in Whitley county, Indiana, August 15, 1850, and was educated in public schools of her native county, at the Jefferson High School of Fort Wayne, and at the Methodist College of the same city. For a few years she engaged in teaching school in Whitley county. She was married to Dr. W. P. Whery, Professor of Diseases of Women, Fort Wayne College of Medicine, and directly afterwards began to study medicine and assisted her husband in office operations. A few years after she entered the Fort Wayne College of Medicine and completed the required courses with honors, and graduated in March, 1888. This college is a co-educational one and requires lady students to take up all

*Mary A. Whery*

the studies and attend the same clinics as the male students. Since graduating she has prac-

ticed medicine and surgery with gratifying success. She has adopted obstetrics and gynecology as her specialty, and has a wide circle of clients from surrounding towns as well as in Fort Wayne. She has performed most of the usual operations connected with her specialty, some of them of peculiar difficulty. She acted as clinical assistant to the Chair of Gynecology in the Fort Wayne College. She is a member of Allen County Medical Society, Indiana State Medical Association, Upper Maumee Valley Medical Association, and has read papers before these, and has been for many years a member of the American Medical Association and was appointed a delegate thereto. She was a member of the Women's Medical Congress at the World's Fair, and was representative of the State of Indiana, at which she read a paper.

*Richard Milton Howe*

HOWE, Richard Milton, of Edinburg, Ind., was born at College Corner, Ohio, July 6, 1865, and spent his early life on a farm at that place. At the age of 15 years he went to Illinois where he found work on a farm. In the fall of 1881 he worked his way to St. Louis, and from there to Bolivar, Mo., where he found employment in a drug store, at which place he remained until 1887, when he entered the Eclectic Medical Institute at Cincinnati, Ohio, where he was graduated in 1889. In the winter of 1889 Dr. Howe went to New York and attended the New York Post-Graduate, in the summer of 1890 he practiced medicine with Dr. E. S. Odor, his preceptor at Bolivar, Mo. In February, 1892, he moved to Edinburg, Ind., where he has enjoyed a large practice and gained a reputation as a surgeon and gynecologist. Dr. Howe attended the New York Post-Graduate in 1895 and again in 1896. Dr. Howe's father, John M. C. Howe, the youngest son of Ebenezer and Sarah Howe, was born at College Corner, October 29, 1818, and died in 1889. Ebenezer

Howe was born in Massachusetts in 1754; he served in the Revolutionary War; he also served in the Massachusetts Legislature. A few years after the close of the Revolutionary War he moved to Ohio, where he married Sarah Sears, at Reading, Ohio. They had eleven children. Ebenezer Howe died at Oxford, Ohio, in 1834. Sarah Sears Howe was born in New York in 1775, and died at College Corner, Ohio, in 1865. Dr. Howe's mother died at the same place ten years later.

EVERTS, Orpheus, now of the Cincinnati Sanitarium, College Hill, Ohio, was born near Liberty, Union county, Indiana, December 18, 1826. He is the son of Dr. Sylvanus Everts, who practiced medicine in the State of Indiana for sixty years, with something more than a local reputation; engaging at times in business enterprises, and serving repeatedly in the Legislature of the State; dying at Valparaiso, Ind., in 1878, at the age of 91. Dr. Sylvanus Everts was the son of Ambrose Everts, Revolutionary soldier, blacksmith and surveyor, who was a pioneer, settling with his family in the forest of Ohio in 1795—having emigrated from Vermont, where he was born, son of Rev. Sylvanus Everts, of the Church of England, whose body was buried at Castleton, Vt., near the close of the last century. Dr. Everts' primary education was limited to whatever was attainable in the common schools of the first half of the present century, but largely supplemented by the careful and extended conversations of his father, who was a "born teacher." Taste for natural science was developed early—Darwin's (Francis) "Zoonomia" and "Botanic Garden" being eagerly devoured before his fourteenth year. He graduated M. D. from the Indiana Medical College, class of 1846. The degree (honorary) of Doctor of Medicine was conferred by the University of Michigan in 1864, and by the Rush Medical College, Chicago, in 1866. He abandoned the practice of medicine in 1854 as unsatisfactory as a pretentious science, and irrational as empiricism. Turning attention to journalism—such as it was "in those days"—as unlike that of the present, as the medicine of 1850 was unlike the medicine of to-day—he edited and published a weekly paper at La Porte, Ind., for several years. Was Presidential elector for the then Ninth District of Indiana in 1856, and became Register of the United States Land Office, at Hudson, Wis., in 1858. On receiving the news that Fort Sumter had been fired upon, April 12, 1861, he offered his services to the National Government, in any capacity, but being informed by the Secretary of War that application must be made to the Governor of a State, he hastened back to Indiana and was appointed Surgeon of the Twentieth Regiment of Indiana Infantry, then in camp at Indianapolis. Mustered into service July 22, 1861, he served in the field in the Third and Second Corps of the Army of the Potomac, after the first year as Surgeon-in-Chief of Brigade, Division, or Acting Medical Director of Corps continuously until mustered out, July 21, 1865, being present at every battle fought by that army excepting Bull Run and Antietam. While editing a paper and acting as Register of a Land Office, in which but little business was transacted at the time, Dr. Everts studied law, and was admitted to the bar on examination, and had begun the practice of law, when the war broke out, absorbing all attention. After war service he was employed by the Medical

Bureau of the United States Sanitary Commission, in collecting material in Washington and elsewhere for its contemplated Medical History of the War, until the spring of 1866, when he resumed the practice of medicine at Michigan City, Ind.; the observations, experience and reflection of four years' field service having convinced him that the function of medicine, as a profession, is essential to the happiness of mankind, and may be usefully and honorably performed by whomsoever may be properly qualified. At the same time he convinced himself, by repeated and ample experimentation in the large field hospitals under his control—testing the relative merits of "regular" medication, homeopathy and "no-medicine"—that the administration of drugs of any particular kind is neither the most important, nor most learned feature of the profession. He found, indeed, that the difference in ratios of

*Orpheus Everts.*

recoveries and deaths attending these various methods was not significant, but he believed then, and still believes, that the confidence of the sick in their medical officers, and a sense of security felt because of their presence and assurances was important, and contributed largely to their comfort if it did not save life in many instances. Thirty years after, Dr. Everts would not wish to be understood as believing the administration of medicine useless in the treatment of disease, or that he has not kept in touch with the advancing files of the profession. November 10, 1868, Dr. Everts took charge of the Indiana Hospital for the Insane (now the Central), by appointment, for a term of four years. He was twice re-elected superintendent, but in the third year of his third term, the Legislature having reorganized the governments of all State institutions in the interest of a political party, with a view to a change of officials and patronage, Dr. Everts tendered his resignation, but was not relieved from duty for three months after, and was then assured by each member of the Board of Trus-

tees personally, of regret that circumstances made it incumbent upon the board to accept his resignation. While Superintendent of the Indiana Hospital for the Insane, Dr. Everts, working in harmony with an intelligent Board of Commissioners, suggested and executed, such renovation, remodeling and enlarging of the buildings now known as the "Department for Men," as nearly doubled the capacity of the hospital, and in every respect improved its condition and appearance. He also drew the bill for the law authorizing and making appropriation for the new building known as the "Department for Women," furnished the architect with the ground plan and general features of that imposing structure and superintended its construction. By invitation of the Board of Trustees he delivered an address constituting part of the ceremony of transferring the building from the contractors to the State. February, 1880, Dr. Everts took charge of the Cincinnati Sanitarium, a private hospital for the insane, located on College Hill, near the City of Cincinnati, and has administered its affairs professionally ever since. This institution, under his superintendency has gradually and continuously grown in reputation, capacity and patronage, and is now, perhaps, the most widely known institution of its kind in the interior of the continent. Dr. Everts is a member of the American Medical Association, the American Medico-Psychological Association, late president of the Ohio State Medical Society, the Mississippi Valley Medical Society and the Cincinnati Academy of Medicine. He has contributed liberally to the literature of the profession by society papers, monographs on special subjects pertaining to the care and treatment of the insane and hospital reports covering a period of twenty-seven years. He is the author also of "Giles & Co.," a novel illustrative of heredity, 1878; and "Facts and Fancies," a metrical melange, 1896. Dr. Everts married in 1847, Mary, daughter of Dr. G. W. Richards, then of St. Charles, Ill. Dr. Charles C. Everts, of Indianapolis, (deceased) was their only son. In stature Dr. Everts is six feet and nearly two inches high; normal weight, 220 pounds.

GIBBS, Locero Jackson, of Chicopee, Mass., son of John and Lucy (Jackson) Gibbs, grandson of Daniel Gibbs, was born at Washington, Knox county, Maine, July 16, 1844. In October, 1861, at the age of seventeen, he enlisted in the Eleventh regiment of Maine volunteers, spending the winter of 1861-62 in Washington, D. C., doing garrison duty preparatory to McClellan's peninsula campaign. Here, May 16, 1862, he was discharged for disability, resulting from an attack of measles, complicated by typhoid pneumonia. On the 24th of August, 1862, he again entered the service, enlisting in the Eighth Maine regiment, and served three years and two months, being discharged at Richmond, Va., October 24, 1865. While in the service he saw active duty with his regiment in the various campaigns of the war, being present at the surrender of Gen. Lee at Appomattox Court House April 9, 1865. Was severely wounded at Cold Harbor June 4, 1864, by a sharpshooter. Was twice promoted for meritorious service. Returning to his native State he was, for a brief time, engaged in teaching and mechanical pursuits. After a preliminary education at Westbrook Seminary he commenced the study of medicine with Dr.

Benj. Williams, surgeon of the regiment in which Dr. Gibbs served. After a course of

*L. J. Gibbs*

study at the University of Michigan and one at the medical department of Dartmouth College he graduated from the latter November, 1874, with the honors of his class. He took a post-graduate course at the College of Physicians in the city of New York in 1876 and at the New York Polyclinic in 1891. He began the practice of medicine with Dr. H. B. Burnham at Epping, N. H., November, 1874, but removed to Chicopee in 1881. Dr. Gibbs is a member of the American Medical Association, Fellow of the Massachusetts and Hampden District Medical Societies and ex-president of the Eastern Hampden Medical Association. He was a member of the Chicopee School Board 1882-85; member of the Board of Select Men 1886-87, and president of the first Board of Health under city charter 1891-93; author of articles on "Local Application of Cocaine in Rectal Tenesmus," "Local Paralyzes of Diphtheria" and many other papers read before medical societies. Married, first, in 1879 Miss Cora B. McClench, of Chicopee, who died in 1883, leaving one child, Joseph Omar, who also died in 1890; married, second, Miss Belle B. Capin, of Chicopee.

YOUNG, Stephen J., of Terre Haute, Ind.; of Scotch-Irish descent, born in Cincinnati, Ohio, March 31, 1829; educated at Edgar County Academy, Paris, Ill.; graduated from the Medical College of Ohio March, 1851; settled in Terre Haute, Ind., where he remained until the breaking out of the Civil War, entering the volunteer service in October, 1861, returning in the spring of 1865. On his return he located in Paris, Ill., where he pursued the

general practice four years, when he returned to his present residence. In 1867 was coroner of Edgar county, Illinois. Is a member of the Vigo County Medical Society, and its president in 1877; also a member of the Æsculapean Society of the Wabash Valley; its secretary from 1865 to 1869, and some years after its president; a member of the Indiana State Medical Society, and permanent member of the American Medical Association. In October, 1861, on entering the United States volunteer service, he became an assistant surgeon under contract service at Bird's Point and Cairo. The following February he appeared before the Illinois "Army Medical Examining Board" and passed as assistant surgeon: was assigned to duty as first assistant surgeon Forty-eighth regiment, Illinois infantry volunteers, and in charge at Fts. Henry, Donaldson and Shiloh. In January, 1893, he was examined and promoted surgeon of the Seventy-ninth Illinois infantry. His service, except at Mound City Hospital in the fall of 1861, was wholly in the field, during which time he served as chief surgeon of brigade and division with Army of the Tennessee and Cumberland: was twice captured in care of wounded—at Shiloh and Chickamauga. For six years Dr. Young served as a member of the Board of Examining Surgeons for Pension, and at different times a member of local boards of health. In May, 1893, he was elected a member of the City Council, which office he continues to hold by re-election. As chairman of the Sanitary Committee of this body he was instrumental in establishing an abattoir crematory, sanitary inspector and largely increasing the powers of the Board of Health. He is chief medical examiner of almost all of the old-line insurance companies, as the Northwestern, Equitable, Mutual Benefit, Mutual Life and its referee, and others. Is a member of

*Stephen J. Young.*

the Loyal Legion, Union Veteran Legion and the Grand Army of the Republic. In April,

1864, Dr. Young married Elizabeth M. Cooper, of New Harmony, Ind.

**OWENS, William,** of Cincinnati, Ohio, the subject of the following sketch, was born in the town of Warren, county of Trumbull, State of Ohio, on the 24th day of April, 1823, and is now seventy-three years of age. His ambition for more than a country common school education tempted him to seek a large city, where his prospects for success in life would probably be better; consequently, in February, 1837, we find him in Cincinnati, engaged in learning the coopering trade. After mastering his trade, we find him working mornings and evenings in the shop, and attending instructions at other times in Woodward College. Many times he would enter the shop at four o'clock in the morning and work until eight, when he would take up his studies. Again, he would often work at night

*Wm Owens*

until nine or ten o'clock, so intent was he on accomplishing his task. He entered Woodward College regularly in April, 1844, where he continued two years. When the Mexican war broke out in 1846 he left the college and enlisted in the First regiment of Ohio volunteers. Soon after entering the service he was appointed hospital steward for the First regiment, which position he retained until the time of enlistment had expired in 1847. He was in two battles around Monterey, Buena Vista Cerotro, Morine, and many skirmishes. When the regiment was mustered out he went into the drug store of a friend as clerk. Here he remained until he graduated in medicine in 1849. He then opened a drug store on his own account. He was, upon a competitive examination, appointed Demonstrator of Anatomy in his alma mater. In 1851 he resigned the Demonstratorship in the Eclectic Medical Institute in Cincinnati and accepted that of Assistant Professor of Anatomy in the Western College

of Homeopathy at Cleveland, Ohio. In the spring of 1852 Dr. Owens returned to Cincinnati and resumed practice again, adopting the methods of Hahneman, in which he had been thoroughly indoctrinated while in Cleveland and in close association with Prof. Sturm Rosa. During the war of the rebellion Dr. Owens recruited a company of cavalry, which was mustered into the Fifth Ohio cavalry volunteers. He accepted the position as an officer of the line after the battle of Shiloh. He was detailed to look after the sick and wounded of his regiment, and was mustered as acting assistant surgeon of volunteers. He organized a hospital and remained in charge of it until after the battle around Atlanta. After the battles of Iuka and Corinth his hospital became the general cavalry field hospital. After the capture of Atlanta his regiment was ordered home to be mustered out, as the term of enlistment had expired. Dr. Owens now re-entered the service, this time as acting assistant surgeon A. S. A., and during the impending battle around Nashville was ordered to the front and became attached to Crittenden General Hospital at Louisville, Ky., and after the battle at Nashville was ordered to No. 16 United States General Hospital at Nashville, where he remained until the close of the war. June, 1865, Dr. Owens was appointed Examining Surgeon for Pensions in Hamilton county, Ohio, which position he held for four years. In 1872, Dr. Owens assisted in organizing Pulte Medical College in Cincinnati, and accepted the Chair of Anatomy therein, which he ably filled for two years, when he was invited to take the Chair of Materia Medica and General Therapeutics, which he continued to occupy until he closed his connection with the college in 1884. Dr. Owens was a thorough and uncompromising advocate of the co-medical education of the sexes. He has for many years had a large clientele, and has by diligence, industry and economy secured a fair competence. He has traveled extensively in Europe, South America, Mexico, the West Indies, and nearly all parts of our country. Dr. Owens was married in 1853 to Sarah E. Wilcox, by whom he had six children, two sons and four daughters. Two children died in infancy, one son, William Owens, Jr., M. D., died May 9, 1891. The others are all married well and comfortably settled in life.

**TAYLOR, William Fernando,** of Cincinnati, Ohio, was born in Shelby county, Ohio, March 26, 1845, a son of Joseph L. and Margaret (Shafer) Taylor, the former a native of Vermont, the latter of Ohio. Our subject was educated at Herron's Seminary, Cincinnati, graduating therefrom in 1859. From that time until the commencement of the Civil War he was engaged in business with his father. In 1861 he became attached to the staff of Dr. Thomas, in the Government Hospital, at Covington, Ky., where he remained for two years and six months, during which time he had taken up the study of medicine under the preceptorship of Dr. Thomas. He was then assigned as orderly on the staff of Colonel Sipes. Toward the close of the war he entered the Forty-first Kentucky Regiment, serving therein until peace was declared. For two years after the close of the war he was variously engaged in steambating on the Ohio. After several years he resumed the study of medicine, and was graduated from the Cincinnati College of

Medicine and Surgery, since which time he has been engaged in the practice of his profession

*William Fernando Taylor.*

in Cincinnati. In 1883, Dr. Taylor was a member of the Faculty of his alma mater, occupying the Chair of Professor of Dermatology and Venereal Diseases. Dr. Taylor is a thirty-second degree Mason, and he, with his estimable wife, resides at the Grand Hotel in the above named city.

CARPENTER, Julia Wiltberger, of Cincinnati, Ohio, is a native of that city, and her family were among its early settlers. Her paternal great grandfather, Abraham Freeman, was an Englishman, the oldest son, and entitled to the whole inheritance. Thinking this unjust, he divided the estate equally with the other children, came to the United States and settled in Cincinnati, owning the tract of land through which Freeman avenue now runs. Her grandfather, Captain Joseph Carpenter, a man of education and enterprise, was in his earliest manhood editor and proprietor of the *Western Spy*, the first newspaper published in Cincinnati. Copies of this paper are preserved in the Young Men's Mercantile Library. Her father, the late Dr. Isaac Bates Carpenter, was a graduate of Jefferson Medical College in Philadelphia. After practicing there several years he married and returned to Cincinnati and engaged in mercantile business. From this he retired about fifteen years before his death, and enjoyed a life of ease and literary pursuits. Her mother, Susan Ellmaker, is the daughter of David Ellmaker, of Philadelphia, one of the eleven men who founded St. Andrews' Episcopal Church, and who, with his wife, Julia Wiltberger, now rests in its church-yard. Dr. Julia Carpenter is one of six children. She chose the profession of medicine, because it was open to women, and not because she preferred it above everything else, for there is no department of study that did not have some charm for her. Her mother tells how she insisted on going to school at four years of age, and has

practically kept it up ever since. Her education was a very thorough one, including the higher mathematics, with mathematical astronomy and the sciences. The Woman's Medical College in Philadelphia is her alma mater in medicine. She was interne one year in the Woman's Hospital, connected with this college, and before going to Europe to study she spent two years in the McMicken University at Cincinnati, studying practical chemistry, French and German. Over two years were then spent in Europe, studying one year in the hospitals in Vienna and one year in the hospitals in Paris. From the various professors with whom she studied in these two cities she has very complimentary certificates. After several months more of travel through Europe she returned to Cincinnati, and began the practice of medicine the middle of November, 1878. Dr. Thad. A. Reamy immediately called and advised her to join the Academy of Medicine. Dr. Carpenter replied that if the academy was so polite and friendly as to elect her to membership she would be very glad to join the society. Dr. Reamy then proposed her name for membership, and she was unanimously elected Monday, December 16, 1878. Two days later, Wednesday, December 18, 1878, in the Cincinnati *Daily Gazette*, there appeared the following editorial: "The Cincinnati Academy of Medicine has shown its good sense and freedom from antiquated prejudices in electing Dr. Julia Carpenter to its membership. She is the first practitioner of her sex to receive this mark of appreciation. It is well deserved. She has adopted her profession, not from necessity, but inclination, relinquishing voluntarily the life of ease with which so many young women are content, and

*Julia W. Carpenter*

preparing herself for her duties by thorough study at home and abroad. The time has

passed, here at least, when industry and ambition can be set down as incompatible with social station or feminine refinement." Dr. Carpenter's entrance paper at the academy was on a subject pertaining to the eye, keratascopy. This was published in the Cincinnati *Lancet and Clinic*, March 1, 1879, and was copied into several other medical journals, including one in St. Petersburg, Russia. She has continued to contribute occasional papers to the various societies of which she is a member, and these appear afterwards in the journals. As a writer her style is concise, clear and forcible. The Doctor has held a number of positions of honor, viz.: vice-president of the Academy of Medicine, Professor of Physiology in the Woman's Medical College connected with the Presbyterian Hospital, of Cincinnati; one of the staff of the Presbyterian Hospital and is one of the associate editors of the *Woman's Medical Journal*. She is a member of the following societies: Cincinnati Academy of Medicine, Cincinnati Obstetrical Society, Ohio State Medical Society and the American Medical Association. In Dr. Carpenter's case there was no period of waiting for a practice. It began at once. Those of her friends who had opposed her studying medicine soon became proud of her success. Dr. Carpenter has not gone beyond minor surgery in that domain. Her special interest is more in the causes of disease, and the trend of her thought and study is especially in the line of prevention of disease and the overcoming of it by the application of the knowledge of the body as it is acquired.

AMICK, Marion L., of Cincinnati, Ohio, was born in Scipio, Jennings county, Indiana, on the 13th of September, 1843. He is of German extraction. His father was Obed Amick, a farmer, whose father, Nicholas Amick, a native of Pennsylvania, moved to North Carolina in an early day: and from whence he moved to Indiana in 1848. His mother descended from the Blacks and Overlys of Revolutionary fame. With a view to a professional career in medicine, and to lay the foundation of a broader culture than the common schools afforded, he entered Hanover College, at Hanover, Ind. Was enrolled in Company E, Ninth Regiment Indiana Legion Volunteers, August 26, 1862, received his discharge papers November 24, 1890. He graduated from Hanover, June, 1867. He immediately began the study of medicine in the Cincinnati College of Medicine and Surgery, passing through the usual course, graduating in 1869. Shortly after graduating he was appointed demonstrator of anatomy, which position he held for two years, when he was appointed Professor of Anatomy in the same school, a position that he filled with credit to himself and the college. As early as 1872 he announced the fact that pulmonary tuberculosis was primarily a disease of the pneumogastric nerve and the grey nuclei of its origin. In 1882 he was placed in the Chair of the Anatomy and Histology of the Brain and Spinal Cord. A new chair created in order that the teaching in the college might keep pace with the rapid strides made in the interpretation of the symptoms of nervous diseases, that their students might be educated up to the present standard of knowledge in this field of medicine and surgery. He was very familiar with the anatomy of the brain and spinal cord. He continued to fill this chair until the spring of 1892. He has devoted considerable attention to pho-

tomicrography, and the numerous fine charts he used in his teachings have done much to create an interest in the study of the minute anatomy and histology of the brain and spinal cord. His persistent efforts since 1870 in teaching by means of blackboard drawings and large charts awakened an interest in that mode of teaching, which, since then, has become universal in the colleges of the country. He has probably the finest collection of photomicrographs of the different bacilli of any private individual in the United States. He possesses also a very large and rich cabinet of lantern projections of statuary, embracing examples of the best sculptures, both ancient and modern; fine arts, educational, historical and travels, to which he devotes considerable time and study. His bearing is plain, and his treatment of others every way courteous. He is the special friend of young physicians, and takes great pleasure

*Marion L. Amick.*

in assisting them in their efforts to gain a start in the practice of their profession. On July 22, 1879, he married Maggie Taylor, daughter of John Taylor, of Abilene, Kan., formerly of Cincinnati. He is connected with the Free Masons and Ancient Order of United Workmen. His eminent success in the practice of medicine is attributable to his untiring industry and devotion to his profession.

MCDOWELL, Wiley Galloway, Jr., of Cincinnati, Ohio, was born in Mississippi on the 9th of October, 1864. Like the great majority who bear this name, he is of Scotch-Irish descent, his ancestors three generations ago having emigrated to this country from the north of Ireland. Dr. McDowell is descended from a family who can boast of having furnished to the world many very prominent physicians. Not least among these was his father and preceptor (lately deceased) W. G. McDowell, Sr. The latter having practiced general medicine in the State of Missouri for ten years, his health failed and he conceived the idea of making rectal dis-

eases a specialty. For twenty-five years he followed this specialty to the exclusion of all else.

*Wiley G. McDowell, Jr.*

During the last twenty years of this time he was located in Ohio, at Dayton and Cincinnati. For the past twelve years he has been associated with the subject of this sketch at Cincinnati, where the latter was graduated, and who is now practicing the above specialty. Dr. McDowell, Sr., claimed to have been the first man in the United States to take up rectal diseases exclusively as a specialty. His success in this important branch of surgery has been phenomenal and his patients are scattered throughout every State and Territory in the Union. Dr. McDowell, Jr., is, and has been for the past ten years, located at 127 West Ninth street, Cincinnati, Ohio.

HERRON, Thomas G., of Cincinnati, Ohio, graduated from the Ohio Medical College, March 1, 1867, received one of the honors of his class and served one year as interne in St. John's Hospital (now the Good Samaritan), and from this institution received an honored diploma. He was born in Cincinnati, August 20, 1840, son of the late Professor Joseph Herron, A. M., of "Herron's Seminary," an early Cincinnati college of the highest order. His mother's maiden name was Cordelia Ann Weeks, daughter of John Weeks, a builder of the first steamboats on the western waters. She was born in 1815, married in 1838, and died March 9, 1893. Professor Joseph Herron was born in 1809 and died March 25, 1863. Dr. Herron finished his education in his father's college in 1857. Soon after leaving school, his health, having been impaired by rapid growth and confinement at study, he commenced to learn the trade of steamboat carpenter, with his uncle, Samuel Startzman. He served his three years of apprenticeship, and a short time as full carpenter, assisting in building some of the finest vessels upon our western and southern waters. He also attended night school through the winters, also the school of design in the Mechanics' Institute, and from this institution

received a diploma. In the fall of 1859 he entered the office of Dr. Tom Wood and began the study of medicine, a desire that had been uppermost in his heart for years. He was a member of the Gymnasium Light Guards and served in the Cincinnati Zouaves. In the midst of his studies the war cry was sounded, and with the call for troops, and on his 21st birthday, August 20, 1861, he enlisted in Fremont's Body Guard (Cavalry), Captain J. L. Foley's company, Company C (called the Kentucky company), for three years in the war, and in two days started for St. Louis, Mo.; where he went into camp. Having had experience in the school of the soldier he was appointed drill master, and soon after promoted to corporal. The Body Guard quelled many riots and saved St. Louis from the hands of bad men and may be total destruction. Several weeks later he started for Southwestern Missouri to assist in the capture of General Price and his army. Was in many skirmishes and guerrilla fights in scouting and foraging, finishing his western campaign with Fremont in the great and terrible "hand-to-hand" fight at Springfield, Mo., against great odds, in "Zagony's Ride to Death." The guard, 152 strong, fought and put to flight 2,200 of the enemy, killing over 200 on the field, not to speak of the wounded, and held the town. The army soon after returned to St. Louis. After Fremont's recall the Body Guard was mustered out of the service. Upon his return to Cincinnati the United States Sanitary Commission called for help. He enlisted and assisted in the care of the sick and wounded at Pittsburg Landing and Shiloh Church. Also assisted the surgeons in cutting off arms and legs that could not be saved. In the spring of 1862 a call was made for sailors for the new gunboats built for the western waters. He immediately enlisted as a sailor,

*Thomas G. Herron.*

and was shipped to Cairo, Ill., and placed on board the United States steamer Carondelet,

where he served as captain's clerk, ship's steward and paymaster's clerk, and for bravery up the Yazoo River, in his attempt, with ten men, to capture the Rebel ram Arkansas, was promoted to acting-master's mate, and later, for quelling a mutiny on board ship, was promoted to acting ensign. He served through the Mississippi squadron, Tennessee and Cumberland River fleets; also, up the Red, White and Black River expeditions. At the fitting out of the Red River expedition he was detailed as one of the picked officers to serve in that perilous expedition. He assisted in building the dam on the shores of Red River, which was constructed for the purpose of getting the United States gunboats and monitors over the shoals and out of Red River. Just before the completion of the dam, his boat, the United States steamer Covington, with the United States steamer Signal, was ordered to take the United States transport Warner to the mouth of Red River. The fleet had reached a point about fifteen miles above Fort Densey, and had anchored for the night. Early the next morning General Dick Taylor opened upon the three boats with eighteen pieces of artillery and 6,000 men, and with such destructive effect that the Warner was forced to surrender. Then concentrating their fire upon the gunboats, though fighting well, the Signal was soon disabled and lowered her flag. The Covington was doing very effective work with her fifty-pound Dahlgren, thirty-pound Parrott and twenty-four pound howitzers until the fire of the sixteen or eighteen guns of the enemy, besides thousands of small arms, from nearly every point of the compass, disabled the Covington, killing and wounding many on board, perforating the boilers (scalding engineer and firemen), cutting rudder away, besides destroying her upper works with thousands of bullets. There remained just enough steam in the boilers to work her into shore and make her fast. Even after this the fight was continued until several guns were disabled. The gunner's mate was killed in the magazine door, and Master's Mate Grosse (in charge of the magazine), was cut in two by a shell. Ensign Herron then gave up the fight, though he would not haul down the flag, but ordered the men to arm themselves to the teeth, carry the wounded men on shore, and then escape to the woods. The men ran the terrible blockade of all the firing, a distance of two squares, before reaching cover or woods. Many never reached a place of safety. Ensign Herron then spiked all the guns, and carried seven shovels of hot coals from under the boilers and placed them on the deck over the magazine. The deck soon caught fire and burned through to the zinc; this melted, and as the hot coals dropped into the powder, he then ran forward, out the open port, and was about to jump off, when she blew up, destroying the vessel and tumbled the Ensign into the water and mud. Though badly burned, he gained his feet, and under cover of the smoke, ran up the bank and joined his little squad of men. About thirty were killed and forty wounded. The Rebels crossed the river and started after them; chased them with bloodhounds; seven were torn to pieces by the dogs; two took to the trees, and were shot down and dropped into the mouths of these animals. After a chase of about fifteen miles the dogs led the enemy to the hut where our subject had crawled in to die. They hauled him out and stood him on his feet, and prepared to hang

and afterward make a target of his body. But their lassoes were not long enough to reach the first limbs of the tall pine trees, and while hunting for a tree, an Amazonian woman picked him up and carried him to a hut and covered him with clothes, where he remained two days and two nights. Her husband afterwards piloted him to Red River (nine miles) and to Alexandria, thirty-five miles, and before reaching Alexandria was picked up by a transport flying the Star Spangled Banner and was safe. He came out of Red River on the United States steamer St. Clair, and was honorably discharged from the United States Naval Service, September 25, 1865. After returning to Cincinnati our subject prosecuted his medical studies under Professor Roberts Bartholow, and graduated at the Ohio Medical College, March 1, 1867. In that same year he married Elizabeth, daughter of Rev. William H. Sutherland, D. D., a distinguished minister of the Methodist Episcopal Church. Mrs. Dr. Herron was a graduate of the Wesleyan Female College, of Cincinnati, Ohio. She is an active worker in church and missionary work and Women's Relief Corps of the Grand Army. In 1888 she was Department President of the Women's Relief Corps of Ohio. Six children were born to Dr. and Mrs. Herron—Joseph S., Verna, Wright, William, Earl and Thomas, Jr. Of these Joseph graduated at West Point and is a Lieutenant in the United States service, First Cavalry, United States Army. William is connected with the advertising department of the Cincinnati Post. The family are members of the M. E. Church. Politically the doctor and his children are all Republicans. He has written many articles on medical subjects, the most important being his discovery and the successful treatment of "sunstroke" with the application of hot salt water instead of ice or ice water. By this method he has never lost a case among men or animals. This is now the accepted treatment of the Government in the West Indies and New South Wales. His specialty is diseases of women and girls, and in their treatment never uses the knife.

PALMER, Chauncey D., of Cincinnati, was born in Zanesville, Ohio, on September 18, 1839; son of Micah and Harriet (Sherman) Palmer, natives of New York State. Micah Palmer was a carriage-maker by occupation, and died in 1878, aged seventy-six years; his wife, Harriet (Sherman) Palmer died in 1895, in her eighty-eighth year. She was a direct descendant of Roger Sherman. Her father was David Sherman, a farmer by occupation, who fought in the Revolutionary War, after which he was pensioned by our government. He died in 1838. All of Dr. Palmer's ancestry have been long-lived, and he is the youngest in a family of six children, four of whom are now living. He was educated in the schools of Cincinnati, and was graduated from Woodward High School in June, 1857. Among his classmates at this institution who have gained distinction in life may be mentioned Gen. Michie, of West Point; Rev. T. F. Caskey, of Germany; Noble K. Roysce, deceased, and Herman H. Kashig, prominent instructors in the schools of Cincinnati. For one year following his graduation Dr. Palmer continued his course in Woodward, in the study of the ancient languages, after which, for two years, he became a public teacher. He commenced the study of medicine in 1859, and graduated in medicine in 1862 from the Medical

College of Ohio. Shortly afterwards he was a permanent resident physician of the Good Samaritan Hospital, a position he held for one year, when he entered the federal army and served two years as surgeon in the general hospital at Camp Dennison, Ohio. He then returned to Cincinnati and opened an office for the practice of his profession on Freeman street, near Poplar, where he remained one year, then removing to the corner of Baymiller and Findlay streets, where he had previously built a residence. He resided there for twelve years, and in 1880 removed to a larger and improved residence, No. 308 West Seventh street, which was also built by him. In the fall of 1893 he again built a handsome modern colonial residence, with offices, containing all the modern improvements for a physician, in Avondale, Cincinnati, where he now resides. Dr. Palmer was married in 1863 to Miss Helen, daughter of Joseph Taylor, of Cincinnati. The lady was suffering with consumption at the time, and only lived eighteen months after her marriage. The Doctor was again married the second time in 1868 to Miss Adelaide, daughter of Barton White, of Cincinnati, a direct descendant of Peregrine White, whose parents came to this country in the Mayflower. This union has been blessed with two sons—Elliott B., born December 27, 1870, who graduated from the Cincinnati University in 1893, and W. Dudley, born February 5, 1877, now attending the Cincinnati University. Dr. and Mrs. Palmer and sons are members of the Avondale Presbyterian Church, but are in no sense sectarian in religious belief. The Doctor is a member of the Ohio State Medical Society, of the Cincinnati Academy of Medicine, of the Cincinnati Obstetrical Society and the American Gynecological Society. He has been president of both of the local societies. In 1869 he was appointed Professor of Obstetrics and the Diseases of Women in his alma mater, and still holds that position. He has been Professor of Gynecology in the Presbyterian Hospital and Woman's Medical College in Cincinnati; is Consulting Gynecologist of the medical staff of the German Protestant Hospital and to Christ's Hospital. Since 1886 he has been Obstetrician and Gynecologist to the Cincinnati Hospital. He is medical examiner for the Mutual Benefit Life Insurance Company. On May 6, 1888, Dr. Palmer was thrown from his carriage, because of a fractious horse, while descending from Walnut Hills, and narrowly escaped death. He received a severe concussion of the brain, remained unconscious for several weeks, following which his left side became partially paralyzed. His recovery was considered very doubtful for weeks, but by careful and skillful medical attendance, rendered by Dr. P. S. Conner, he recovered, so that he could be removed to the seaside, where his recovery was more rapid. Returning home after some four months, being still unable to practice his profession, he spent some six months more in California. Returning to Cincinnati, he resumed his practice about one year after the accident. Dr. Palmer has written for several medical journals and books. Among these contributions may be mentioned "Intra-Uterine Medication," "Tapping for Ovarian Cysts," "Papilloma of the Female Bladder," "The Unity of Medicine," "The Present Status of Gynecology and Its Relations to General Medicine," "The Obstetrical and Gynecological Uses of Electricity," "The Early Diagnosis of

Uterine Cancer," "Laparotomy and Laparo-Hysterectomy for Uterine Fibroids," "Dysmenorrhœa, Its Essential Nature and Treatment," "Abdominal Section, Its Value and Range of Application," "What is the Best Management of Occipito-Posterior Positions of the Vertex?" "Intermenstrual Pain," "Is Craniotomy Ever Justifiable on the Living Child?" "Gynecology and General Medicine, Their Reciprocal Relations," "What is Best Method for Perineorrhaphy?" and "What is the Best Treatment for Fibroids of the Uterus?" He is one of the authors of the "American System of Gynecology;" also of the "American Text Book of Obstetrics," and of Coe's "Clinical Gynecology." He is the designer of several instruments for obstetrical and gynecological purposes. For instance, a long and short obstetrical forceps, a straight trepan perforator, several forms of vaginal specula, an intra-uterine medicator, uterine curettes, an intra-uterine tube for irrigation, and uterine dilators. Several of these instruments have received strong commendations from many sources. Politically the Doctor has always been a strong Republican, and is a firm believer in a protective tariff. He is one of Cincinnati's most prominent physicians, and enjoys a large and lucrative clientele. He has won for himself a host of admiring friends. His practice for several years has been almost exclusively limited to obstetrics and gynecology.

*Sara M. Crosby.*

CROSBY, Sara M., of Cincinnati, Ohio, is a self-made woman. She was born in Lawrenceburg, Ind., where she lived until she was in her eleventh year, at which time she moved to Cincinnati, Ohio. Owing to the care at a very early age of an invalid mother, her advantages for an education were limited. Privately she pursued studies of her liking under efficient teachers and with marked success. At the age

of seventeen the loss of her mother, to whom she had been a devoted daughter and a faithful and untiring nurse, fell on her with almost crushing weight. After three years of private life in the pursuance of her studies, at the age of twenty, she entered the New York Training School for Nurses, attached to Bellevue Hospital, where she acquitted herself with great credit, both to herself and her superiors, carrying off the honors of her class. While there she was especially urged by the late Dr. Wm. Fruitnight to enter upon the pursuit of medicine promptly. After her return to Cincinnati she at once entered the Eclectic Medical Institute under the late Dr. John M. Scudder. After a course in that college she graduated, and at once took up the practice of medicine. She has aided in the establishment of training schools connected with three different hospitals. Since 1885 she has been enjoying a lucrative practice in Cincinnati, where she is honored by all who know her, and beloved by a large circle of patrons and many friends.

HUNT, Stella, of Cincinnati, Ohio. When Pulte College opened its doors to women in 1879 its first woman applicant was the subject of this sketch, a young high school girl, a graduate from the Woodward High School of Cincinnati. Pulte College, which was established in 1872, had heretofore admitted only male students. Miss Hunt entered for a three years' course. The second year, in competition with the male students, she took the first prize in physiology for the best examination and notes on that subject. The third year, she received honorable mention for a percentage of ninety-four in the final examinations and was also awarded the first clinical prize for the best record of clinical cases, presented to the class during the year. In 1882 she received the degree of Doctor of Medicine. Dr. Hunt located in Cincinnati. In connection with her practice, for several years she was dispensary physician, and later on one of the attending physicians at the Ohio Hospital for Women and Children at Cincinnati. In 1892 the doctor sailed for Europe spending two years abroad, in the Paris hospitals, giving special attention to the diseases of children and obstetrics. While in Paris she had conferred upon her by the French University "*Le titre onereux du grade de bachelier et sciences restreint et de l'enseignement secondaire (lettres-Philosophie)*." On her return from Europe the doctor resumed her practice in Cincinnati. She is Professor of Physiology at her old Alma Mater, Pulte Medical College, and is the first woman appointed on the faculty of that college. She is also one of the lecturers at the Training School for Nurses at the Ohio Hospital for Women and Children. The doctor is located at 28 East Seventh street, Cincinnati, Ohio.

DILLMAN, Lurton Dunham, of Connersville, Ind., was born in Preble county, Ohio, September 18, 1850. He was one of a large family. His father was of German descent, and his mother of Scotch. His father was an extensive farmer. The early years of our subject were spent on his father's farm, the winters in the country schools. A great desire was always had for a thorough education, he early conceiving the idea of the medical profession, this being instilled by the family physician, Dr. Lurton Dunham, one of the most eminent physicians of western Ohio, after

whom he was named. Our subject spent a year at the National Normal University when eighteen years of age, and after teaching school a few years returned to the university and took the degree of Bachelor of Sciences, a three-year course. Three years were spent in study of medicine, Dr. James S. Ferguson, the surviving partner of Dr. Dunham, being his preceptor. During this time two full courses of lectures were attended at the Ohio Medical College, Cincinnati, he graduating in March, 1878. His first practice was at Brookville, Ind. Four years of active practice among the best families of Franklin county was enjoyed. Receiving an appointment on a pension board, an appointment by President Hayes, he removed in 1882 to his present location, Connersville, Ind., where he has one of the largest and most lucrative practices of any physician of the county.

*Lurton D. Dillman*

While our subject is a general practitioner, he is inclined to special lines, that of nose, throat, ears and lungs. Certain hours each week are devoted especially to these ailments. A part of the year 1890 was spent in New York Poly-clinic and Post-Graduate Schools studying his specialties, since which time a number of fine operations have been performed, especially in nasal and tonsillar work. He is an active member of the Fayette County, Union District (of a part of Ohio and a part of Indiana) and Indiana State Societies, being for three years secretary and executive officer of the Union District and president a number of years of his county society, and for several years health officer of Fayette county. Dr. Dillman is now President of the Union District Medical Association, which is composed of the leading medical men of the counties of Wayne, Union, Rush and Fayette, of Indiana, and Preble and Butler, of Ohio. He is also a member of The Board of Education of this city. Soon after beginning his life work Dr. Dillman was married, March

13, 1879, to Flora I. Tidball, daughter of the late Dr. David L. Tidball, of Cincinnati, Ohio, and surgeon of the Thirty-fifth Illinois infantry. From this union three daughters were born. The Doctor is a member, with his interesting family, of the Presbyterian Church, of Connersville, he being a ruling elder of that organization. Being a member of many different organizations, his acquaintance is large, and he enjoys the respect and confidence of the people of his county, both as a citizen and physician.

LINE, Benajah Ayers, of Alexandria, Ind., was born April 22, 1836, in Miami county, Ohio. His father, Henry J. Line, was of English and German descent; his father, Samuel Line, being English, and his mother Esther Line, née Baltzell, was of German blood. They were natives of Pennsylvania, and moved to the present site of Cincinnati at the close of the Eighteenth Century. His maternal grandparents, Benajah Ayres, and his wife, Susan, née Ferris, were natives of New Jersey, and were also early settlers of Hamilton county, Ohio. Both families subsequently removed to Miami county and settled near Piqua, Ohio. In the fall of 1847, when the subject of this sketch was in his 11th year, his parents removed to Grant county, Indiana, and settled near the town of Marion. Up to this time he had very limited school privileges, and for two years more they were no better; but in the spring of 1849, at the village of Dora, Wabash county, Indiana, he had better educational advantages in the village schools. One of his teachers, Enoch H. Lowe, was a student of medicine and inspired him with a love of books and of knowledge, especially of the human system and the science of medicine. But his father's failing health made it necessary that he should quit school and assist in the support of the family. But determined to succeed, he improved all odd time nights and Sundays, and assisted by his mother, who was an educated lady, and his two older sisters, who had had more time at school, he prosecuted his studies so successfully that in the fall of 1856 he began teaching three miles west of the present city of Alexandria. He was a successful school teacher and continued in that calling as a means of livelihood and of opportunity to pursue his cherished design. During the next four years he gave his whole time to the study of medicine, and in 1860 he became a student of Dr. Joseph Weeks, of Mechanicsburg, Henry county, Indiana; and the following October entered the Physio-Medical Institute of Cincinnati, Ohio, and remained the full term sixteen weeks. At the close he returned to the home of his parents, near Alexandria, the scene of his early pedagogy and place of present residence. He opened an office in the hamlet of Osceola, in June, 1861, but in September following, at the earnest solicitation of former friends, he removed to Dora, Wabash county, and commenced practice among the friends and scenes of his youth; but in October closed his office and returned to Cincinnati and re-entered the Physio-Medical Institute, and at the close of the term graduated February 5, 1862. Dr. Line returned at once to Dora and entered into an active and successful practice, and continued up to his enlistment in the Federal Army, Company I, Forty-third Indiana Infantry, in the fall of 1864, and remained in the service until the close of the war. He was married February 5, 1863, and is the father of five

children, four sons and one daughter, all surviving. On his return from the service he located in the town of Antioch, now called Andrews, Indiana, in Huntington county, where he continued in an extensive and lucrative practice until his health failed. Always religiously disposed, he deeply felt the responsibility devolving on him as a teacher of youth, which led him to seek divine help, and in the fall of 1859 was powerfully converted when alone in the woods, but he did not find a church home until after he had located in Antioch. In the winter of 1866-67, near the holidays, he united with the M. E. Church, and was licensed to exhort in 1868, and to preach in 1873, and was ordained local deacon by Bishop Peck at a session of the North Indiana Conference, held at Anderson, Ind., April 7, 1878, having been active as a local preacher, and his labors have

*B. A. Line*

been owned and blessed of God. In the fall of 1887 he removed to Alexandria and opened an office for the treatment of chronic diseases, but the demands of his patrons has led him into a general practice in connection with his specialties. Early in his professional career Dr. Line was very successful in the treatment of diseases peculiar to females, especially chronic ailments, and was led to make it rather a specialty; and many a woman given up to die by friends and former medical attendants is living to-day to testify to his success and skill in this special field. Later the doctor was led in the same way by signal success in the treatment of diseases of the male generative system, and many men rejoicing in restored manhood and domestic felicity are ready to testify (but in a private way) to his skill in this important field. In the study of this special line he found that the rectum is implicated in almost every instance in these cases and led him to include in his specialty all rectal diseases. And for the last

twelve years made a specialty of diseases of the genito-urinary system, which includes all female complaints and all diseases of the rectum, and has supplied himself with instruments and appliances for the successful management of all such cases. His treatment of piles, fissures, ulcers and fistulas is very successful and largely original. Dr. Line has given considerable attention and time to the study of electricity, especially as to its use as a therapeutic agent, and prizes highly the Faradic current as a tonic to flabby and relaxed tissues or structures. He believes its effects are largely due to the action, motion, or exercise it gives the parts, thus inviting the blood pabulum and aiding nutrition. In the spring of 1872 Antioch was visited by a severe epidemic of cerebro-spinal meningitis, and Dr. Line successfully treated twenty-eight cases during its stay, and has never lost a case since, though having met several, as it has appeared sporadically at different times. Dr. Line has had a fair share of successful surgical practice, and saved many useful members where others wanted to resort to amputation. Believing in conservative surgery he successfully carried it into practice, and in operative gynecology and orificial surgery he is governed by the same principles and seldom in an extensive practice resorts to the knife. In the fall of 1891 Dr. Line was called to the Chair of Materia Medica in the Chicago Physio-Medical College, but ill health prevented him filling the place until the last month of the term, when he delivered some thirty lectures, which were well received. Continued bad health prevented his further continuance in the position. Dr. Line is an active and close student abreast with the times, a liberal progressionist, a reformer in the fullest sense, and with the courage of his convictions, and in touch with all the moral reforms of the day, with voice, pen and purse tries to contribute his part to the world's progress.

**SIEWERS, Sarah M.**, of Cincinnati, Ohio, was born in that city March 1, 1855. She inherits her love of medical and missionary work from her two grandfathers. Her paternal grandfather was a Moravian minister from Prussia, who married a Danish lady and then went as missionary to the West Indies, where the Doctor's father was born. Her maternal grandfather was Dr. Emanuel Carpenter, of Lancaster, Pa., whose ancestor, Heinrich Zimmerman, emigrated from Switzerland in 1708, and had his name changed to Carpenter by Wm. Penn; his wife was Sarah Stevens Sangston, of Baltimore, Md., whose ancestors were Virginians, but originally English and French. The Doctor spent the first three years of her life in Cincinnati, then lived on a farm in Kentucky until fourteen, when her parents removed to Newport, Ky. Here she attended the High School, where she afterwards taught. While teaching anatomy and physiology she went to the Eclectic Medical Institute in Cincinnati to perfect herself in those branches, intending to make them a specialty. Here she found medicine so decidedly to her taste that she took the full course and abandoned teaching. Her medical preceptor was Dr. Henry Gunkel, of Newport, Ky., one of the profoundest of America's physicians. The Eclectic College was the only one in Cincinnati admitting women at the time, so with that the Doctor had to be contented, although homeopathy was her choice. Here she received her degree in January, 1891. Since

that time she took a full term in the Woman's Medical College of the old school, and served three years in the dispensary and free wards of the Ohio Hospital for Women and Children, which is of the homeopathic school, at the same time building up a private practice, having an office in Cincinnati and one at her residence in Newport. On the death of her mother she gave up her office and residence in Newport, and removed to her present location on West Sixth street, in Cincinnati, where she was summoned to take charge of the practice of Drs. Jennings and Spencer, two sisters who had built up a national reputation, as well as a large local practice, and were about to seek rest and change of climate in San Diego, Cal. This is principally an office practice, general medicine, with a pre-eminence of gynecology. Dr. Siewers inclines

*S. M. Siewers*

strongly to surgery, having a natural skill in the handling of instruments, which she inherits from her father, an inventor and manufacturer of tools and surgical instruments. She found, however, so much needless and reckless cutting practiced that it has made her very conservative; she takes more pleasure in preventing operations than in performing them, and is doing her best to stem the current of laparotomies and ovariectomies that are needlessly despoiling the womanhood of the land and slaughtering the innocents. This operation is becoming so common that it has almost become a fad, and is performed on the slightest pretext by unprincipled surgeons, who would rather obtain a large fee for one morning's cutting, even if it may cause death or imbecility, than to patiently treat a case for several months. The Doctor knows whereof she speaks, for she has cured many women by patient treatment and simple remedies who had been told that an operation was their only hope of relief.

SMITH, E. W., of Terre Haute, Ind., was born on a farm in Johnson county, Ind., Jan-

*E. W. Smith.*

uary 2, 1858, where his early life was spent. After completing his course in the common schools, he entered the University of Nashville. In 1876 (centennial year), having completed his course, he located in Indianapolis, devoting his entire attention to art. In this he was eminently successful. Having had from boyhood a burning desire to become a surgeon, he grew dissatisfied, and in the fall of 1887 entered the Indiana Medical College, graduating in 1890. In 1891 he entered medical college at Cincinnati, Ohio, graduating. From Cincinnati the Doctor went to Nashville, Tenn., for the purpose of taking a special course in surgery, completing his course in the Barnes Medical College, at St. Louis, in April, 1893. He then returned to his large practice in Terre Haute, which has constantly increased. He has performed numbers of capital operations, recognized by the profession at large as among the most difficult on record, as is to be seen from the few reported in medical journals. Especially worthy of note are those reported in the *Medical Age*, June 11, 1894, entitled "Seven Cases of Laparotomy without Irrigation or Drainage," and a "Case of Brain Surgery," in the *Medical Mirror*, September 1, 1891. Dr. Smith is also an expert electrician and electrologist. His associates pronounce him a mechanical genius. For some time he has devoted his entire energies and all spare time to the construction of electric batteries and machinery of his own invention, which have proven to be marvels of excellence and skill. In diagnosis of internal diseases the Doctor uses the X rays made by a machine of his own invention and construction. He is master of medical electricity. He generates and applies ozone in the

treatment of catarrh and consumption. Many cases by this method he has completely cured. Ozone has been acknowledged by the most eminent medical men, both in Europe and America, as an excellent remedy for consumption.

BUCKNER, James Henry, of Cincinnati, Ohio, was born in Burlington, Boone county, Kentucky, November 25, 1836. His paternal great grandfather, Thomas Buckner, a wealthy Englishman, settled in Virginia several years prior to the Revolution. Many of the family became famous in American history. His father, Henry M., was born in Caroline county, Virginia, and moved with his parents to Fayette county, Kentucky. At an early age he learned the mercantile business with his brother at Georgetown, Ky., and subsequently established a business for himself at Burlington, Ky. In 1828 he was married to Etheline E., daughter of Captain Jack Conn, a wealthy farmer residing near Centerville, Bourbon county, Kentucky. The latter was in his day a man noted for his unflinching courage and integrity. He participated in the Battle of the Thames, on the 5th of October, 1813, as a member of a Kentucky company of sharpshooters; and just before the close of the fight killed a stalwart Indian. He was told by one of the prisoners, a French surgeon, that the dead Indian was Tecumseh, the famous Indian warrior. At two years of age James Henry Buckner was brought to Covington, Ky., where he attended the private schools; at the age of nine he entered the preparatory department of the Cincinnati College. In 1847 his father, Henry M. Buckner, retired from active mercantile business to his farm, known as "Edgewood," near Erlanger, Kenton county, Kentucky, where James remained until the age of fifteen; when he was placed under the tutorship of Professor De Soto,

*James Henry Buckner.*

of Centre College, Danville, Ky.; he subsequently went to the Academies at Exeter, N. H., and

Groton, Mass., matriculating the following year at Dartmouth College. He returned home in the spring of 1857, and began the study of medicine with Dr. Evans, a prominent surgeon of Covington, Ky. He soon after removed to Cincinnati, and continued his studies with Drs. W. T. Taliaferro and L. M. Lawson. In 1858 he entered the Ohio Medical College, where he took three courses of lectures, graduating in the spring of 1861. He then formed a partnership with his preceptor, Dr. Taliaferro. He was married October 17, 1861, to Miss Jane Olivia Ramsey, step-daughter of his preceptor and partner. Two sons were the result of this union, William Thornton and Henry Alexander. His estimable wife died May 3, 1892. In September, 1861, he was appointed examining surgeon of the United States for naval recruits at Cincinnati, Ohio, where he was associated with Captain, afterwards Commodore Winslow, who, as commander of the Kearsarge, made the famous fight with the Alabama. Dr. Buckner was afterwards assigned to duty as surgeon of the gunboat Cairo. After the fall of Fort Donaldson the Cairo was the first of the fleet to reach Nashville. In the summer of 1862 Dr. Buckner resigned from the service and resumed his private practice at Cincinnati. In 1862-63 he was Demonstrator of Anatomy in the Ohio Medical College. From 1866 to 1871 he was a Professor of Physiology in the Cincinnati College of Medicine and Surgery. In the latter year he was elected to fill the Chair of Ophthalmology and Otolaryngology, made vacant by the death of Dr. Taliaferro. He was at the same time on the staff of the Good Samaritan Hospital, where he delivered clinical lectures on diseases of the eye and ear. He resigned his several positions in the fall of 1872, in order to take a foreign tour, during which he visited the principal capitals of Europe, and took a special course of studies on the eye and ear at Vienna. After traveling through Italy he returned via England and Ireland to America. He then resumed his place in the hospital, and was subsequently elected to the staff of St. Mary's Hospital, in special charge of ocular and aurial diseases, which position he held for fourteen years, resigning in the spring of 1890. In 1878 he was elected president of the Academy of Medicine of Cincinnati. In the summer of 1882 he was elected professor in the Toledo Medical College, delivering a course of lectures on diseases of the eye and ear. Was elected president of the Walnut Hills Medical Society in January, 1887. In 1894 he was elected vice-president of the Ohio State Medical Society, is a permanent member of the American Medical Association and the State Medical Society. He has contributed to the literature of his profession a number of valuable articles on diseases of the eye, ear and throat, surgery, and on chloroform. Dr. Buckner is still actively engaged in the practice of his specialties in Cincinnati, Ohio.

CAREY, Milton Thompson, of Cincinnati, Ohio, was born near the town of Hardin, in Shelby county, Ohio, July 22, 1831. In early boyhood he removed with his parents to the town of Sidney, the county seat of Shelby county. He received all the scholastic training which was available in the town in which he was reared. At the age of 18 years he entered the office of Henry Smith Conklin, M. D., in the town of Sidney, and began the study of medicine. After three years of pupillage, and

three courses of didactic and clinical instruction in the Medical College of Ohio, in the city of Cincinnati, he graduated with the highest honors of the institution in March, 1851, and as a reward of merit, after a competitive examination, he was appointed resident physician of the Commercial Hospital and Lunatic Asylum, which occupied the present site of the Cincinnati Hospital. After his term of service expired in this institution he began the general practice of medicine and surgery in an office on Western Row (now Central avenue). In 1852 he was appointed attending physician to the Venereal and Contagious Hospital, which was located in Potter's Field, the present site of Lincoln Park. He was elected Demonstrator of Anatomy by the trustees of the Medical College of Ohio, in which capacity he served until the spring of 1856. He married Miss Cornelia M. Burnet, daughter of the Rev. D. S. Burnet and Mary Gano Burnet, November 6, 1856. He was elected Coroner of Hamilton county in the fall of 1857 and served two years. At the breaking out of the war he was examined by the State Board of Surgeons of Ohio, and was appointed and commissioned Surgeon of the Forty-eighth Regiment Ohio Volunteer Infantry, November 21, 1861, and assigned to duty as Post Surgeon at Camp Dennison, Ohio. After organizing a post hospital and assisting in the organization of several regiments, was ordered into active duty in the field. He took part in the Battle of Pittsburg Landing or Shiloh, and was captured on the first day of the battle, April 6, 1862, and was retained a prisoner of war until July, 1862, at which time he was paroled and returned home. Soon after being released he was ordered to report at Camp Chase, Ohio, and assigned to duty as surgeon of the post at that military station, in which capacity he served until October of the same year. He was then ordered by the Adjutant-General of the United States to join his command at Fort Pickering, Tenn. He was with the army at the assault of Vicksburg, and was likewise a participant in the battle of Arkansas Post, January 11, 1863. He was attacked with camp fever at Young's Point, Miss., and in consequence of which his health became so impaired that he was compelled to resign his commission and return home. Not content to remain idle in the great struggle in which the government was engaged, as soon as his health was somewhat restored he made application for, and received the appointment as Acting Assistant Surgeon, United States Army, and assigned to duty as Surgeon in charge of Woodward Post Hospital in this city, where he served until the war was well nigh over. As a medical officer in the army he attained some distinction as an operator. See reports on file in the Medical and Surgical Department, U. S. A., Circular No. 2, Page 23, Surgeon-General's Office, at Washington, D. C. Again after the close of the war Dr. Carey received civil honors at the hands of his fellow-citizens by being elected to positions of honor and trust within their gift. He was elected Coroner (a second time) in 1865 of Hamilton county; was elected to the Common Council in 1872, and served two years; was elected by the Common Council a member of the Board of Trustees of Longview State Hospital, where he served two terms; was elected to the Board of Education in 1880 and 1882. There are but few medical men in Cincinnati who have been

more successful in a financial point of view than he. He began poor, but by energy and industry his investments yield him a liberal competency. He is now 64 years of age, and although suffering from the result of privations and diseases contracted while in the United States service, he is still in the practice of his profession.

ANNIS, Eber Leander, of La Porte, Ind., was born in that city May 19, 1860, and is of Scotch-Irish descent. His literary education was derived from the common schools of his native city, and he is a graduate of the La Porte High School. He then studied medicine with the late Dr. Alexander G. Stevenson as preceptor, receiving the medical diploma from Rush Medical College, Chicago, February 22, 1881. Dr. Annis has resided and practiced his profession at La Porte since his graduation

*E. L. Annis*

with excellent success. He was appointed United States Pension Examiner during President Cleveland's first administration, and has served as Secretary of the Board of United States Examining Surgeon for Pensions for several years. Dr. Annis was elected coroner of La Porte county in 1888, and had been Deputy Coroner for several years previous to his election to that office. He has also been surgeon for the Lake Erie and Western Railroad at La Porte for many years, and also surgeon of La Porte County Hospital since 1891. He was appointed Health Officer of his county in 1894, and has served as health officer of his city for the past ten years. In 1896 the doctor was elected President of La Porte County Medical Society and had formerly served as Secretary of the same. Dr. Annis is an honored member of the Indiana State Medical

Society, National Association of Railway Surgeons, New York Medico Legal Society, American Medical Association and the State Surgical Society of the Lake Erie and Western Railway. He is also the regular appointed examiner of the following "old line" Life Insurance Companies: Mutual Life, of New York; New York Life, United States Life Insurance Company, of New York; Northwestern Mutual Life Insurance Company, of Milwaukee; Metropolitan, of New York; (ordinary) Travelers, Union Central, Hartford Life and Annuity, Nederland, of New York; Provident Savings Life Assurance Society, of New York, and the Northwestern Masonic Aid Association, of Chicago, Ill. Dr. Annis is engaged in the general practice of medicine and gives especial attention to general surgery and obstetrics in which he has had excellent success, never having lost a mother following labor or miscarriage, which may be due to his "good luck," but possibly to something else. In the editor's opinion such results are due to his rare skill, vigilance and judgment.

KELLER, Martha Jane, of Cincinnati, Ohio, was born in Hamilton county, Ohio, March 20, 1846, and in one of the old pioneer log cabins that was on the farm to which her parents removed but a few days before. She attended the district school from the age of four years to sixteen. Possessing always a great craving for knowledge, a strong desire to reason out and prove the truth or falsity of any statement made to her, she is interested in all progressive sciences or helps, toward the betterment of social conditions and the uplifting of humanity. Feeling that the greatest curse of the present age is in the ignorance of the girls and mothers on the vital point of health, she gladly gives more advice than medicine. She spent one winter at the Lebanon Normal School at the age of eighteen. She then entered the Art School of Cincinnati, then a part of the university. In six months she carried off the honors in the first grade, and in three years took the silver medal for excellence in drawing from the East over sixteen competitors; was appointed teacher immediately in the same school and given charge of the primary department, where she gave some of the now famous artists their first instruction. A part of her work was to teach perspective in drawing, and finding no existing work suited to beginners, she prepared and published in 1877 *Elementary Perspective*. She continued to teach in the Art School until 1887, when her health gave way and she resigned her position. Some years after this she went to Boston to enter the College of Therapeutics, under the direction of Dr. J. R. Buchanan. His deeper investigations in the realm of brain, mind and soul, and their interaction as explained in psychometry and medical electricity, proved to be the knowledge she was searching for, and added tenfold to her power to read character, as well as to learn the true method of diagnosing disease, going down to causes without asking questions about symptoms and effects. Hearing that the American Health College was founded on phrenology, she next investigated that by taking a course; also investigated Dr. Babbit's system of culture and cure. Has studied the various water-cure systems, Kneipp's being the most rational or natural method. Observing that different temperaments were liable to different diseases and degrees and severity in them, and the probable

chances of recovery in 90 per cent. of cases was owing to the power of mind over the body, phrenology became the foundation of her work, hence she uses the prefix phreno to the word psychometry to define her position in regard to her investigations and to the proof and application of which she will devote her future efforts. She has also made a study of magnetic healing, and made some remarkable cures by that method. Mrs. Keller expects shortly to publish a work on practical psychometry that will be a great help to our progressive science.

SWAFFORD, Benjamin F., of Terre Haute, Ind., was born in Randolph county, North Carolina, in 1833, and is of Scotch and Welsh ancestry. His education was derived from common and select schools, but was largely self-taught. His medical preceptors were Drs. York and McClure, of Paris, Ill. He was

*B. F. Swafford*

graduated at the Rush Medical College, Chicago, in 1858, and in that school was regarded as a fine anatomist. He supplemented his education by attending a course of lectures at his Alma Mater in 1866. Dr. Swafford has practiced his profession at New Goshen, Vigo county, Indiana, from August, 1855, to June, 1874, and since the latter date at Terre Haute. During the war between the States Dr. Swafford entered the United States service as Second Assistant Surgeon and was mustered out as Major Surgeon. The doctor has been what might be called an "all around" practitioner, and if not particularly brilliant in any department, he has done whatever came to him and has done it well. He has, perhaps, made his most satisfactory record to himself in the practice of medicine. He is regarded as well informed in the collateral sciences. The doctor has never asked for or held office outside of his military service. It would be an "o'er long a tale to tell" of the early struggles of the sub-

ject of this sketch, but it may be added that his father died before he was 7 years old, that his paternal grandfather cared for him until his 14th year, and after that, hard work, privation and self-denial enabled him to do the rest.

KELLEY, W. I., of Cincinnati, Ohio, was born on a farm near Fostoria, Ohio, February 7, 1838, and worked on his father's farm during his boyhood days, attending school in the winter and later at the Fostoria High School. When in his twentieth year he went to Fremont, Ohio, and commenced reading medicine with Dr. P. Beaugrand, one of the most noted physicians of that city, and remained with him three years, less the time spent attending medical lectures. He attended his first course of medical lectures in 1857-58 at the Cleveland Medical College, at Cleveland, Ohio, and in the fall of 1859 went to Philadelphia, Pa., and took a full course of lectures at the Jefferson Medical College and graduated from that college in March, 1860, and immediately returned to Fremont, Ohio, and formed a co-partnership with Dr. P. Beaugrand, his preceptor, and continued to practice medicine with him until May, 1862, when he went into the army as a State surgeon for Ohio troops, and served in that capacity until August 1, 1862, when he was appointed first assistant surgeon for the Fifteenth Ohio volunteer infantry, and was with that regiment until October 1, 1864, when he had to resign on account of ill health. During the time he was with this regiment it participated in the battles of Stone River, Chickamauga and the battles in and around Chattanooga, and went with Gen. Sherman on his march to the sea as far as Atlanta. In September, 1864, Dr. Kelley was promoted to the major surgeoncy of the Fifteenth Ohio volunteer infantry. Most of the time since the war he has been engaged in the practice of medicine, and for the past fifteen years has made a specialty of diseases of the bowels, and in 1884 located in Cincinnati and has confined himself to his specialty, limiting his practice principally to diseases of the rectum. He believes in a very conservative course of treatment of these diseases, and disapproves the use of so much surgery in their treatment, and says that any case of true hemorrhoids can be cured without surgery. He further says the frequent division of the sphincter muscle in the treatment of rectal diseases often results in weakening the parts so much that later in life complete control of the parts is much impaired. Dr. Kelley contributes articles for different medical journals on his specialty.

McCABE, Henry H., of Worthington, Greene county, Indiana, was born at Chillicothe, O., in 1834. He is of Scotch-Irish and German parentage. His preceptors were Dr. Crane and Dr. Malott, of Ohio. The doctor commenced the study of medicine quite young, afterwards for awhile abandoned it, and took a course in law, after which he resumed the study of medicine and graduated at Indianapolis in 1881 from the Indiana Eclectic Medical College, although he was recognized as the peer of any of the faculty before matriculating and in educational and scientific attainments the superior of any. He practiced awhile in St. Louis, also a few years in Chicago. While in Chicago he was a member of the Philosophic Society. Afterwards he practiced a number of years in Indianapolis, and for the last nine years has practiced at Worthington. The doctor belongs to no sect in medicine, and thinks there is but

one school—that is the rational. He has been in regular practice about twenty-five years. Dr. McCabe has been markedly successful in the practice of obstetrics, and in diseases of women and children. In his extensive practice he has never lost a patient in confinement, nor has he ever had a case of child-bed fever following any of his patients, and has never failed in controlling puerperal convulsions, with his own or other physicians' patients. Dr. McCabe has displayed much originality in the treatment of many diseases, especially so in the successful treatment of typhoid or enteric fever. He is an advocate of the germ theory of disease, and the cause of the self-limitation of disease is the natural anti-toxins that are elaborated by the animal economy, thus overcoming the toxin of disease. That the bile is a toxin to the bacillus of typhoid fever, hence the functions of the liver should be kept in activity, and that from one to two evacuations of the bowels should be maintained each day, as by this the bacilli are washed from the bowels, and the glands of Peyer and other intestinal glands will avoid perforation. He has held the position of local surgeon for the Pennsylvania Railroad Company; was a member of the Pension Board of Examining Surgeons of Greene county under President Cleveland's first administration; was Professor of Chemistry and Physiology for three years, and of Anatomy for four years; also, Demonstrator of Anatomy in the Indiana Eclectic Medical College. Dr. McCabe has made some important contributions to medical literature and science, among which is an original paper on the cause of animal heat, heredity and the evolution of man. Dr. McCabe from a youth has been a constant and industrious student in almost all branches of literature and science, particularly the physical sciences. Although he can read and translate four different languages, the German is his native tongue, the English having been acquired.

BARNHILL, John F., of Indianapolis, Ind., was born at Flora, Ill., January 2, 1865; his father was Robert Barnhill, Jr., his mother Angeline (Shirts) Barnhill. His grandfather, Robert Barnhill, Sr., was one of the earliest settlers of Indianapolis, entering a farm and building a cabin there in 1821. When a child he attended the country school through the prescribed course; then took a training in the Normal School, and when seventeen years old began teaching, which occupation he followed for six years, alternately teaching and attending Union High School until he graduated from the latter institution. Immediately after graduation he entered the office of Dr. H. S. Herr, studying with him until the opening of medical college, when he entered the office of Dr. Joseph Eastman, where he remained three years, assisting the Doctor in many important and difficult surgical operations, afterwards nursing some of the cases, and thus gaining a practical knowledge of them. Dr. Barnhill graduated from the Central College of Physicians and Surgeons in 1888, receiving a general average in the final examinations of 98½ per cent., entitling him to the gold medal offered for the highest average scholarship. He was also appointed by his class to deliver the valedictory address, which he did with credit. After graduation he entered the competitive examination for hospital and dispensary internes, passing with a grade that gave him choice of places. He chose the dispensary, and served his time as interne, after which he

located in Irvington, a college suburb of Indianapolis. Here, associated first with Dr. R. W. Long for two years, and then with Dr. T. L. Thompson for five years, he did the greater part of the medical and surgical practice, not only of the town, but of the surrounding country for many miles, and doing a considerable consultation practice with neighboring physicians and those in adjoining counties. In the fall of 1888 he was appointed to lecture in the Central College of Physicians and Surgeons upon female pelvic anatomy and embryology, which he continued to do for three years, when he was given the Chair of Physiology in the same college, which place he at present fills with credit to himself and the college. Early in his medical career he conceived a liking for the treatment of diseases of the nose, throat and

*J. F. Barnhill.*

ear, and, encouraged by the results of his practice in these lines, devoted a great deal of time and study to the practice of these branches, doing all the important surgical procedures commonly performed in the treatment of the diseases of the nose and throat, and obtaining a patronage, that extended throughout the State. Thus encouraged he determined in 1895 to limit himself to the practice of these branches, and being ambitious to be fully abreast with the times, he devoted a year to the study of these specialties under some of the masters in New York and some of the large European cities. During the year 1896 he continued his studies in the London Throat Hospital, and upon his return to America located in Indianapolis, at which place and its immediate vicinity he has spent the greater part of his life, and where he is now engaged in a large and successful practice of his chosen specialty. Dr. Barnhill is a member of his county and State medical societies, and as a delegate attended the American

Medical Association in June, 1898, at Denver, Colorado.

*Sarah J. Morrow.*

MORROW, Sarah J., of Richmond, Ind., was born and reared in Preble county, Ohio, eight miles northwest of Eaton, the county seat, on a farm. She is of Scotch-Irish descent, with a trace of German on her father's side. She was educated in the public schools; was a close student, standing at the head of her class. Her father was born at Waynesville, Ohio, and came to Preble county, Ohio, when six weeks old, the only inhabitants being wolves and Indians. Although the facilities for an education were limited, he made a representative citizen, filling many places of trust. He lived to the advanced age of eighty-six years, respected by every one. The Doctor's mother, Sarah Barr, with her parents, came from Pennsylvania when ten years old, and settled on a farm near to where her father lived. Her mother's father was a teacher, and spent his winters in following his chosen profession. The subject of this sketch read medicine with Dr. Mary F. Thomas, of Richmond, Ind., a year, and the winter of 1875-76 attended the Indiana Medical College at Indianapolis. Owing to the death of her mother, she remained at home with her father nearly four years, when she attended two terms at the Women's Hospital Medical College at Chicago, 1879-80 and 1880-81. After she returned from the above mentioned college she practiced with her preceptor, Dr. Mary F. Thomas, till the latter retired to her country home, when Dr. Morrow remained in her office and took charge of the practice. She was a physician in the Home of Friendless Women for three years. She is an honored member of the Wayne County Medical Society, having filled the president's chair and other places of trust. She belongs to the State Medical Society, having attended as delegate several times. She is medical examiner for Knights and Ladies of Honor and the Continental Fraternal Union. She makes

gynecology and obstetrics her specialty, having taken a special course in these two branches of practice. Her success in her chosen profession has been all that she could desire. While she has administered to the diseased conditions of her patients, she has not forgotten their bodily comforts, prescribing bread as well as medicine.

COVEY, Calvin Edson, of Detroit, Mich., was born at Grand Ledge, Mich., July 28, 1858. His family descent is from the better classes of English and German. His education was derived from public schools of his native city, a private academy and from the University of Michigan. His medical preceptor was his father, Calvin J. Covey, A. M., M. D., and he was graduated in medicine at the Hahnemann Medical College, Chicago, Ill.; and his medical education was supplemented by attendance at the New York Post-Graduate Medical School and Hospital, and special courses in the University of the City of New York, in the medical department of Columbia College, New York city, and in various New York city hospitals. Dr. Covey has practiced his profession in the cities of Grand Ledge, Port Huron and Detroit, Mich. He was Health Officer of Grand Ledge, president of the City Board of Health at Port Huron, chief of staff of the State Sanitarium, Dispensary and Polyclinic at Detroit, Mich. The doctor's practice has been limited to surgery and chronic diseases, and has had excellent success in these branches of the profession. He has from time to time contributed more or less to periodical medical literature, and has given courses of lectures in several Cincinnati and Indianapolis medical colleges. Dr. Covey is a thirty-second degree Mason, a Past Grand of the Odd Fellows, a Past Chancellor of the Knights of Pythias, a Forester, a Supreme Medical Director of the United Home Protector's Fraternity. The doctor came of a

*Calvin Edson Covey.*

medical family; not only his father and brother, but many of his uncles, aunts and cousins are

physicians. He is Secretary of the United States Medical Practitioners' Protective Alliance, President of the Eastern Michigan Medical and Surgical Association, President of the American Association of Physicians and Surgeons, and has been twice President of the State Eclectic Medical and Surgical Society of Michigan, Chairman of Sections on Pathology and Practice of Medicine, National Eclectic Medical Association, session 1895; member of the American Institute of Homeopathy, member of the American Society of the Arts and Sciences, honorary member of Indiana State Association of Physicians and Surgeons, the Indianapolis Academy of Medicine and the Ohio State Medical Society.

KEIPER, George Frederic, of La Fayette, Ind., was born in the city in which he resides, March 26, 1866. His ancestry are of German origin. His maternal grandfather emigrated

*George Frederic Keiper.*

to this country early in the present century. In the war for the independence of the colonies, his paternal great grandfather was captain of a company of patriots. Four of his uncles are physicians, and his father practiced medicine for nearly fifty years. After attending the public schools, the subject of this sketch attended DePauw University at Greencastle, Ind., graduating therefrom in 1887, with the degree of Bachelor of Arts. In 1890 the degree of Master of Arts was conferred upon him by his Alma Mater. His father and Dr. George F. Beasley directed his medical education as preceptors. He graduated in 1890 from the Department of Medicine and Surgery of the University of Michigan, at Ann Arbor, Mich. By visits to the large eye and ear hospitals of the country, the doctor has endeavored to supplement his medical education. Two months after graduation he commenced the practice of medicine in La Fayette. In 1891 he withdrew from general practice to give his entire attention to diseases of the eye, ear, nose

and throat, in which he has enjoyed a lucrative practice. In 1891 he was appointed expert eye and ear pension examiner for Northern Indiana. His reappointment dated from 1893. He is eye and ear surgeon to St. Elizabeth Hospital, St. Joseph Orphan Asylum and the Children's Home. Outside of medical study he finds some diversion in the realm of physiological psychology, and is a member of the Ethical Club, an exclusive society devoted to the study of psychological and ethical problems. He has contributed numerous articles to medical journals, a few of which have attracted attention abroad.

VIALLOX, Louis Henry, of Bayou Goula, La., son of Paul Louis (pharmacist and chemist) and Cecile (Le Blanc) Viallon, grandson of Henry M. Viallon, was born August 15, 1866, in New Orleans, La. He was educated in the Louisiana State University and Agricultural and Mechanical College, in Baton Rouge, La., but on account of sickness was obliged to leave school shortly before graduating; attended lectures at the medical department, Tulane University, of Louisiana, 1885-90, and was graduated April 1 of the latter year; commenced the practice of medicine in Bayou Goula, La., in 1890. Dr. Viallon is a registered pharmacist, and practiced some before beginning the study of medicine. He is a member of the Louisiana State Medical Society, Louisiana State Pharmaceutical Association, is local secretary-treasurer of Southern Home Building and Loan Association, of Atlanta, Ga.; is medical examiner of Security Loan Company, of St. Louis, Mo.; of the Penn Mutual Life Insurance Company, of Philadelphia, Pa.; of Local Branch, 796, Catholic Knights of America; is president of Branch 796, Catholic Knights of America; medical examiner for St. Gabriel Branch, Catholic Knights of America, No. 806. Dr. Viallon married November 21, 1894, Aline Laurence Ada, daughter of the Hon. L. Ulysse Folse, of Napoleonville, La. They have one daughter, Fleurange, an interesting baby of eleven months. Dr. Viallon's father is one of the best chemists and posted men in his profession. He was born in 1842, in the parish of St. John, and removed with his parents to New Orleans in 1856. He was educated at St. Joseph's College, at Bardstow, Ky., and received his pharmaceutical knowledge at Audubon College, in New Orleans. After several years of experience in practical pharmacy and chemistry, he occupied a prominent position in the establishment of A. K. Finlay, in New Orleans. There he remained six years, and then removed to his present location in Bayou Goula in the latter part of 1890. Mr. Viallon is a member of the State Board of Pharmacy, has served on the examining committee of the board, and is now president of the board for a term of four years, from 1897 to 1901. He was vice-president in 1895 of the Louisiana State Pharmaceutical Association, and in 1896 was elected unanimously president of the same association. He was one of the first men in Louisiana to see the advantages of the American Pharmaceutical Association, and became a member of the organization before its object was generally known here. He was last year appointed delegate to that body by the Louisiana State Pharmaceutical Association. Dr. Viallon is also a member of the K. of P., K. of H., American Legions of Honor and member of the Alumni Association of Tulane University of Louisiana. He was one of the first chancellor

commanders of K. of P., is now deputy grand chancellor for this district and representative

*L. H. Viallon*

of his lodge for the last eight years. [Since writing this sketch the editor learns that Dr. Viallon has been re-elected president of the Catholic Knights of America, and is medical examiner of Branches 796 and 806 of that organization.]

JENKINS, John F., of Tecumseh, Mich., son of Edward and Eliza (Embury) Jenkins, grandson of John Jenkins, who fought under Wellington at the Battle of Waterloo, was born September 10, 1834, at Napanee, Canada. His mother was a descendant from Phillip Embury, the first Methodist minister in America. Dr. Jenkins obtained a preparatory education at Newburgh Academy, Napanee Grammar School, and was graduated from the Normal School, Toronto, Ontario. He commenced the study of medicine in 1863, in St. Thomas, Canada, under Dr. John Wilson; attended two courses of medical lectures at the Department of Medicine and Surgery of the University of Michigan, and was graduated from the same in 1866. Commenced the practice of medicine the same year in Orland, Ind., but has been a resident of Tecumseh, Mich., since 1872. In 1869 and 1870 he took post-graduate courses in medicine at the College of Physicians and Surgeons in the City of New York and at the Bellevue Hospital Medical College. Dr. Jenkins is a permanent member of the American Medical Association; member of the Michigan State Medical Society; Northern Tri-State Medical Association; ex-Vice-President of the Southern Michigan Medical Association; member of the

American Public Health Association; and of the Ninth and Tenth International Medical Congress. He was health officer of Tecumseh in 1889. During the past fifteen years he has been a contributor to the *Journal of the American Medical Association*, in 1891 presenting a paper on "The Treatment of Spasmodic Asthma," and in 1896 a paper entitled, "Should the State Provide Hospitals for the Tuberculous Poor?" At the annual meeting of the Michigan State Medical Society in 1889 read a paper describing "A Case of Perityphilitic Abscess," and in 1897 a paper on "The Differential Diagnosis between Malarial and Typhoid Fevers." At a meeting of the Northern Tri-State Medical Association in 1894 read a paper entitled "Should Cases of Consumption be Reported to Local Boards of Health?" in 1896 a paper on "Some of Our Modern Therapeutic Resources." In 1890 Dr. Jenkins was delegated from the American Medical Association to attend the meetings of the British Medical Association, held in the city of Birmingham; also, to the Tenth International Medical Congress, commencing August 4, 1890, in the city of Berlin. While abroad he made a tour through Great Britain and Ireland, Belgium, Germany, Austria, Italy, Switzerland and France, visiting the principal hospitals of Dublin, Belfast, Edinburgh, London, Paris, Berlin and Vienna; also, the universities of Glasgow, Edinburgh, Oxford and Vienna. In his tour through Italy he visited the "House of the Surgeon," in Pompeii, the only vestige of a residence remaining of a first century physician. Married, in 1866, Miss Susan, daughter of Colonel James McQueen, of St.

*John F. Jenkins.*

Thomas, Canada. Their children are—Mabel, Florence and Milton Jenkins.

FEWEL, Richard Benjamin, of Montrose, Mo., born May 9, 1857, in Johnson county,

*Richard Benjamin Fewel.*

Missouri, is the son of Richard Benjamin and Nancy Anne (Avery) Fewel, grandson of Mason C. Fewel, who removed from Rockingham county, North Carolina, to what is now known as Windsor Trap, Henry county, Mo., in the fall of the year 1839. He is also grandson of Rev. Henry Avery, who went from Sparta, Tenn., to Tebo, Henry county, Mo., in 1831; settled and improved what is known as the old Avery farm. His house was the first one known in Henry county to have had a window glass in it; he put in two sashes with four panes each. He was the first justice of the peace, his commission dating from May 21, 1832, and at his residence was held the first court in Henry county in November, 1832. Richard Benjamin Fewel, Jr., attended the public schools; was a student at the Sylvan Academy, Lamar county, Tex., in 1870; at the Center Point Academy, 1871-72, Prof. Mitchell McCuistian, principal, and took a life scholarship at the Gem City Commercial College, Quincy, Ill., in September, 1876, graduating in the full course of that institution June 22, 1877. He began to read medicine in 1878, at Shawnee Mound, Mo., under Dr. John H. Bronaugh, at the same time becoming the junior partner of the firm of C. O. Fewel & Bro., Shawnee Mound, the firm having charge of the postoffice, handling drugs and doing a general mercantile business. Dr. Fewel finally sold out to his brother in 1880, in order to devote his entire time to the study of medicine. He attended two courses of lectures at the St. Louis Medical College, St. Louis, Mo., and was graduated March 3, 1881; also received the degree of Ph. D., from the College of Higher Arts and Sciences, Chicago, December 23, 1893. Dr. Fewel engaged in the practice of medicine at Ladue, Mo., from April, 1881, until February

1, 1882, when he removed to Montrose, and permanently located there. He was proprietor of the city drug store, at that place, 1882-86, and has since devoted his entire time to the regular practice of medicine and surgery. He is a member of the Henry County (Mo.) Medical Society, of the John T. Hodgen Medical Society, of the Central District Medical Society of Missouri, third vice-president in 1891, second vice-president in 1892 and first vice-president in 1894; a permanent member of the Missouri State Medical Association; member of Montrose Lodge, No. 408, A. F. and A. M.; past patriarch to the Royal Tribe of Joseph, Lodge No. 20, and past patron of Jephtha Chapter, O. E. S., Montrose. He was chairman of the Democratic county congressional convention, Clinton, 1892, and has been chairman of local conventions at various times. He was also delegate to various medical societies. Married, September 22, 1881, Miss Rosa Vickars, of Montrose, Mo.; to them was born one child, Richard Guy, who died August 8, 1884.

FORREST, John H., of Marion, Ind., was born in Logansport, Ind., August 27, 1858. On his father's side his ancestors were among the first settlers of Virginia, his great grandfather removing from Virginia to Maryland, where he entered the Revolutionary army and served with distinction. On his mother's side he is a descendant of the Longstreths. His great grandfather of that name served as a captain in the Revolutionary army, and later on settled in western Pennsylvania, where a number of descendants still reside. Dr. Forrest entered the office of Dr. J. B. Shultz, of Logansport, where he began the study of medicine. He first

*J. H. Forrest.*

attended medical college at Cincinnati, afterward in Chicago, where he graduated with the

highest honors of his class in 1880. Immediately after completing his course of study he located in Marion, Ind., and has resided there ever since. For fifteen years he has been connected with the surgical department of the Pennsylvania Railroad. He has also held the positions of city and county health officer, and as a member of the first City Council was instrumental in the enactment of the sanitary laws and regulations of the city. In May, 1895, while the Doctor was in Chicago attending the National Association of Railroad Surgeons, he received a telegram announcing his appointment as a member of the Indiana State Board of Health, an honor unsought and unknown by him until this announcement. This position he still holds, and in the faithful and intelligent exercise of the duties of the office has won appreciation of his merit from the citizens of his native state.

*John D. Hanrahan*

HANRAHAN, John D., of Rutland, Vt., son of James and Ellen (O'Connor) Hanrahan, was born June 18, 1844, in Rath Keale, County of Limerick, in Ireland. He attended the National schools in Ireland until he was eleven years of age, and later the public schools and the Free Academy in New York City. Commenced the study of medicine early in 1860, with Dr. John K. Wright, at that time located in Yorkville, N. Y. Attended four courses of lectures at the Medical Department of the University of the City of New York and was graduated from the same in March, 1867. In June, 1861, he was, on examination (not having graduated), appointed surgeon in the United States Navy, and served through the entire war. The vessels on which he served did duty mostly on the rivers of Virginia and North Carolina, where he did duty with the army as

well as the navy, thereby having the benefit and experience of both branches of the service, especially in the surgical line. In August, 1863, the vessel on which he was serving was captured at the mouth of Rappahannock river and all on board made prisoners. They were taken overland to Richmond and confined in Libby Prison. At that time the Confederates were very short of surgeons and medical supplies, and he was asked if he would go over to Belle Island and attend the Union prisoners. After consulting with his fellow prisoners he consented, and for six weeks he attended the sick and wounded Union prisoners faithfully, under very great disadvantages, as the supply of medicine and surgical appliances was very limited; after that he was paroled. While a prisoner of war he was treated with the greatest courtesy and consideration by the medical staff and officers of the Confederacy. After the close of the war he was settled in New York City for about one year, was then in Montreal about a year, and for the past twenty-eight years in Rutland, Vt. He was town and city physician of Rutland for many years, is now physician and medical examiner for St. Peter's Hibernian Society, American Order of Foresters, Catholic Order of Foresters, and Rutland Counsel Knights of Columbus, and examiner for several accident and life insurance companies. He is a member of the American Medical Association, Vermont State Medical Society, Rutland Medical Club, the first president of the Rutland County Medical and Surgical Society, and a member of the same since its organization. He is a director and consulting surgeon of the Rutland Hospital, and consulting surgeon to the Fanny Allen Hospital, Winooski, Vt., and a member of the Vermont Sanitary Association. During the twenty-eight years of his residence in Rutland he has had a very large and successful practice, especially in the surgical and obstetrical line, and it is said by many of his brother physicians that he has attended as many cases of confinement as any one of his age any where. Dr. Hanrahan has been an Irish Nationalist all his life and member of all the Irish societies, president of the Land League, etc.; president of Rutland village two years and trustee eight years and County Commissioner one year; president United States Pension Examining Board four years under President Cleveland, and treasurer of same board four years under President Harrison. He was postmaster of Rutland during the second term of President Cleveland. He has since its organization been an active member of the G. A. R.; is now surgeon of Robert's Post, the largest in Vermont; is also for the third time Medical Director of the Department; served on the staffs of three Commanders-in-chief—Veasy, Palmer and Weissert. Dr. Hanrahan is the author of several medical papers, has performed many surgical operations, and has served through several epidemics of small-pox and diphtheria. He has taken quite an active part in local, State and National politics, has served many years on the Democratic State Committee and has been chairman of the County Committee. He was delegate to the Democratic National Convention of 1884 and 1888, and Chairman of the Vermont delegation to the National Convention of 1892. He has always been a Democrat and always supported President Cleveland. Until the National election of 1896, when, although post-

master under President Cleveland, he espoused the cause of Hon. William Jennings Bryan and is an enthusiastic admirer of Mr. Bryan, and to-day firmly believes that he will be the next Democratic nominee and that he will be elected President. He is a member of the American Catholic Historical Society and was appointed a delegate from the diocese of Vermont by Bishop DeGoesbriand to the first American Catholic Congress and Catholic Centennial Celebration held in Baltimore, November 10, 1889. He is a member of the Rutland Board of Trade, a life member of the Rutland County Agricultural Society, a member of the Rutland Lodge of Elks, St. Peter's Hibernian Benevolent Union, American Order of Foresters, Catholic Order of Foresters, Rutland Counsel Knights of Columbus and the Young Men's Catholic Union. He was a director of the original Electric Light Company of Rutland, and a director of the Northeastern Fire Insurance Company for several years. Dr. Hanrahan was twice married; first, to Mary A. Riley; second, to Frances M. Keenan, daughter of Dr. John C. Keenan, of Rutland. He has five children living—May, Anna, Hugh, Frances and John P. Hanrahan.

FRIDGE, John Russell, of the Parish of Ascension, Gonzales, La., born July 14, 1862, at Baton Rouge, La.; is of Scotch-Irish descent, being the son of Alexander R. and Elizabeth (Brown) Fridge. His father was financially ruined by the late war, and was unable to give his children more than a common school education, and when he died in 1882 Dr. Fridge was obliged to assist in the support of the family. There were seven brothers, namely: Wm. O. Fridge, Alonzo A. Fridge, Silas C. Fridge, John Russell Fridge (the subject of this sketch), Rolland L. Fridge, Albert E. Fridge and Ollie D. Fridge, born in the order of naming; one sister, Mary Ella, now wife of Jas. L. Simmons. Dr. Fridge entered into trade in the spring of 1883, and continued with financial success until the fall of 1886, when all his earthly possessions were destroyed by fire. He matriculated at the Louisville Medical College, in Louisville, Ky., in 1887, taking a two-years' course, and graduating February 21, 1889, receiving a gold medal for excellence in clinical and operative surgery. He immediately commenced the practice of medicine in the Parish of Ascension, New River section, La., where he has since continued. He has taken part in nearly all of the major surgical operations of the present day, especially in laparotomies and capital obstetrical work. After the great devastation caused by the overflow of the Nita crevasse in 1890, and the Sarpy and Belmont crevasses in 1892, and of the Rescue crevasse in 1893, Dr. Fridge labored night and day, administering to the destitute poor, traveling altogether in a skiff furnishing medicines to hundreds of destitute sick and suffering families, and was the only physician in the overflowed district who so remained at his post in 1892. In consequence of his skill and this great labor of love, the people of his section of country will for ages and ages to come repeat the Doctor's name to their children with reverence and love. Dr. Fridge is a man of the keenest perceptions, and possesses a high order of professional ability, as well as a thoroughly well-read and posted man on almost any subject. Possessed of easy manners and affable disposition he makes friends rapidly wherever

he goes. Dr. Fridge was elected coroner for the Parish of Ascension in 1892, and filled that office with much credit to himself and to his constituency until 1896. He is a member of the American Medical Association, of the Louisiana State Medical Society, was United States examining surgeon for pensions from 1891 to 1894, was a delegate to the State nominating convention at Baton Rouge in 1891, to the Southern States' immigration convention at Asheville, N. C., in 1890, to the State anti-lottery convention at Baton Rouge in 1891, to the Southern cotton convention at New Orleans in 1893; is now medical examiner for the Knights of Honor, Woodmen of the World and several accident and life insurance companies. He is the author of a paper entitled "A New Method

*J. R. Fridge*

for Reuniting Fractured Patella," published in New Orleans *Medical and Surgical Journal*, August, 1889. Also an article on "Malarial Haematuria," read before the Louisiana State Medical Society at its regular meeting in New Orleans, La., in May, 1894, and published in the transactions of the society of that year. Dr. Fridge is also author of a paper entitled "Yeast Neucleic Acid," with special reference to its use in tuberculosis, prepared for the Louisiana State Medical Society, as its chairman of the section of materia medica and therapeutics, 1896; also several other important contributions to the medical literature of the present day. Dr. Fridge was married on November 14, 1892, to Miss Edna Earl, daughter of Frank E. and Anna A. (Simmons) Dawson, of Jackson, La. They now have one child, a girl, born October 19, 1893, whose name is Enna Pearl. The *New Delta*, a paper published

in the city of New Orleans, had the following to say of the marriage of Dr. Fridge: "Miss Edna E. Dawson, of Jackson, La., was united in matrimony to Dr. J. R. Fridge, of Gonzales, La., on Monday evening, the 14th inst., at 7:30 o'clock, Rev. John T. Sawyer, pastor of Louisiana Avenue Church, officiating. The ceremonies were private, and only a few intimate friends were present. No cards. The handsome and intelligent young groom is a native of Baton Rouge, La., having graduated in medicine in 1889 from the Louisville Medical College, of Louisville, Ky., receiving a handsome gold medal for excellency in his studies, out of a competing graduating class of 106 students. He at once located at Gonzales, La., where he made friends rapidly and soon occupied a prominent place in the front ranks of his profession, as well as socially. He was an earnest, active worker for God and right in the last State campaign (Foster and anti-lottery), and was elected coroner of Ascension parish by a handsome majority over his opponent, Dr. J. S. Garver. The Doctor enjoys a large and remunerative practice in his section of country, and the confidence and esteem of all who have the pleasure of forming his acquaintance. Miss Dawson is one of Jackson's fairest and most intelligent daughters. She is a native of East Feliciana parish, a daughter of F. E. Dawson and A. A. Simmons, her father being one of the leading architects of his parish. Miss Dawson is a typical brunette, tall and graceful in figure, with a large, dreamy eye, that always portrays the loveliness of her nature. This couple seems peculiarly fit to make life's journey together a pleasant one. After their marriage the gallant groom and his lovely bride departed for their future home on New River, in Ascension, where the Doctor had previously prepared a handsome residence."

COOK, Benjamin Harvey, of Wilkinson, Ind., was born August 22, 1858, in Hancock county, Ind., was reared on a farm and attended public schools during the winter months until fifteen years old, when he entered a private school, with A. J. La Rue, Esq., as teacher, which he attended for four years successively, winter and summer. At the age of nineteen he began teaching in common schools, continued until twenty-three years of age, when he began the study of medicine with B. Lundy Fussell, M. D., a graduate of Jefferson Medical College, of Philadelphia, Pa., at Markleville, Ind. His medical studies were prosecuted at the Medical College of Indiana, receiving the degree of M. D., February 26, 1885. He remained with his preceptor, Dr. Fussell, at Markleville, Ind., for one year, engaged in general practice; on April 1, 1886, he located at Wilkinson, Hancock county, Ind., and soon established a lucrative practice. Within one month from his location he was called in council with two of his pioneer brothers in the profession, where he successfully restored a completely lacerated perineum. This, his "maiden" operation, has brought him many others, which have redounded to his credit. His special liking is for surgery, in which he has performed many capital operations, having removed the left breast of a woman March 3, 1897, in thirteen minutes, including the applications of dressings, which operation was for scirrhus cancer. January 30, 1889, he was married to Miss Laura E. Cooper. Of this union four sons have blessed their happy home—Theophilus Parvin, Harvey

Weir, Robley Dungleinson Myrle and Herial Paul. He is ex-president of Hancock County Medical Society, member of Indiana State Medical Society, member of American Medical Association, and is a member of three fraternal societies, I. O. O. F., K. of P. and Masonic, and has received the Blue, Chapter, Council and Templar degrees. He is public spirited, no opportunity passing him in which he might benefit his community or city without his taking advantage of it. Dr. Cook is medical examiner for the following life insurance companies: Fidelity, of Philadelphia; Union Central, of Cincinnati; John Hancock, of Boston; Illinois State, of Chicago; Merchants' and Bankers', of Chicago; I. O. O. F. Mutual, Masonic Mutual and Uniform Rank, Knights of Pythias, and

*Benjamin Harvey Cook.*

surgeon of the Peoria & Eastern Railway Company.

COLEMAN, Thomas Davies, of Augusta, Ga., son of Dr. John Scott and Carolina Wyatt (Starke) Coleman, grandson of William Wyatt Starke, was born January 13, 1865, at Augusta, Ga. His literary education was obtained at Richmond Academy, Augusta, Ga., and at the Kentucky University, Lexington, A. B., in 1885. He began to read medicine in the summer of the same year, in his father's office; attended lectures at the Johns Hopkins University, Baltimore, in 1886-87 and 1887-88; also a two years' course at the University Medical College, New York city, receiving the degree of M. D. from the latter institution in April, 1890. He took a special course of instruction in physical diagnosis in Bellevue Hospital, New York city, under Professor Alfred L. Loomis, in 1889. Dr. Coleman has been a practitioner of medicine at Augusta since June, 1890. He is a member of the Medical Association of the State of Georgia, and in April, 1891, read before that association a paper on "Pulmonary Phthisis," which was published in its transactions and in the *Southern Medical Record*; a fellow of the American Climatological Associa-

tion; and a member of Association of American Physicians and Surgeons. He is an attending physician and pathologist of the Augusta City Hospital; and a contributor to the *American System of Medicine*, edited by Dr. Alfred L. Loomis and Dr. W. Gilman Thompson. Dr. Coleman was assistant in physiology, Johns Hopkins University, 1887-88, and occupied the same position in the University of the City of New York, 1889-90. He has been Professor of Physiology and Pathology in the Medical Department, University of Georgia, since 1892, and Secretary of the Faculty since 1893; and a member of the Board of Health of Augusta since 1890. Married, in June, 1890, Miss Annie Lee Adams, of Lexington, Ky. They have three children—Sarah Starke Coleman, Owen

J. M. DaCosta, at his private school, or "institute," for clinical instruction in physical diagnosis. During the summer of 1864, and while a student at the university, he served as surgical assistant in the Peninsular Campaign of General Grant, under orders from Surgeon-General King, director of the Pennsylvania Medical Reserve Corps. After graduating in March, 1865, he devoted a year to travel, to clinical study, and to hospital and dispensary practice at Philadelphia. In 1866 he commenced the private practice of his profession at Maysville. He has taken an active interest in public affairs, and has contributed to the press articles upon varied topics—education, hygiene, medical legislation, sanitary improvement, industrial progress and municipal reform. He has held various public offices, such as city physician, chairman city board of health, member of the city council, member of the county board of health, member of the board of education and trustee of the public library fund. From 1874 to 1882 he was a member of a board of medical examiners for the State, Fourteenth Judicial District. He received an appointment as United States Examining Surgeon in 1884, and has served under three administrations in that capacity, resigning in 1894 to go abroad. Dr. Pickett is a Fellow of the American Academy of Medicine; member of the American Ethnological Society; American Statistical Society; American Association for the Advancement of Science; and life member of the British Association for the Advancement of Science. He was elected one of the Vice-Presidents of the American Anthropological Association, which was organized at Philadelphia during the Centennial year, and which has since merged in the Anthropological Section of the American Association for the Advancement of Science. He was a member of the International Congress of Anthropology, which met at Paris, France, in 1889, and was in attendance, as a member, at the Newcastle meeting of the British Association in September of the same year. He also attended the Oxford meeting of the British Association in the summer of 1894. Dr. Pickett has published papers upon a variety of subjects: "Tepeu: The Hypothetical Migrations of Morbus Americanus," London, 1889; "The Testimony of the Mounds," communicated to the Anthropological Institute of New York, 1871, and published in Collins's History of Kentucky in 1874; "The Suppression of Empiricism by Statutory Law," 1886; "The Genesis of a Pioneer Commonwealth," 1885; "The Vaginal Tampon in Placenta Prævia," *College and Clinical Record*, Philadelphia; "A Biographical Sketch of Dr. John Poage Campbell," "Perrin's History of Kentucky," Chicago, 1888; "A Biographical Sketch of William Henry Wadsworth, contributed to "The Lawyers and Lawmakers of Kentucky," Chicago, 1897; "A Sketch of the American Ethnological Society;" "Concerning Certain Cases of Yellow Fever in the Epidemic of 1878," and Dr. T. C. Minor's Health Report, Cincinnati, 1878. Dr. Pickett was one of the special contributors to Dr. Collins's voluminous History of Kentucky, published at Covington, Ky., in 1874. He is a member of the Filson Club, Kentucky, and of the Historical Society of Virginia. In 1873 Dr. Pickett married Miss Abby, eldest daughter of Hamilton Gray, of Kentucky. They have two daughters—Rosa G. and Margaret A. Pickett.

*Thomas Davies Coleman.*

Adams Coleman and Martha McEwen Coleman.

PICKETT, Thomas Edward, of Maysville, Ky., son of Thomas J. and Margaret (Madison) Pickett, grandson of Colonel John Pickett, a native of Fauquier county, Virginia, was born January 11, 1841, near Maysville, Ky. He received his early education at the Maysville Seminary; entered Centre College in 1856, and was graduated in 1860; began the study of medicine with Dr. John Marshall Duke, of Kentucky, in 1861; became an office student of Dr. Cheslow Morris and Dr. H. L. Hodge, of Philadelphia, in 1862, and matriculated at the University of Pennsylvania, Department of Medicine, in the autumn of the same year, and took the regular winter, spring and summer courses, attending the Blockley and Pennsylvania Hospital clinics during the spring and summer months. Two years of the course were devoted to study under Dr. D. Hayes Agnew, in his famous school of anatomy, and under Dr.

HOFF, Josiah W., of Pomeroy, Ohio, only son of Cornelius and Jane (White) Hoff, grand-

*J. W. Hoff*

son of Anthony Hoff, and great-grandson of John Hoff, of Trenton, N. J., was born December 10, 1822, in Harrison county, Virginia. He received a preliminary education at Rector College, Virginia, and commenced the study of medicine in 1843, at Puntytown, Va., under Drs. William Eyster and Joseph Carr, and took one course of medical lectures, 1845-46, at Jefferson Medical College, Philadelphia. Dr. Hoff commenced the practice of medicine May 1, 1846, at Ripley, Jackson county, Virginia, and after one year there, was one year at Ravenswood, and thirteen years in Elizabeth, Wirt county, Virginia. He practiced in Racine, Ohio, from 1861 to 1871, and in Pomeroy since the latter date. Dr. Hoff is a member of the Meigs County Medical Society, Ohio Valley Medical Society, Ohio State Medical Society, American Medical Association and of the International Medical Congress. He was President of the Board of Health of Pomeroy in 1872-73, and is now President of the Board of Pension Examining Surgeons at Pomeroy. He was also a member and president of said board under President Cleveland's first administration, and was Magistrate and Clerk of the Superior Court, in Wirt county, Virginia, prior to 1861. Dr. Hoff is the author of "Blood-letting as a Therapeutic Remedy" and many unpublished reports and essays. When he first settled in the Ohio valley in the practice of medicine, there was not a railroad nor a telegraph line west of the Alleghany mountains. Married, December 17, 1846, Miss Sara A. Hopkins, of Parkersburg, Va. They have seven

children—Lulu M. Hoff, Florence V. Thomas, Helen M. Howell, Neville S. Hoff, D. D. S., Professor of Dentistry, University of Michigan; Josiah Frank Hoff, and Edward Redmon Hoff, D. D. S., practicing dentistry in Frankfort, Germany, and Henry Otis Hoff, of Syracuse, Ohio.

KETCHERSIDE, Enoch Blackburn, of Jerome, Arizona, born September 7, 1846, near Trenton, Ga., is the son of James and Mary (Cartwright) Ketcherside, grandson of Thomas Ketcherside, of Scotland. His father died when he was six years old, and at the age of twelve years he was attacked with the hip joint disease, which continued six years, and maimed him for life. At eighteen years he was without an education, but was then able to work, and by his own effort acquired an academical education. In September, 1869, he went to Texas, remaining there until 1875, when on account of loss of health, he was obliged to return to Georgia. There he was engaged in mercantile business six years, meanwhile commencing the study of medicine in 1876, at Rising Fawn, Ga., and was pressed into practice in 1879, before attending lectures. He closed his business as soon as possible, and matriculated at the Medical Department, University of Tennessee, Nashville, and was graduated in February, 1884. He removed from Rising Fawn to Jasper, Tenn., in February, 1883; in January, 1887, he returned to his native town, and remained there until 1895, when he removed to Jerome, Arizona. Dr. Ketcherside is a member of the Medical Society of the State of Tennessee, and of the Tri-State Medical Society of Georgia, Alabama and Ten-

*E. B. Ketcherside*

nessee. He taught school two or three sessions, and was County School Superintendent

of Dade county, Georgia, in 1880-82. Married, September 3, 1868, Miss Eliza J. Allison, of Trenton, Ga. Their children are—Willie Ida, Mollie, Jennie, Lucile; James A., M. D., Medical Department, University of Tennessee, February, 1892; Hugh V., John K., Enoch Brown, Allison Kemper, Hilary Dunham and Paul Jenner Ketcherside.

BARTLETT, Aurelius T., of Virden, Ill., son of Joseph Waterman and Mary (Twombly) Bartlett, grandson of William Bartlett, was born December 4, 1830, at Searsmont, Me. His preparatory education was obtained in the common schools of Ohio, supplemented by a course in Temperance Hall Academy, Jerseyville, Ill. He taught school for a time in each of the above named States, and commenced the study of medicine in 1858, at Jerseyville, under Joseph

of service August 10, 1865, having been reported "present for duty" with regiment every day, although as senior medical officer of his brigade he frequently did brigade and division work. In October, 1865, Dr. Bartlett located in the private practice of medicine at Virden. He is local surgeon of the J. S. E. R. R., ex-president of Macoupin County Medical Society, member of Capital District Medical Society, District Medical Society of Central Illinois, Illinois Army and Navy Medical Association, life member of the Illinois State Medical Society, ex-member of the American Medical Association and of the National Association of Railway Surgeons. While associated with the Thirty-third Missouri infantry he was appointed surgeon-in-chief of the district of eastern Arkansas, and later was made a member of the Board of Operators for the First division, Sixteenth army corps, and was actively employed as such in several engagements in the Red River campaign, Louisiana, and at the battles of Tupelo, Nashville and Mobile, besides others of less importance. Dr. Bartlett has been engaged in a general surgical practice, military and civil, over thirty-five years, the operations including amputations, resections, tracheotomy, laparotomy, operations upon the skull and for strangulated hernia, besides gynecological work. He is the author of articles on surgical topics, published in the *St. Louis Medical and Surgical Journal*, 1879; a paper on "Diphtheria," in the May number, 1881, of *Gaillard's Medical Journal*, and has also presented papers at the meetings of the various medical societies of which he is a member. Dr. Bartlett is a member of Virden Lodge, A. F. and A. M., having repeatedly filled the office of W. M., and is an elder in the Presbyterian Church. Married, October 23, 1866, Miss Sue A., daughter of R. C. and Hannah Brown, of Virden. Of the three children born to them, Aurelius Willard is a graduate of Illinois College (classical course), of Marion-Sims College of Medicine; he has spent two years at the University of Berlin, during the latter part of that time serving as volunteer assistant in the department of pathological anatomy, and at present holds a like position in the University of Strassburg, Germany, but intends to return in 1898 to his alma mater, where he has been announced as lecturer on bacteriology. Their daughter, Hattie Bartlett, graduated from the Female Academy, Jacksonville, Ill., after which she became the wife of Mr. James O. Vosseller, of that city. The third child, a boy, died in infancy.

YOUNG, Charles Elisha. Office, New York City; residence, White Plains, N. Y.; son of Elisha Scott, an eminent New York City lawyer, and Sarah Johanna (Greenleaf) Young, grandson of Elisha W. Young, was born August 27, 1858, in Brooklyn, N. Y. His mother is a daughter of Rev. Jonathan Greenleaf, D. D., and niece of Hon. Simon Greenleaf, Professor of Law in Harvard University; she is also related to the poets Longfellow and Whittier. At the age of five years he was left fatherless, and the family in dependent circumstances, owing to the mismanagement of his father's valuable estate. A part of his early education was obtained in Public School No. 12, Brooklyn, and at Nyack, N. Y.; and at the age of 15 he engaged as an errand boy in New York City, at a salary of three dollars a week. In September, 1877, he entered the Massachusetts Agricultural College, Amherst, with the determination to ac-

*Aurelius T. Bartlett.*

O. Hamilton, M. D.; attended two courses of lectures at Missouri Medical College and Rush Medical College, from the latter of which he was graduated in 1862. He also attended a course of lectures in St. Louis Medical College in 1873-74, and received a diploma from that institution; also took a post-graduate course at the New York Polyclinic in the winter and spring of 1891. In 1896 Dr. Bartlett visited Europe, and during this and the following year made a tour through England, France, Switzerland, Italy, Austria and Germany, spending a considerable portion of the time at the leading hospitals of London, Paris, Vienna and Berlin. April 21, 1862, he was commissioned assistant surgeon in the Missouri State militia, in the service of the Federal army; was promoted to rank of surgeon on May 7, following; was mustered out February 15, 1863; recommissioned surgeon of the Thirty-third Missouri volunteer infantry April 15, 1863, and was mustered out

quire a professional education. Early in 1879 he commenced the study of medicine under

*Charles S. Cahoon*

the direction of Dr. Charles S. Cahoon, Lyndon street, doing chores for his board, and in March, 1880, having been awarded a scholarship, commenced his first course of lectures in the Medical Department of the University of Vermont, at Burlington. The following September he matriculated at the University of the City of New York, Medical Department, from which he was graduated March 7, 1882, and immediately entered upon the practice of medicine in that city. He was elected a "Resident Fellow" of the New York Academy of Medicine, March 1, 1888, member of the New York Physicians' Mutual Aid Association, March 13, 1888, and a member of the Medical Society of the County of New York, March 24, 1890. He was appointed on the staff of attending physicians to the Northeastern Dispensary, December 13, 1883, and also served on the staff of attending physicians to the New York Foundling Asylum during the summer of 1885. Dr. Young early became expert in the fields of obstetrics, gynecology and pediatrics, and has written articles upon "Ante-Partum Hemorrhage," "Hydatiform Pregnancy," various contributions to the subject of medical charity and other papers. He served as President of the Massachusetts Agricultural College Club of New York, December, 1893. On December 13, 1885, he was ordained to the office of Deacon

in the Central Presbyterian Church, New York City, and became secretary of the board. He removed his residence to White Plains, N. Y., in September, 1893. For some years Dr. Young has devoted his time chiefly to chronic disease, which is now his speciality. In a short published article upon the "Recognition Prognosis and Treatment of Chronic Disease" he states that chronic disease is too often overlooked while yet curable; also, that the morbid may give place to the natural under proper influences even when the case is given over as hopeless. Dr. Young's experience confirms him in the belief there should be no "school" as such, in medicine; and he believes eventually the great rivals—each containing thousands of men of highest intelligence, will throw aside their prejudices and amalgamate for the common good. Dr. Young has interested himself in the education of young men and women, several of whom owe their present success to his earlier efforts in their behalf, and to have them succeed gives him the highest satisfaction. Dr. Young is medical examiner for several life and accident insurance companies, and is also a member of the Independent Order of Odd Fellows. Dr. Young married Miss Carrie T. Dennis, of New York City, September 13, 1888. They have one child, Florence Greenleaf Young.

MEEKS, William Demarquis, of Massie's Mills, Virginia, born September 15, 1860, in Nelson county, Virginia; is the son of James William Clarkson and Elowise (Wills) Meeks, grandson of Sylvanus Meeks, who enlisted in the war of 1812 at the age of eighteen. Dr.

*Wm. D. Meeks*

Meeks was educated chiefly in the private schools of his native county until he was six-

teen years of age. He then entered the Virginia Agricultural and Mechanical College, now the Virginia Polytechnic Institute, where he was a student for over three years, the last of which was devoted principally to a special course in Latin, mathematics, natural history and chemistry, preparatory to the study of medicine. In September, 1881, he entered the College of Physicians and Surgeons at Baltimore under the preceptorship of J. W. Chambers, M. D., Professor of Anatomy and Clinical Surgery, and was graduated M. D. in the spring of 1883; also attended the post-graduate lectures at the New York Polyclinic in 1886 and 1894. He practiced medicine at Massie's Mills since June following his graduation until January, 1897, when he was appointed resident physician to Hollins' Institute, Roanoke county, Virginia, but to gratify the wishes of his aged father he resigned his position during the current year to return to his home and practice at Massie's Mills. He is a member of the Medical Society of Virginia, of the American Medical Association, and charter member of the Roanoke Medical Society, member of county board of health since its organization, medical examiner for the Equitable Life Assurance Society of the United States, and also for the Mutual Life and the New York Life Insurance Company of New York. He has been a Mason since the age of twenty-two, being Master of his lodge in 1890. He is the author of a paper on "Skin Coloring From the Continued Use of Nitrate of Silver," *Virginia Medical Monthly*, March, 1888. Married, first to Miss Rachel Henderson, daughter of William Francis Henderson, Esq., of Blackburg, Va., who died the same year, leaving no children; married the second time in 1885, Miss Minnie Dabney Clark, daughter of Edward F. Clark, of Nelson county, Virginia. They have one child, William Edward Meeks.

GÖSS, Isham Hamilton, of Athens, Ga., son of Rev. William Rabun and Elizabeth Ann (Mitchell) Goss, was born April 28, 1853, in Banks county, near Harmony Grove. His grandfather was Rev. Horatio J. Goss, of Elbert county, Georgia. Dr. Goss completed his literary education at eighteen years of age. In 1874 he commenced the study of medicine under Dr. W. S. R. Hardman, at the town of Monroe, in Walton county, Georgia, and from that preparation he entered the Louisville Medical College in October of the same year. In March of the next year he entered the second course of lectures at the Kentucky School of Medicine, Louisville, where he was graduated with honors in June, 1875. The Louisville Medical College in 1876 conferred upon Dr. Goss the *ad eundem* degree, which degree was also conferred upon him by the Atlanta (Georgia) Medical College in 1889. At the age of twenty-one he entered upon the practice of his profession at Fort Lamar, in Madison county, Georgia. During his residence at that place he twice returned to the institutes to further prosecute his studies. In October, 1879, he entered the College of Physicians and Surgeons in the city of New York (medical department of Columbia College), where he remained until March, 1880. While here his regular instructors were Dr. Alonzo Clarke, Dr. T. Gaillard Thomas, Dr. Francis Delafield, Dr. H. B. Sands, Dr. T. M. Markoe, Dr. F. N. Otis, with special instructions from Dr. Austin Flint and Dr. Alfred L. Loomis, on diseases of the heart and lungs, and from Dr. Lewis A. Sayre

on orthopedic surgery. During this time he also received special instruction on the eye and ear from Drs. Mittendorf and Knapp. Returning to Fort Lamar in March, 1880, Dr. Goss continued in active practice until September, 1889, when he went back to New York and took a three-months' course in the Post-Graduate Medical School and Hospital, of New York. During this period he took a special course under Dr. Roosa, at the Manhattan Eye and Ear Hospital, and on rectal diseases under Dr. Kelsey; also a course at the New York Polyclinic on general surgery and diseases of women. Dr. Goss was graduated from the Loomis Laboratory in December, 1889. In January, 1890, Dr. Goss removed to Athens, Ga., where he has since resided and practiced his profession. In No-

*I. H. Goss*

ember, 1894, he went to New York, and took a two-months' course in the Columbia University. In May, 1895, he went to Baltimore and took a four-weeks' course in the Johns Hopkins Medical School, and took special instruction under Drs. Howard A. Kelly and Wm. S. Halstead in gynecology and surgery. After this he went to Philadelphia and New York and took special work on the same lines of study, returning to Athens the last of June, where he has since resided. In 1877 he became a member of the Medical Association of Georgia at its meeting in Macon, and in 1888, at Cincinnati, his name was enrolled as a permanent member of the American Medical Association. In 1887 he was a member of the ninth International Medical Congress at Washington, D. C. In 1893 he was a member of the Pan-American Medical Congress in the same city, and was appointed by the governor of Georgia one of the delegates to the Sanitary

Congress, which met at the same time. He was also a member of the second Pan-American Congress, which met in the City of Mexico in November, 1896; he is also a member of the Mississippi Valley Medical Association. On July 28, 1878, Dr. Goss was married to Martha Everleila, daughter of Capt. John N. and Lettice (Ware) Montgomery, of Fort Lamar, Ga. To them four children have been born—Ralph M., infant, deceased at eleven months; Agnes, Clifton and Leila Gertrude.

PEAVLER, Geo. M., of Bristol, Tenn., was born at Bloomingdale, Sullivan county, Tenn., October 15, 1858. His father was Henry J. Peavler, who died in 1871, when the son was twelve years of age. Left in destitute circumstances, his early life was one of struggle and

*Geo. M. Peavler*

privation. Until eighteen years of age his educational advantages were limited to the public schools, which he attended during the winter months, obtaining in this way a common school education. At the age of eighteen he entered Kingsley Seminary, where he remained as a student four years. He then went to Rotherwood, Tenn., where he became principal of a school, which position he held for several years. In 1885 he began the study of medicine in the medical department in the University of Tennessee. He was graduated at the Hospital College of Medicine, Louisville, Ky., in 1889. After graduation he located in Sullivan county, Tennessee, where he engaged in a country practice. Remaining here but a short time, he removed to Bristol, Tenn., his present location. In 1891 he took a post-graduate course at the New York Polyclinic. He now devotes himself exclusively to the treatment of diseases of the eye, ear, nose and throat. He is the author

of several instruments used in his special branch of surgery. He has given considerable study to diseases of the accessory cavities and to the surgical methods best suited for their relief. In 1892 he devised a method for the drainage and irrigation of the antrum of Highmore by means of a self-retaining silver tube. Among his contributions to medical literature are found the following papers: "Hereditary Syphilis," "The Abuse of Antipyretics," Transactions of Tennessee State Medical Society, 1897; "Errors of Refraction and Their Relation to Asthenopia, Headache and Other Reflex Neurosis," Transactions of Tennessee Medical Society, 1891; "Mastoid Complication in Middle Ear Disease," *Charlotte Medical Journal*, 1896; "Cataract Extraction," 1897; "Empyema of the Antrum of Highmore," *International Journal of Surgery*, 1896; "Disease of the Accessory Cavities of the Nose," *Medical News*, 1896; "Foreign Bodies in the Eye," Transactions of East Tennessee Medical Society, 1893. He is a member of the Bristol Medical Society, of the East Tennessee Medical Association, of the Tennessee State Medical Society and of the American Medical Association. He has been president of the Bristol Medical Society, and in 1894 was elected president of the East Tennessee Medical Association. In 1897 he was appointed by the government as expert pension examiner for the eye, ear, nose and throat.

POMEROY, Harlan, of Cleveland, Ohio, the youngest son of Alanson and Kezia (Pope) Pomeroy, who occupies a conspicuous position among the Cleveland physicians, was born at Strongsville, Cuyahoga county, Ohio, June 27, 1853. He now owns the old homestead at Strongsville. It is occupied by himself and family as a summer residence. Upon reaching proper age he attended the district school at Strongsville Center for several years; and for three or four years prior to his departure for college, considerable of his time, when not in school, was spent in clerking at his father's store in his native village, and in working on his father's farm. In the spring of 1870 he entered Oberlin College, remaining there for a period of five years. During the winter of 1873-74 he was engaged in teaching district school at Columbia, Lorain county, Ohio. Subsequently he commenced the study of medicine in the office of Dr. C. F. Cushing, of Elyria, Ohio, and afterwards attended the Cleveland Homeopathic Hospital College, from which he was graduated with the degree of M. D., in 1879 receiving the "Diploma of Honor" for having attained the highest scholarship in the class. After having served during the summer as house physician to the Protestant Hospital at Toledo, Ohio, he went to New York City and took a post-graduate course at Bellevue Hospital College, and attended clinics at the various hospitals during the winter. Returning to Cleveland in 1880 he commenced the practice of his profession, opening an office at 161 St. Clair street, and accepted the position tendered to him of attending physician to the Good Samaritan Dispensary, which position he held for two years. December 21, 1880, he was married to Miss Frances L. Pomeroy, of Elyria, Ohio. In 1881 he opened an office at 154 Public Square. Here he remained until 1883, when he purchased a lot and had the building erected at 526 Prospect street. This was used as residence and office until 1894, when he purchased his present residence at 116 Ingleside avenue,

still retaining his office at 526 Prospect street. Actively engaged in the general practice of medicine and surgery, the subject of medicine has always been more congenial to him than that of surgery, hence it is especially in the capacity of family physician and obstetrician that he is well and favorably known. October 1, 1886, he entered into partnership with Dr. D. H. Beckwith, since which time they have been practicing together under the firm name of Beckwith & Pomeroy. From 1881 to 1884 he was lecturer on *Materia Medica* at the Cleveland Homeopathic Hospital College, and in the latter year accepted the Professorship of Physiology, Hygiene and Sanitary Science, thus becoming a member of the Faculty of the college. This chair he held until 1891, when he accepted the Chair of Obstetrics. He now occupies the

*Hailan Pomeroy*

Chair of Obstetrics in the Cleveland Homeopathic Medical College. This college was formed (in 1897) by the union of the Cleveland University of Medicine and Surgery, formerly the Cleveland Homeopathic Hospital College and the Cleveland Medical College. He is treasurer and member of the executive staff of the amalgamated institution. He was one of the founders of Maternity Home (in 1892), its first attending physician, and has been a member of the staff since that time. He has been secretary of the Cleveland Homeopathic Hospital Society continuously since 1880. He is a member of the American Institute of Homeopathy, having likewise been a member of the Bureaus of Physiology, Sanitary Science and Obstetrics in this association. He is one of the members who constituted the Intercollegiate Committee, taking a deep interest in the means advocated, favoring a higher standard of medical education. He is one of the prominent

members of the Ohio State Homeopathic Medical Society, having been chairman of the Physiological and Obstetrical sections. For several years (from 1887 to 1890) he was treasurer of the society. He was for a time secretary of the Cuyahoga County Academy of Medicine and Surgery, and a member of the Medical Round Table Club. He was for ten years (1885 to 1894) attending physician to the Dorcas Society "Invalids' Home," and is now and has been since its establishment in 1894 attending physician to Bethany Home for Invalid Children, located at 655 Wilson avenue. He is physician to the Actors' Fund of America, receiving the appointment in October, 1888, representing Cleveland in that worthy enterprise. He was president of the medical staff of the Huron Street (Homeopathic) Hospital, of which board he has been an active member since 1880, serving as its secretary for seven years. Dr. Pomeroy is an occasional contributor to medical literature. His brochure on "The Relation of Physician and Obstetric Nurse" is thoroughly appreciated. Aside from his contributions to various journals and State and national societies, he is one of the staff of contributors to the "System of Medicine," a large and the standard work on Homeopathic practice. His lecture on Medical Electricity was published by request of Hahnemann Society, before which body it was delivered, and received with marked approval. Dr. Pomeroy is one of the examining physicians for the Northwestern Mutual Life Insurance Company, to which position he was appointed in 1885. He is a member of Plymouth (Congregational) Church, and of Oriental Commandery K. T. In 1890, with his wife and son, Lawrence, he spent several months in an extended trip through Europe, where the doctor devoted considerable time to the various hospitals and clinics. Dr. Pomeroy is Dean (having been appointed in 1894) of the Training School for Nurses, connected with the Homeopathic Hospital, having been a member of the Faculty since the establishment of the school in 1884.

CURRIER, David Morrison, of Newport, N. H., son of David and Rhoda (Morse) Currier, was born at Grafton, N. H., September 15, 1840. His early life was spent upon his father's farm, while his education was obtained in the district school and at the New Hampshire Conference Seminary. At the age of fifteen he began to teach in the district schools during the winter sessions, and depended largely upon this occupation to pursue his studies. At the age of twenty-three he obtained a situation in the McLean Insane Asylum, Somerville, Mass., where he remained nearly two years, and commenced the study of medicine under its able superintendent, John E. Tyler, M. D. Upon leaving the asylum, in 1865, he went to Hanover, N. H., and became the private student of Profs. Dixi and A. B. Crosby, and was graduated from Dartmouth Medical College May 7, 1867. Since that time he has taken post-graduate courses in Boston and New York. Dr. Currier practiced medicine during the year following his graduation in Sutton, N. H., two years and a half in Sunapee, N. H., and since 1871 in Newport. He is a member of the American Public Health Association, Medico-Legal Society of New York, New Hampshire Medical Society, Center District Medical Society, president in 1886; has been a member of the board of health of Newport since 1892, has been United States exam-

ing surgeon for pensions since 1875, a member of the board of education of Newport from

*D. Merrick*

1884-86, inclusive; in Capitular Masonry is past high priest, and is past grand chancellor of the Knights of Pythias. Married, in 1868, Miss Jennie B., daughter of Johnson Colby, of Sutton, N. H.; she died September 27, 1879. He married, second, December 29, 1881, Miss Annie Miriam, daughter of Eleazer C. Converse, of Newport, N. H. Their children are Helen Miriam and Josephine B. Currier.

**NORTH**, Nelson Luther, of Brooklyn, N. Y., son of Czar P. and Epeline (Holcomb) North, grandson of Guy North, was born April 20, 1830, at Elba, N. Y. He was educated in the common schools of his native State and at the Wilson Collegiate Institute, of Wilson, Niagara county, N. Y. He commenced the study of medicine in 1851, under Dr. William B. Gould, of Lockport, N. Y. Attended two courses of lectures at the College of Physicians and Surgeons in the city of New York, from which he was graduated March 12, 1854, and has been in continuous practice in Brooklyn since graduating, with the exception of two years spent in Aiken, S. C., on account of ill health. He was draft surgeon for the Union army in 1863 for the third congressional district, New York, surgeon of the metropolitan police, 1860-69. Dr. North is a member of the American Medical Association, New York State Medical Association, New York Academy of Medicine, Kings County Medical Association and of the Kings County Medical Society. He is at present consulting surgeon to the Methodist Episcopal Hospital, and attending physician to the Brooklyn Methodist Home for the

Aged. One of Dr. North's first published papers was an article on the "Use of Sulphuric Acid in Cholera and Allied Diseases," *Buffalo Medical Journal*, 1855. It was then largely quoted, and is of renewed interest now since late scientific research has shown that the acid is destructive to the comma bacillus. Dr. North also published in pamphlet form a complete *résumé* of cholera, its cause, prevention and treatment, 1865, the paper having been previously read before the Brooklyn E. D. Medical Association. He was the first to recognize and describe a "complete dislocation of the clavicle at both ends;" the article giving the description and suggesting the treatment therefor, with a case illustrating it, was first published in the *Medical Record* of New York about the year 1862, and largely copied in the medical journals of America, England and France, and was given first place in an authoritative work in the book on "Fractures and Dislocations," by Dr. Frank H. Hamilton, of New York. He was among the first to advocate publicly the isolating and quarantining of scarlet fever and allied diseases, in an article in the *New York Medical Record* about the year 1867, and also in a paper entitled "Prophylactics in Zymotic Diseases," read before the American Medical Association at its meeting in New Orleans, and published in the *Transactions* in 1869. In 1888 Dr. North reduced a dislocation of the inferior maxilla after it had remained unreduced for eighty days, and his paper giving a *résumé* of the subject of similar reductions was published in the *Annals of Surgery*, in September, 1888. In August of the same year he published a paper in *Gaillard's Medical Journal* on "Surgical Aid in the Treatment of Pulmonary

*Nelson Luther North.*

Disease," which had been read before the Fifth District Branch of the New York State Medical

Association. He also read a paper on the general subject of tuberculosis, its pathology, prevention and treatment, before the Kings County Medical Association, which was published in the *Brooklyn Medical Journal*, December, 1890, and January, 1891, and he is the author of a short paper on the "Use of Lactic Acid Locally Applied in the Treatment of Cancerous Ulcers," read before the New York State Medical Association, 1893. In October, 1896, Dr. North read a paper before the New York State Medical Association on "Functionless Organs; Are There Any? The Use and Disease of the Appendix Vermiformis," in which he ridiculed the idea of "rudimentary" and "functionless" organs or "useless parts," fit only to be lopped off by the surgeon's knife, and suggested that the appendix vermiformis might be of use as an automatic closer, or draw string, to the ileocecal valve, and advocated a return to the medical treatment of appendicitis, particularly in the early stages, and deprecated the undue fear of medical men in the use of opium and other antiphlogistic remedies lest they be criticised by the surgeons. He thought that, while surgery had done much to alleviate danger in the disease, that medicine had failed to do her part in preventing minor enteric attacks from becoming serious and suppurative, and fit only for what should be a dernier ressort, the surgeon's knife. He indirectly advocated a halt in the mad rush of the new remedies and new methods, especially where old and tried means had proved successful. The paper was published in the *Transactions of the Association*, volume for 1896. In October, 1897, Dr. North read a paper before the New York State Medical Association on "The Status of Medicine," reviewing, in part, pathological theories, including the germ theory of disease and the practical results therefrom, suggesting a concentration of the thought thereupon, and a codifying of the results attained, that the practice among physicians should be more definite and effective. Dr. North has always been a frequent contributor to the *Daily Journal of New York and Brooklyn*, and so has helped to mold opinions politically and socially, having been fearless in the advocacy of the right as he saw it. Recently he has been before the public as a moral story writer, having written temperance, religious and historical stories, with titles as follows: "A Physician's Story," "Wesley James," "A Legend of the Lakes," "Poor Ben Ross," and other articles of fiction. Married, June 20, 1856, Mrs. Susannah Brown, daughter of Philo Kennedy, of Brooklyn, N. Y. They have three children living—Jeremiah A., Albrotta S. and Nelson L. North, Jr., M. D., the latter a specialist in diseases of the eye and ear in Brooklyn, N. Y. A son of promise, Willard North, died in 1871.

FENNO, Henry Marshall, of Rochester, N. Y., son of Stephen and Elizabeth (Sanborn) Fenno, was born March 5, 1851, at Cambridge, Mass. He was educated in the grammar and high schools of Somerville, Mass., and at A. D. Bill's Commercial College, Boston, Mass.; commenced the study of medicine in 1870, at Somerville, under Walter M. Wilson, M. D.; attended two courses of lectures at the Medical School of Harvard University, Boston, Oliver Wendell Holmes, M. D., Professor of Anatomy, but was not able to complete the course, on account of financial reverses. He then went west, and after a short course of study at the Physio-

Electro Medical College of Ohio at Cincinnati, Ohio, was graduated in 1877. He also took a course in anatomy in 1878-79, with special reference to the action of the muscles in fractures and dislocations, at the School of Anatomy, conducted by the late Dr. William F. Sheehan, of Rochester, N. Y. He was associated with Dr. Sheehan in office practice, and assisted in his clinics. Dr. Fenno has been a practitioner at Rochester since 1877. He is a member of the Rochester Pathological Society, of the Monroe County (N. Y.) Medical Society, of the New York State Medical Association, of the American Medical Association, and American Public Health Association, of the Masonic fraternity, Blue lodge, chapter and consistory, thirty-second degree, and of the Independent Order of Foresters. He is a York Rite and Scottish Rite Mason, attaining the thirty-

*Henry Marshall Fenno.*

second degree in 1881. Dr. Fenno has always taken an interest in physical culture, and since the age of ten years has attended gymnasiums, with instruction in fencing and sparring. In 1878 he organized the Rochester Athletic Club, and later the Rochester Fencing Club, and has many private pupils of both sexes; also, instructor in Rochester School of Arms. He has a complete private gymnasium and fencing room in his residence, equipped with single sticks, rapiers, foils, broad-swords and sabres. To medical literature he has contributed papers on "Spina Bifida," "Endometritis: New Method of Treatment," "Importance of Physical Culture," and has in preparation a work on "Diseases of Women and Children." Dr. Fenno was city physician of Rochester in 1879-81, in 1881-82, and also in 1884-85. Unmarried.

SLACK, Henry Richmond, Jr., of La Grange, Ga., son of Henry Richmond and Louisiana (Woolfolk) Slack, grandson of Eliphalet and

Abigail (Cutter) Slack, of New England, was born May 7, 1862, in Iberville Parish, La. He received his preliminary education under private tutors and from his father, who was a graduate of Yale, class of 1855. He graduated Ph. G., from the Maryland College of Pharmacy, in 1885, and was for ten years a druggist, and the knowledge of medicine and therapeutics so gained was of great advantage to him later. He commenced the study of medicine in 1886, and attended the medical lectures at the University of Maryland School of Medicine, at the Kentucky School of Medicine, and at Atlanta Medical College, and was graduated from the latter institution in March, 1891. He took a post-graduate course in chemistry at the Johns Hopkins University, in 1886, and received the Ph. M. degree from the Maryland

Henry R. Slack

College of Pharmacy, *honoris causa*, in 1892. In the winter of 1895-96 he returned to the Johns Hopkins University, entered the medical school and spent four months in the hospital studying under Drs. Osler, Welch and Theobald, and then visited the hospitals of New York and Philadelphia. He commenced the private practice of medicine at La Grange in 1892, and, although he confines himself to office and consultation work, has built up a splendid practice. Dr. Slack is a member of the American Medical Association, Medical Association of Georgia, American Pharmaceutical Association, ex-secretary and ex-president of the Georgia Pharmaceutical Association, secretary and examiner in chemistry for the Georgia State Board of Pharmacy, which position he has held for ten years, being at the time of his appointment the youngest secretary in the United States. He is a specialist in analytical

chemistry, medico and chemico legal work and diseases of the eye, ear, nose, throat and stomach. He is a frequent contributor to the medical press. His principal articles are "Prescription Writing and Pharmacy as Practiced in Our Large Hospitals and Dispensaries," read at Atlanta meeting American Medical Association, *Journal American Medical Association*, July 18, 1896; "Blue Pyoktanin in the Treatment of Inoperable Malignant Growths," *ibid.*, July 26, 1897, read before the Georgia Medical Association; "Useful Medication in Typhoid Fever," *Atlanta Medical and Surgical Journal*, November, 1896; "Diphtheria Antitoxin," with report of cases, *ibid.*, November, 1897. The doctor is chairman of the Sanitary Committee of the city of La Grange. He is an associate editor of the *Atlanta Medical and Surgical Journal*; a Royal Arch Mason and a Knight of Pythias. He has been Professor of Natural Sciences since 1886, and of Physiology since 1892, at the Southern Female College, La Grange, Ga. He drew up the law against adulterated drugs and chemicals for the State of Georgia. He was the author of a prize essay on chemistry, in 1885; a prize paper on syrup hydriodic acid, 1887, published in the proceedings of the Georgia Pharmaceutical Association. He also presented formulas for the United States Pharmacopoeia, 1890, a number of which were adopted by the committee on revision. Dr. Slack married in 1887, Miss Ruth, daughter of Dr. T. S. Bradfield, who comes from a family of physicians and druggists. They have three children, Henry R., Jr., Searcy B. and Ruth Slack.

MARBLE, John Oliver, of Worcester, Mass., son of John and Emeline (Prescott) Marble, grandson of Rev. Coker Marble, was born April 26, 1839, at Vassalboro, Me. He prepared for college at Vassalboro Academy, Oak Grove Seminary, Vassalboro, and Waterville Academy; was graduated A. B. from Colby University in 1863, and received the degree of A. M. from that institution in 1866. He commenced the study of medicine in 1865, at the University of Georgetown, Medical Department, Washington, D. C., under the preceptorship of Professor Thomas Antisell and Professor Noble Young. After three full courses of lectures at this institution, he was graduated M. D. in 1868. Dr. Marble commenced the practice of medicine at Worcester, Mass., in 1870, but took one full course of lectures during that year at the College of Physicians and Surgeons in the city of New York; also spent five months of the year 1880 in the hospitals of Europe; visited Bermuda in 1887, and Nassau and Cuba in 1890, in order to study those places as health resorts. Dr. Marble is a Fellow of the Massachusetts Medical Society, a member of its council since 1885; is a member of the Worcester District Medical Society, of the American Academy of Medicine, of the Worcester Club, of the Worcester Natural History Society, and of the Worcester Continentals, surgeon since 1884. In January, 1884, he was elected a director of the Worcester Free Public Library for a second term of six years; a vice-president and director of the Massachusetts Cremation Society, and one of the consulting physicians to the Worcester City Hospital, having been physician to that institution for the preceding nineteen years. Dr. Marble has written on "Cremation in Its Sanitary Aspects," published by the Massachusetts Medical Society and by the

Cremation Society in 1885; "A Voyage to the Tropics," *Worcester Light*, April 5, 1890; and

*A. P. Marble*

"Fashion in Medicine, or the Worship of the New." Dr. Marble has for many years been prominent in life insurance circles as an examiner for six of the most successful companies in the country. He recently delivered an address before the Life Underwriters' Association at Boston, claiming a greater dignity and importance for the medical department of insurance. This address was published, highly applauded, and has won for him an advanced position among the life insurance examiners of the country. Dr. Marble has retired from the active practice of medicine, except in consultations, and devotes the most of his time to literary pursuits, to travel, and to the management of his property, which consists largely in real estate in Worcester. Married, in 1873, Miss Helen Murray Allen, at Worcester, Mass. Their children are, Allen, born in 1875; Prescott, born in 1879; and Murray, born in 1885. Dr. A. P. Marble, prominent among the educators of the United States, for a term president of the National Educational Association, for twenty-five years Superintendent of Schools of Worcester, and now Superintendent of Instruction at Omaha, Neb., is a brother of the subject of this sketch.

HARRIS, E. Elliott, of New York City, son of Benjamin and Mary (Keeley) Harris, was born September 1, 1856, in New York City. His father was a retired merchant, and his mother was the daughter of an English clergyman. After a preparatory course of study in the University of the City of New York, he matriculated in the Medical Department of that institution,

under the preceptorship of Dr. John A. Wyeth and J. Harvey Dew, in 1873, and received his degree therefrom February 1, 1880, and a gold medal for excellence in physiology and special mention in surgery. His post-graduate studies include courses in surgery in Bellevue Hospital and diseases of children in the New York Hospital; in diseases of the heart and lungs, diseases of women and venereal diseases, in Bellevue Hospital; in diseases of the nose and throat and nervous diseases, in the Northeastern Dispensary; and in diseases of women, university clinic, and diseases of the eye in the New York Eye and Ear Infirmary. Dr. Harris is a member of the New York County Medical Association, of the West End Medical Society, of the New York Physicians' Mutual Aid Association, of the International Medical Congress (having attended the Berlin meeting in 1890), of the New York Pathological Society, and was deputy grand commander of the Legion of Honor, State of New York, 1883-86. The Doctor is also a member of the New York Medical Society, a life member of the New York Medical League, a member of the New York State Medical Association, American Medical Association, American Congress of Physicians and Surgeons and the Medico-Legal Society, and has been appointed examiner in lunacy by Judge Roger A. Pryor, of the Supreme Court of the State of New York. He was Professor of Physiology and Hygiene in Rutgers College, New York, 1881-85; assistant to the chair of Physiology and Histology, 1881-83; instructor in the Laboratory of Biology and Pathology, 1882-84, and attending surgeon to the clinic for diseases of women, 1886, all in the Medical Department of the University of the City of New York, and inspector of contagious diseases, New York

*E. Elliott Harris.*

board of health, 1882-86. Before going to Europe in 1890, Dr. Harris resigned from twenty

public institutions in order to give all his time to private practice. On his return he established, in 1892, a private surgical hospital in New York City, with floors, ceilings and walls of hard, white enamel, and there devotes his entire attention to the medical and surgical diseases of women and abdominal surgery. In 1888 he invented the obstetric aid for women in labor, the return-flow vaginal douche in 1889, and an irrigating pad in 1887. He has written articles upon "Artificial Infant Feeding," "The Effects of Injuries to the Mother During Labor, and Their Prevention and Treatment," "Ovary and Graafian Follicle," "Puerperal Septicemia," "Menstruation and the Menopause," and lectures on physiology and hygiene. Married, in 1886, Miss Florence Huntington, of Rochester, N. Y. Their children are Florence and Huntington Harris.

*William Pitt Brechin.*

BRECHIN, William Pitt, of Boston, Mass., son of Perez Martin and Harriett (Harrington) Brechin, grandson of James Brechin, and great grandson of James, was born at Cornwallis, N. S., March 11, 1851. He attended the Upper Canard High School, and in 1868, at the age of seventeen, commenced the study of medicine, with Drs. Jonathan and Frederick W. Borden, in his native town. He attended two full courses, and one special course at Harvard University, Medical School, from which he was graduated June 26, 1872, and has practiced his profession in Boston, Mass., since that date. In 1874 he crossed to the old country and visited all the interesting points in the Azore Islands, etc., then returned and resumed his practice. He is a member of the Massachusetts Medical Society, American Medical Association, to which he was a delegate from the Massachusetts Medical Society, May 8, 1888; Boston Medical Association, and of the New

England Historic-Genealogical Society. He was assistant surgeon of the Massachusetts Charitable Eye and Ear Infirmary from 1872-74, is medical examiner of the Mutual Reserve Fund Life Association of New York, and John Hancock Life Insurance Company. He is employed by the Fidelity and Casualty Company of New York to investigate all accidents in which they are interested in and around Boston, Mass.; and is justice of the peace for Suffolk county, Massachusetts. He is an honorary member of Scotia Lodge No. 28, Canning, Cornwallis, Nova Scotia, in which lodge he was made a Master Mason, and is a member of the De Molay Commandery, Knights Templar, of Boston: the Massachusetts Consistory, the Boston Lodge of Odd Fellows, Boston Encampment, Shawmut Canton, was high priest of St. Paul's Royal Arch Chapter of Boston, from December, 1889, to December, 1891; he is Past Grand Captain of the Host of the Grand Royal Arch Chapter of Massachusetts, Grand Representative of the Grand Royal Arch Chapter of Nebraska, to the Grand Chapter of Massachusetts; and is Past Master of Ceremonies in Mount Olivet Chapter of Rose Croix of Boston. He published a paper on "Death From Exhaustion Following Hemorrhage," *Boston Medical and Surgical Journal*, 1881; "Large Infants," *Medical Record*, of New York, 1893; and is the author of "The History of Kings County, N. S., and Its Early New England Families, Including the Genealogy of the Webster, Wells, Barnaby, Coldwell, Beckwith, Tupper, Morton, Strong, Belcher, and Many Other Families, Who Settled in the Land of Evangeline in the Year 1760." Married, December 25, 1884, Miss Alice Florence Edmonds, daughter of James and Eleanora Augusta (Harrington) Edmonds, who was born December 25, 1862, at New Haven, Conn.; died February 4, 1894. No children. At the March convocation of the Order of High Priesthood in 1890 he was anointed High Priest of the Order of Melchisedeck, and at the annual convocation of the Grand Royal Arch Chapter of Massachusetts, held at Masonic Temple, December 11, 1894, he was elected Grand Scribe; in which, at the regular meeting in May, Ascension Day, 1897, he was elected Grand Orator, and re-elected in May, 1898. Married, October 30, 1894, for his second wife, Bertha Honorine Hall. She was born in Lowell, Mass., October 30, 1866, only child of George O. and Mary Anna (Richardson) Hall, of Charlestown, Mass. Mr. Hall was born at Three Rivers, Canada, and Mrs. Hall at Grafton, N. H.

WYCKOFF, Richard Morris, of Brooklyn, N. Y., son of Richard Leverich and Elizabeth (Morris) Wyckoff, grandson of Abraham Wyckoff, was born February 15, 1839, in Brooklyn, N. Y. He was graduated A. B. from Amherst College in 1859, and M. D. from Bellevue Hospital Medical College in 1864, having been interne at Charity Hospital in 1863 and house surgeon to Bellevue Hospital during 1864. He was appointed acting assistant surgeon U. S. army in 1865, was assistant sanitary inspector of the metropolitan board of health, 1869; sanitary inspector of the Brooklyn Board of Health, 1873; assistant sanitary superintendent, 1874-75; visiting physician to St. Peter's Hospital, 1875; registrar of vital statistics, Brooklyn, 1878-82; secretary and deputy commissioner of health, 1882-86, and was again appointed to the position of deputy-commissioner, with the duties of

sanitary superintendent, in February, 1894, and 1896, for terms of two years under each appoint-

*R. M. Wyckoff*

ment. Dr. Wyckoff was a member of the Medical Society of the County of Kings, secretary from 1871-82, of the Medical Society of the State of New York, chairman of the publication committee, 1877; was one of the founders of the Brooklyn Pathological Society in 1870, of the New York State Medical Association in 1883, of the Kings County Medical Association in 1887, secretary from 1887-88 and a member of the executive committee in 1889, member of the Medico-Historical Society, vice-president, 1885-88. He was one of the editors of the Proceedings of the Medical Society of the County of Kings, 1876-84. He is the author of "Early Medicine in New York," Transactions of the Medical Society of the State of New York, 1876; "Medicine in Kings County in 1776," Proceedings of the Medical Society of the County of Kings, 1876; "The Adirondacks and Hay Fever," "Summer Mortality and Temperature," *idem*, 1877, 1878; contributions to Toner's governmental report on "Annals of American Medicine," 1874; "American Medical Colleges," Cyclopædia of Education, 1879; "Vital Statistics of Brooklyn, 1877, 1878, with Tables for 1879-81," 1885; "Ex-Internes of Bellevue Hospital," *New York Medical Journal*, May 18, 1889; "Sir Edwin Chadwick," *Brooklyn Medical Journal*, September, 1890; and various other articles on vital statistics, meteorology, sanitation, medical history and biography, published in the various medical journals.

LINDLEY, Walter, of Los Angeles, Cal., son of Milton and Mary A. (Banta) Lindley, grandson of David Lindley, was born at Monrovia, Ind., January 13, 1852. He was educated

at the Minneapolis (Minn.) High School, and commenced the study of medicine in 1871 at Belleville, Ind., under Dr. R. C. Moore, and took a course in 1872 at Keen's School of Anatomy, Philadelphia. He attended two courses of medical lectures at the Long Island College Hospital, Brooklyn, N. Y., from which he was graduated in 1875. In 1874 he was appointed by the Brooklyn board of health ambulance surgeon, and was also resident physician to the Eastern District (Williamsburg) Hospital up to the date of graduation, thus during the last year at the medical college carrying on his studies and filling these positions. Commenced the practice of medicine at Los Angeles, Cal., in 1875, continuing there until 1890, but meanwhile attending two terms at the New York Post-Graduate Medical School and Hospital. Dr. Lindley was one of the founders of the *Southern California Practitioner*, published in Los Angeles, and is the author of "California of the South," a climatic and balneological description of Southern California, which has passed through several editions, D. Appleton & Co., 1895; has also written several monographs. He was one of the founders and in 1880 was president of the Los Angeles Orphans' Home Society, one of the founders and in 1895 the president of the Los Angeles Humane Society, one of the founders of the College of Medicine of the University of Southern California, in 1885 was secretary of its faculty, and from 1885 to 1891 was Professor of Obstetrics, and is at present and has been for several years Professor of Gynecology in the same institution. While a resident of Los Angeles he was health officer of the city and superin-

*Walter Lindley*

tendent of the Los Angeles County Hospital. While a member of the Los Angeles city board

of education, Dr. Lindley was impressed with the necessity for a school that would care for and educate boys that could not be sufficiently provided for in the public schools, and for ten years he advocated appropriations for trades schools for this class of children. In 1889 the Legislature of California made liberal appropriations, in accordance with his suggestions. He was then appointed to establish the Whittier State School at Whittier, Los Angeles county, California, where he resided from 1890 until September, 1894, when, having demonstrated the wisdom of his theories and thoroughly established the school, he resigned his position and resumed the practice of his profession in Los Angeles. He is an active member of the National Conference of Charities and Corrections, and was for several years vice-president. President Cleveland appointed him as the Pacific Coast member of the United States Commission to the International Prison Congress that was held in Paris in 1895. He is a devoted member of the California State Medical Society, of which he was president in 1890. He is a member of the Southern California Medical Society and of its board of censors; member and in 1882 president of the Los Angeles County Medical Association, and a member of the American Medical Association. He has, at 315 West Sixth street, Los Angeles, Cal., a large private surgical hospital, and devotes himself to gynecology and abdominal surgery. In 1887 Dr. Lindley investigated a section of the Colorado desert, about 100 miles east of Los Angeles, which is several hundred feet below sea level, and wrote a description of the same which was first published in the *New York Medical Record*, and afterward translated into German and French and published in numerous scientific journals. He advocates the climate of this peculiar section as a specific in certain classes of pulmonary troubles. His residence is 1415 South Grand avenue, Los Angeles.

**MITCHELL, William Francis**, of Lancaster, Mo., born September 22, 1842, in Schuyler county, Missouri, is the son of Isaac and Sarah (Underwood) Mitchell, and grandson of Richard Mitchell, who owned and lived upon a farm near Harby, Nottingham, England. William Francis Mitchell attended the common schools of Schuyler county, Missouri; was a student at an academy conducted by Mrs. A. P. Baird, Lancaster, Mo., and at Shurtleff College, Upper Alton, Ill., 1862-63. He entered the Federal service as a private in the Missouri State militia, serving four months in the year 1864; commenced the study of medicine in 1865, with Dr. W. S. Lambert, of Lancaster, Mo.; attended two full courses of lectures, and spent the summer of 1867 in the chemical laboratory, at the Department of Medicine and Surgery of the University of Michigan, receiving the degree of M. D. therefrom March 25, 1868; also took a course at the Post-Graduate Medical School and Charity Hospital of Chicago during the autumn of 1891. Since June, 1868, Dr. Mitchell has practiced medicine continuously at Lancaster. He is a member of the Missouri State Medical Association, 1882; of the American Medical Association, 1886; of the American Public Health Association, 1892; of the Masonic fraternity; of the Ancient Order of United Workmen, medical examiner; was surgeon to the Keokuk & Western Railway, 1883-95; U. S. pension examining surgeon, 1885-95. He gives

particular attention to diseases of the eye, ear, nose and throat, and in 1895 gave a course of popular lectures on public health at Lancaster. In the spring and summer of 1897 Dr. Mitchell took a full course in the New York Post-Graduate Medical School and Hospital in the city of New York. In May, 1895, he read a paper before the State Medical Association entitled "Rational Medicine," *Medical Review*, St. Louis, Mo. In May, 1896, he read a paper before the Northeast Missouri Medical Association on "The Duties of the Medical Profession to Public Health," *Tri-State Medical Journal*, St. Louis. Before the same association, "The Use of Cold Water Baths in Infantile Diarrhoea," *Medical Review*, St. Louis. In January, 1897, a paper on "The Use of Reflected Light in the Examination of the Rectum

*William Francis Mitchell.*

and Female Genital Organs," *American Medical Association Journal*; April, 1897, "The Status of the Surgeon in the Treatment of Fractures," *The Tri-State Medical Journal* of St. Louis: November, 1897, "Maggots in the Nose," *Medical Review*, St. Louis. He is the president of the Northeast Missouri Medical Association, and has an office fully fitted to do any kind of surgical work, and does all classes of surgery. Delivered in the city of Memphis and other places a lecture on "The Great White Plague." Married, July 26, 1863, Miss Elizabeth T. Marshall, of Carrollton, Ill. Their children are Elmer L. (M. D., College of Physicians and Surgeons, Keokuk, Ia., 1894); Mary Adelaide, Corydon L. F. (deceased); E. Lillian Maude, Sarah, William Francis, Bertha, Robert J., George H., Frederick and Oliver Wendell Holmes Mitchell.

**FOX, Charles James**, of Willimantic, Conn., son of Dr. Roswell and Ann Maria (Gager) Fox, grandson of David A. Fox, was born December 21, 1854, at Wethersfield, Conn. He

was educated in the district and private schools, Hartford high school, and fitted for Yale Col-

*Charles James Fox*

lege in 1872; commenced the study of medicine in 1872, with his father, Roswell Fox, M. D., and also had special instruction in the Bellevue and Charity Hospitals prior to graduation; took three full courses of medical lectures at the Medical Department, University of the City of New York, and was graduated in February, 1876; he immediately commenced practice, as physician-in-chief at the City Hospital, Hartford, Conn., which position he filled until April, 1877, and since that time has been in practice at Willimantic, Conn. He is a member of the Windham County Medical Society, of which he is an ex-president; Connecticut State Medical Society, American Medical Association, and the International Medical Congress, member United States Examining Surgeons' Board, at Willimantic; surgeon-general Connecticut National Guard, 1886-88; member board of trade, and recently one of the board of fifteen to draft Willimantic city charter, just passed by the Legislature. He is a member of the A. F. and A. M., thirty-second degree; Odd Fellows, Knights of Pythias and Royal Arcanum, and medical examiner of the latter since its organization. In 1881-82 he represented the American Medical Association at the International Medical Congress, and is a frequent contributor to medical journals. He has always interested

himself in professional rather than political matters, and of the public honors which have frequently been tendered him, he has accepted only such as came in line of his profession. Dr. Fox is a hard worker and a thorough student in his professional and literary works, and has a very wide acquaintance with professional and public men. He is well-known as a contributor to State, National and International medical and surgical publications, and his writings have always received marked and widespread attention. He was married May 15, 1886, to Lillian, daughter of Rev. Howard Winslow; she died without children, September 17, 1887.

REGENSBURGER, Alfred Emanuel, of San Francisco, Cal., son of Dr. Joseph and Theresa (Nelkenthal) Regensburger, was born April 1, 1851, in New York City, and is unmarried. He was educated under private tutors, and in the private and public schools of New York City; also attended the Literary Department of the University of the City of New York. He commenced the study of medicine in 1869, in the city of New York, with his father, Dr. Joseph Regensburger, and Dr. Jas. L. Little; attended three courses of medical lectures at the College of Physicians and Surgeons of the city of New York, from which he was graduated in 1872. He immediately commenced the practice of medicine in his native city, remaining there about two years, and has been located in San Francisco since 1874. He is a member of the American Public Health Association, Medico-Legal Society of New York, vice-president of the San Francisco Bacteriological Society and member of the California Academy of Medicine. He was formerly one of the attending physicians

*Alfred Emanuel Regensburger.*

to the Northwestern Dispensary of New York, and to the defunct San Francisco Free Dis-

pensary in the year 1877. He is much interested in the subject of cremation, and has been a director two terms of the San Francisco Cremation Company. He has traveled extensively, and pursued post-graduate studies in France, Germany and England. He has given special attention to dermatology, and has published a number of papers in the medical journals and in the transactions of medical societies. Among the papers written by Dr. Regensburger the following may be mentioned: "Remarks on Eczema," *Transactions of the Medical Society of the State of California* for 1875-76; "A Case of Syphilitic Synovitis," *Western Lancet*, August, 1876; "Metric System in Prescriptions," *Western Lancet*, November, 1876; "Treatment of Diphtheria," *Western Lancet*, 1877; "Alcoholic Dressing of Wounds as a Prophylactic Against Erysipelas," *Western Lancet*, July, 1879; "Dermatology in San Francisco; a Few Facts and Data Concerning the Same," *Western Lancet*, April, 1880; "Cosmoline as an Excipient in Diseases of the Skin," *Western Lancet*, June, 1877; "The Electrolytic Treatment of Hirsuties," read before the California Academy of Medicine, *Occidental Medical Times*, June, 1892; "A Few Stray Histological and Bacteriological Facts Concerning Some Skin Diseases," read before the San Francisco Bacteriological Society, printed in *New York Medical Journal* July 9, 1892; "A Note on Herpes Tonsurans," *Transactions American Public Health Association*, 1892; "Report of a Case of Pemphigus Folieus," *Journal of Cutaneous and Genito-Urinary Diseases*, February, 1893; "Yard Sanitation," Fourth Sanitary Convention of California: "A Case of Luetic Gummata of the Lips," *American Journal of Dermatology and Genito-Urinary Diseases*, July, 1897. Further, it may also be stated that he was chairman of the Section on Dermatology and Syphilography at the Baltimore (Md.) 1895 meeting of the American Medical Association, where he presided over the section and delivered the chairman's address, entitled "Identity of Lupus Vulgaris and Lupus Erythematodes," *Journal of the American Medical Association*, January 18, 1896; was also a member of the first Pan-American Medical Congress (of Dermatological Section); also a member of the International Congress of Dermatology, held in London, England, in 1896. He is author of the articles on "Animal Parasitic Affections of the Skin," which are to appear in the "American Text Book of Skin and Genito-Urinary Diseases," soon to be published. The Doctor also presented a paper on the "Remuneration of Medical Experts in Courts of Law," to the American Congress of Medical Jurisprudence, Chicago, 1893; "Modern Cremation as a Means for the Disposal of the Dead," *Proceedings of Second Annual Sanitary Convention, California*, 1894. When the College of Physicians and Surgeons of San Francisco was started Dr. Regensburger was elected Professor of Dermatology in said institution. This college has the phenomenal record of having had 203 students enrolled upon its matriculation register during its first term—certainly a grand success for an institution on the Pacific coast.

HALDEMAN, Frederick D., of Ord, Neb., was born on the 2d day of October, 1859, on a farm located near West Liberty, Muscatine county, Iowa. His father, James F. Haldeman, was a native of Pennsylvania, and his mother

of Ohio. They married in 1853 and came west in 1856. The subject of our sketch received his literary education at West Liberty High School and the State University of Iowa. He became ambitious in early life to study medicine, and at the age of fifteen devoted all his spare time to the study of chemistry and comparative anatomy. He taught five terms of district school, in order that he might secure a sufficient amount of money to attend a medical college. He was successful in his desire and received his degree as a Doctor of Medicine March 22, 1882, from the Omaha Medical College. He was chosen valedictorian of his class and was awarded the "Abbott" prize for the best report of clinics held during the session. One week after graduation he located at Ord, Neb., and has enjoyed a large and lucrative practice. During the year 1885 he was married to Miss Olive Newbecker, of Ottawa, Ill. At

*Frederick D. Haldeman.*

the annual session of the Nebraska State Medical Society, held in 1882, he was elected a member, and soon afterwards became a member of the American Medical Association. He assisted in organizing the Loup Valley District Medical Society in 1886, and was its president two terms. In 1897 he received the appointment as regimental surgeon of the Second Regiment Nebraska National Guards, and served three years. He was appointed in 1888 by the State Medical Society to assist in examining candidates for graduation in the medical colleges of the State. May 13, 1891, the State Medical Society, while in annual session, recommended that he be appointed as a member of the State Board of Health. In June, 1891, he was duly elected to that position, and was chosen as secretary of the board, which position he faithfully filled until the expiration of his second term of office, January 1, 1898. The doctor was elected president of the Nebraska State Medical Society in 1896, and was an invited guest at the sixty-fifth annual meeting of the

British Medical Association held in 1897 at Montreal. He has taken post-graduate courses in Chicago and New York city. Dr. Haldeman has been an occasional contributor to medical literature, and has reported a number of interesting cases occurring in practice. He is a member of the Mt. Lebanon Commandery No. 6, Knights Templar, and High Priest of Doric Chapter No. 50, R. A. M., and is well and widely known both professionally and socially throughout his adopted State.

ADAMS, Marcellus M., of Greenfield, Ind., was born in Hancock county, Indiana, November 12, 1834. He is of Scotch-Irish descent, and from his ancestors inherited many of their sturdy qualities, which were greatly strengthened by his stern contact with the world in his boyhood and early manhood. His parents came from Scott county, Kentucky, and settled

*M. M. Adams*

in Indiana in 1826. He pursued his medical studies with Ely & Adams, at New Palestine, Ind., took his first examination at Rush Medical College and in 1885 graduated from the Medical College of Indiana. His practice in that State covers a period of almost forty years—six months at Elizabeth City, seven months at Greensboro, six years at Freeport and thirty one years at Greenfield. Soon after the beginning of the Civil War he entered the Federal army as a volunteer soldier. For one and a half years he was acting assistant surgeon at Camp Carrington, Indianapolis; he was then commissioned assistant surgeon, which position he held until the expiration of his term of service. In the summer of 1864 he was assistant surgeon in the Cumberland Hospital at Nashville, Tenn. In addition to his profession, Dr. Adams has taken much interest in archeology and paleontology. His leisure hours he has given to the study of these subjects and to collecting specimens and relics. He now has one of the largest and most valuable collections in the

State. He has never been an aspirant for political honors, yet has held a number of public positions. In 1859 he was elected a member of the town council of Greensboro, in 1861 he was appointed postmaster at Freeport and in 1873 was elected a member of the town council of Greenfield. His early life was spent on the farm, where he was employed as a day laborer. He early formed a desire to study medicine, and the earnestness of his desire helped him to overcome many of the obstacles in his way, and likewise to lighten the burdens of farm life. He was always faithful to his resolution to be a physician, saving, studying, toiling until he accomplished his purpose and soon an honored place among the members of his profession. He still retains his interest in the farm, and the knowledge gained while a farmer boy still serves him to good purpose. He is the proud owner of one of the finest small farms in Hancock county. Dr. Adams brought to his profession a rugged honesty and a kind spirit which have rendered him successful, because men believed in him and children loved him. He is devotedly attached to his profession, and holds its principles in high esteem. He puts into every case his conscience and his highest thought. His success lies in his works, not in his theories.

AUSTIN, Charles S., of Carrollton, Mo., was born in that city November 10, 1862. His parents were of Scotch-Irish descent. His father was born in Virginia, coming to Missouri in the early forties, and has been an active minister of the gospel—identified with the Methodist Episcopal Church South for upward of forty years. His mother was born in Missouri, being of Kentucky parentage. His early education was received in the private and public schools of Carrollton and Hannibal, Mo. In the fall of 1878 he entered the academic department of Central College, Fayette, Mo., where he pursued the regular course until completed, receiving at the age of twenty-one the degree of Bachelor of Arts. Shortly after graduation he began the study of medicine, first by learning the practical workings of a drug store, spending two years in this manner and becoming a registered pharmacist. He then entered upon the more active study under the preceptorship of Dr. Peter E. Austin, and shortly afterward enrolled as a student of the Missouri Medical College of St. Louis, Mo. He was graduated from the Missouri Medical College in the spring of 1887, and shortly afterward returned to his old home after an absence of several years, and there formed a partnership with his early preceptor. This partnership relation existed until 1893 when Dr. Peter E. Austin retired. Since this time he has led a busy, active and successful life, having built up an extensive and more lucrative practice than his expectations could scarcely have realized. He was married November 18, 1891, to Miss Mattie C. Martin, of Carrollton, Mo., daughter of Robert G. Martin, president of Carroll Exchange Bank. One son, Harold M. Austin, has been born to them, aged three years. In his early practice he was coroner of Carroll county for four years, and by the death of the sheriff was acting sheriff of the county for a number of weeks. In 1891 he pursued an extended course of study in the Post-Graduate School of New York, devoting some time to the hospital work as well. He has filled for a number of years positions on the city and county boards of health, was secretary and president

at different intervals of the Carroll County Medical Society. He was secretary of the Board of United States Pension Examiners at this point under the last Cleveland administration. He has been for several years surgeon with the rank of major of the Fourth Regiment Infantry M. N. G., and is a member of the State Medical Society, and the Association of Military Surgeons of the United States. He has followed the general practice, devoting more especial attention to the diseases of women and children. He has devoted considerable attention toward life insurance examinations, being the local examiner for the New York Life, New York Mutual, New York Equitable, Connecticut Mutual, Phenix, Etna, Mutual Benefit, Covenant Mutual and numerous other organizations of a similar character.

*Herbert Jones.*

JONES, Herbert Cameron, of Decatur, Macon county, Illinois, was born in the town of Athens, county of Athens, and State of Ohio, January 7, 1855. His father, J. Lindley Jones, was also a native of the same county, and his mother, whose maiden-name was Ellen Cameron, was born in Culpepper county, Virginia. Both parents are living and still reside in Athens, which is one of the oldest settlements in the State, celebrating its hundredth anniversary in 1897. The town is situated among the hills along the Hocking Valley in South-eastern Ohio. It is the site of the Ohio University, the oldest college west of the Alleghanies, founded in 1804. After attending the public schools of his native town till his fourteenth year, Dr. Jones' parents removed to Greenfield, Ohio, where he entered the high school, from which he graduated in 1871, at the age of sixteen. He pursued his studies at the Ohio University, and after leaving college began the study of medicine in the office of Drs. J. L. and W. H. Wilson, of Greenfield. At the session

of 1873-74 he attended lectures at the Medical College of Ohio (now also the Medical Department of the University of Cincinnati). Not being old enough to graduate the following year he further continued his studies in the office of Dr. R. W. Erwin, of Bay City, Mich. Returning to the Medical College of Ohio at the session of 1875-76, he graduated March 2, 1876, taking the prize in obstetrics in a class of ninety, and standing second in the examination of the diseases of women, and fourth in the diseases of the eye. After graduation he went to Florida and devoted himself to the drug business, with incidental practice until 1881, when he came to Central Illinois and formed a partnership with Dr. Harsha, now Professor of Clinical Surgery, in the College of Physicians and Surgeons, Chicago. This partnership continued three years, and during that time Dr. Jones attended the post-graduate courses at Rush Medical College in 1883. In 1887, on account of failing health of his wife he returned to Florida, locating at Winter Park, where he was appointed assistant surgeon to the South Florida Railroad, and was chosen by the *Congregationalist* of Boston to write up the history of the yellow fever epidemic which occurred in 1887-88, during his residence there. After two years in the Sunny South, his wife's health being in a great measure restored, he returned to Illinois, locating at his present home, Decatur. Here he formed a partnership with a prominent young physician which continued five years. At its termination he became associated with Dr. W. J. Chenoweth, the senior surgeon in age, rank and years of practice in Central Illinois. Dr. Jones is the local surgeon of the Vandalia Railroad, and is associated with his partner in the same relation to the Illinois Central and the Peoria, Decatur and Evansville Railways. He belongs to the State and District Medical Societies, and is a Mason up to and including Knights Templar and "Noble of the Mystic Shrine," belonging to the Medinah Temple of Chicago, and is also a Knight of Pythias. Dr. Jones and wife are members of the First Presbyterian Church, and the doctor belongs to the leading men's social organization, the Decatur Club. It is needless to add that he has an established and profitable practice and an unsullied name in this community, in which he expects to spend the remainder of his life. Dr. Jones is a general practitioner, but takes especial interest in children's diseases and obstetrics. He has practiced in Decatur eight years, a part of the time in partnership with other physicians, but is at present alone in an elegant suite of rooms in the Millikin Bank building, the finest office building in Decatur. Dr. Jones' family consists of a wife and two children, a boy of seventeen and a girl of thirteen; and their home is at 425 St. John's Place.

WAY, Joseph Howell, of Waynesville, N. C., born November 22, 1865, at Waco, Tex., is the son of Charles Burr and Martha Julia (Howell) Way, grandson of Col. John Whitehead Osgood Way, of Sumter District, S. C., whose father Joseph Way, was one of Sumter's veterans in the war for American independence. He never attended school, but received his entire preliminary education at his home under his father's instruction; commenced the study of medicine in 1882 at Asheville, N. C., under Dr. William L. Hilliard, of that place. He attended lectures at the Medical College of Virginia,

Richmond, passed the examination and was licensed to practice by the North Carolina

*J. Howell Way*

Board of Medical Examiners in August, 1885; then attended lectures at Vanderbilt University, and was graduated February 26, 1886. On March 18 following Dr. Way entered upon the practice of medicine in Waynesville, his present location. He is a member of the Medical Society of the State of North Carolina, in 1888 was chairman of its section in *Materia Medica and Therapeutics*, annual essayist in 1883, first vice-president in 1894, and was also one of its delegates to the meeting of the American Medical Association in 1892, member of the Ninth International Medical Congress, superintendent of health, Haywood county, since 1890; past master A. F. and A. M., past chancellor K. of P.; past grand regent of the Royal Arcanum in North Carolina, supervising medical examiner for the Order of Chosen Friends in the States of North Carolina, Georgia and South Carolina; member of the Sons of the American Revolution and of the Sons of Confederate Veterans. He is also past grand I. O. O. F., grand secretary Royal Arcanum of North Carolina, is surgeon-general North Carolina Division Sons of Confederate Veterans and is medical examiner for eighteen life insurance companies. Dr. Way's published papers are as follows: "Report of a Case of Poisoning from the Hypodermatic Use of Cocaine Muriate," 1887; "Value of Acetanilid in Enteric Fever," 1888; "Report of a Laparotomy for Acute Intestinal Obstruction, with Recovery," *Philadelphia Medical News*, 1888; "Ovulation without Menstruation," *Nashville Medical*

*News*, 1887; "Traumatic Sympathetic Ophthalmia," *North Carolina Medical Journal*, 1887; "A Death from Phlegmonous Tonsolitis," *New York Medical Record*, 1888; "A Plea for the More General Use of Chloroform in Non-Operative Cases of Obstetrics," 1891; "The Abuse of Ergot in Obstetric Practice," 1893; chairman's report on "Materia Medica," Transactions of the North Carolina Medical Society, 1887; "Some Practical Observations on the Nature and Treatment of Milk-Sickness," *American Journal of the Medical Sciences*, 1893; "A Clinical View of Pyelitis, with Report of a Case Successfully Treated by Incision and Drainage," *Medical News*, 1896; "Incontinence of Urine in Children," *Charlotte Medical Journal*, 1897; "Some Practical Observations on the Question of Medical Experts in the Courts by a Country Doctor," *Journal of American Medical Association*, 1898. Dr. Way is a member of the North Carolina State Board of Medical Examiners from 1897 to 1902, Examiner on Anatomy. He responded to the address of welcome in behalf of the North Carolina State Medical Society at its forty-fifth annual session in Charlotte, N. C., May 4, 1898. Also read a paper before the society entitled "Medical Experts, Some Observations from the Standpoint of the Country Doctor." Dr. Way married July 3, 1888, Miss Marietta Welch, of Waynesville, Two children, Hilda and Joseph Howell, Jr., complete their interesting and happy family.

SNOWDEN, David Harold, of Sterling, Kan., son of William and Mary (Pugh) Snowden, and grandson of Gen. John Snowden, a soldier of the Revolutionary War, was born April 25, 1840, at Fairview C. H., Va. He commenced the

*David Harold Snowden.*

study of medicine in 1856 under the care of Prof. Robly Dungleon, Sr., of Jefferson Medical

College, attended lectures at the last-named college, and was graduated in 1858. Dr. Snowden received the degrees of A. M. from Smithsonian College in 1865, Ph. D. from Philander Smith College and LL. D. from Paul Quinn College in 1890, and F. R. S. from the Royal Society of London in 1889, and is one of the few men in the United States having this distinction. He commenced the practice of medicine in 1860 at Pittsburg, Pa., remaining there until 1870, except four years' service in the Union army as a private, and later as medical purveyor in the Army of the Potomac. After the war he took a special course in gynecology, and practiced this specialty until he entered the ministry in 1870. Dr. Snowden was a student in theology, law and science in Allegheny, Pa. In 1886 he received the degree of D. D. from Wilberforce University, and LL. D. from Paul Quinn College in 1890. He has lectured extensively throughout the United States and Great Britain since 1865, his subjects covering a large range of thought. Press encomiums have given him more than a national reputation. He is a member of the Ohio, Pennsylvania and Indiana State Medical Societies, and is now a member of the bar associations of Indiana and Kansas. He was pastor of the Pilgrim Congregational Church of Little Rock, Ark.; First Congregational Church of Kokomo, Ind.; First Congregational Church of Sterling, Kan., and has just resigned the pastorate of the First Congregational Church of Nickerson, Kan., to accept a position on the board of United States examining surgeons for pensions, Interior Department, Washington, D. C., of which he has been elected president. In August, 1898, Dr. Snowden was also made assistant to the surgeon-general of Kansas National Guard, with the rank of colonel. Dr. Snowden has given some attention to local, State and national politics in the past few years, and so popular has he become in this direction that the leading Republican papers of the State are booming him for congressman-at-large in the coming campaign, and apropos to this the Kokomo, Ind., *News* says: "He has the get-there-Eli stuff in him, and is the only man in the State that can walk 'Sockless' Jerry's log." In 1875 Dr. Snowden was united in marriage with Miss Mary E. Falconer, a daughter of Hon. R. S. Falconer, of Pennsylvania. Two children have been born to them, Mary E. and David Harold.

SCHEPPEGRELL, Frederick William, of New Orleans, was born in Hanover, Germany, September 22, 1860, but at an early age settled with his parents in Charleston, S. C. Here he received a high school education, graduating with first honor, and entered the College of Charleston, from which he graduated in 1880, again receiving the first honor and delivering the valedictory. In 1881 he matriculated at the Medical College of the State of South Carolina, under the preceptorship of the late Professor R. E. Kinloch, the distinguished surgeon of South Carolina. Prior to completing his course of lectures, he accepted the position of Professor of Chemistry and Mathematics. In 1884 he received the degree of A. M. from the College of Charleston. At this time Professor Scheppegrell devoted himself to the study of physics, and in 1884 invented the "Krumostat, or Electrical Cold Indicator," and in 1886 the "Electrical Speed Indicator." He was vice-president of the Associated Charities Society,

chairman of the Board of Curators of the Elliott Society of Science and Arts, president of the Literary Society of the Young Men's Christian Association, and trustee of the Alumni Association of the College of Charleston. In 1887 Professor Scheppegrell again took up the study of medicine, and graduating in 1889, received the appointment of resident surgeon of the Charleston Hospital. 1890 he removed to New Orleans, and in 1892 received the appointment of clinical assistant, and later, of assistant surgeon to the Eye, Ear, Nose and Throat Hospital, and became the assistant to the Chair of Laryngology of the New Orleans Polyclinic. Dr. Scheppegrell has given considerable attention to the adaptation of electricity to medicine and surgery, and has introduced a number of electrical instruments and appliances. The Electrical Department of the Eye, Ear, Nose

*Dr. Scheppegrell.*

and Throat Hospital, which he planned, is one of the best equipped in the country. He invented the volt-selector and shunt, and the compound volt-selector, by means of which the Edison current may be used without the intervention of a rheostat; also, an inhaler, a continuous nasal syringe, a vapor apparatus for diseases of the ear, a mechanical saw for nasal operations, a palate retractor, a biaural otoscopic tube, an electric sterilizer for instruments, and a number of appliances for electrotherapeutics. Dr. Scheppegrell is the associate editor of the *Laryngoscope*, co-editor of the *Annals of Otology, Rhinology and Laryngology* and American Collaborator of the *Revue Internationale de Rhinologie, Otologie and Laryngologie*. In 1897 he was elected vice-president of the American Laryngological, Rhinological and Otological Society. He is a member of the New Orleans Parish Medical Society, of the Louisiana State Medical Society, of which in 1895 he was

chairman of the Section of Laryngology and Otolaryngology; of the American Electro-Therapeutic Association, and of the Société Française d'Otologie, de Laryngologie et de Rhinologie. Dr. Scheppegrell is the author of "Electricity in Diseases of the Nose, Throat and Ear," a standard work on this subject. Among his other publications are: "The Chemical Properties of the Electric Spark," "Electrical Disturbances During the Charleston Earthquake," "Filaria Immitis," "The Ovoviviparous Reproduction of Fishes," "Hypertrophy of the Lingual Tonsil," "Electrolysis for Hypertrophic Rhinitis," "Deformities of the Nasal Septum," "Hysterical Aphonia," "The Electric Light Current in Medicine and Surgery," "Non-Malignant Tumors of the Larynx," "The Prevention of Tuberculosis," "The Influence of Nasal and Naso-Pharyngeal Diseases on Other Organs," "Congenital Occlusion of the Posterior Nares," "Alarming Hemorrhage Following the Opening of the Antrum of Highmore Through the Alveolar Process," "The Comparative Pathology of the Negro in Diseases of the Nose, Throat and Ear, from an Analysis of 11,855 Cases," "The Application of Electricity to Surgery, with Special Reference to Diseases of the Nose, Throat and Ear," "Papillomata of the Soft Palate," "The Etiology, Symptoms and Treatment of Rhinoliths, with Report of a Case," "Vertigo of Naso-Pharyngeal Origin," "Keloid Tumors of the External Ear," "The Importance of Making a Careful Examination of the Ear, Nose and Throat from a Medico-Legal Standpoint," (this article was read before the Société Française d'Otologie, de Laryngologie et de Rhinologie in 1887, and was made the subject of special discussion at the next annual meeting); "A Fatal Case of Sarcoma of the Nose," "The Use of Peroxide of Hydrogen in Diseases of the Nose, Throat and Ear," "Fibroma and Mixo-Fibroma of the Naso-Pharynx," "The Influence of Diseases of the Accessory Cavities of the Nose on the General Health," "The Roentgen Method of Photography," "Diphtheria and Its Antitoxin," "The Use of Electricity in the Examination, Diagnosis, Prognosis and Treatment of the Nose, Throat and Ear," "Eucaine Hydrochlorate in Nasal Operations," "A Conservative Operation for the Removal of Nasal Synechia," "The Progress of Laryngology," "The Treatment of Laryngeal Tuberculosis with Cupric Interstitial Cataphoresis, with Report of Cases—The Advantage of Direct Laryngoscopy in this Method," "Conservatism in Nasal Surgery," "A Case of Mastoiditis Complicating Purulent Otitis Media Cured by Enlarging the Drum Perforation and Syringing the Tympanic Cavity," "The Importance of the Early Diagnosis and Treatment of Catarrhal Diseases in Children," "The Treatment of Suppurative Diseases of the Accessory Sinuses and of the Ear by Ozone Gas: The Description of the Apparatus for the Generation and Application of Ozone," "A Case of Necrosis of the Left Arytenoid Cartilage, Its Cure with Fixation and Shortening of the Cartilage, but with Unaffected Voice," "The Early Training of Children for Throat Examination," "The Sanitary Regulation of the Sleeping Car," "Transillumination in Diseases of the Nose, Throat and Ear," and others. Dr. Scheppegrell is vice-president of the New Orleans Electric Society, and chairman of the Committee on Scientific Discussions. He has traveled exten-

sively in Europe, Canada and the United States, and, as a mineralogist, has made tours over the Allegheny, Catskill and Adirondack mountains. In 1882 he married Miss Jessie A. Gambati, daughter of the late Professor Alessandro Gambati, the well-known artist and composer of Venice, Italy. They have one daughter, Jessie Agatha Scheppegrell.

COMINGOR, John A., of Indianapolis, Ind., is a native of the Hoosier State. In connection with his birth and early life the doctor has written as follows: "Like David Copperfield, I was born for what purpose I know not. Whether this trifling event took place at high noon, or at a dark and stormy hour of midnight, on Sunday or Friday, is not important; whether it occurred when all nature was in leaf and flower, and the birds were taking delight in flight and song, is still a matter of no moment, suffice it to say that I was born a Hoosier on the 17th of March,

*John A. Comingor.*

1828, in a log cabin, in the midst of a dense forest, far from city or village, and scarcely within the bounds of civilization. My boyhood life was exceedingly primitive and uneventful. I do not now remember a single word or act that is worthy of mention. At that time, with us, books were scarce. The Bible, catechism, and a few Sunday-school tracts comprised our library. Nature was our great book, school and teacher. She was then, and is now, replete with knowledge. Even now I turn her leaves and read her chapters with greater interest and profit than ever before. Nature to-day is just what she was then. She never changes, never issues a new edition. If asked she freely gives. The schools to which I had access were almost as primitive as my early life. The teacher strictly followed routine work, never varied. An object lesson was only a dream. So to giving a reason for the solution of proposition or problems was not even thought of. Why and how I came to drift and land in the medical profession I did not know then, and do not know now—fancy, I suppose. After read-

ing a few text books, and taking one course of lectures, I offered my services to the good people of Hendricks county, Indiana, in the year 1852. I was not called to fill a long-felt want. There was none to fill. I simply went. Already there were five well-established practitioners occupying the county town, and in 1854 we aided in organizing the Hendricks County Medical Society, which was among the first, as well as the best in the State. In the year 1860 I attended my second course of lectures in the New York Medical College, and graduated from that institution at the close of the session. In the spring of 1862 I was appointed surgeon of the Eleventh Indiana Infantry, and served in that capacity three years, after which I became a resident of Indianapolis." In 1866 Dr. Comingor aided in organizing the Indianapolis Academy of Medicine. From this organization originated the Indiana Medical College in 1869. Referring to the subject of this sketch a recent biographer has written as follows: "Among the most prominent and successful medical practitioners of Indianapolis, and it may be said in the State of Indiana, is Dr. John A. Comingor, who is one of the oldest practicing physicians in the city. He is honored and esteemed by the medical profession throughout all this part of the country. As a surgeon he is noted for his skill and success, and during his many years' practice as such in hospitals, dispensaries and private practice he has performed about every surgical operation known to medical science, having practically traversed the entire field of surgical practice. He has been surgeon of the Indianapolis City Hospital almost ever since the establishment of that institution, or for a period of over thirty years, performing the functions of that office without remuneration or hope of financial reward, and his weekly visits during this long period to the clinics and wards of the hospital have contributed greatly toward the high standing of excellence which obtains in that institution. He has always been solicitous for the welfare of this hospital, and every measure for its improvement, or for its better establishment has met with his hearty approval and most helpful and substantial support. During this time Dr. Comingor has occupied the Chair of Surgery in the Faculties of the Indiana Medical College and Central College of Physicians and Surgeons of Indianapolis. He was also surgeon-general of Indiana during the administration of Governor A. G. Porter, and has been, and is now, a member of his County, State as well as National Medical Association.

STANDLEE, E. Lee, of St. Louis, Mo., the subject of this biography, was born in Centre Point, Ark., November 9, 1864. He is of very honorable lineage, ancient Georgia and Tennessee families, who settled in Arkansas at an early day. Several members of the family have figured in the early history of the country as legislators, army officers, ministers and physicians. The early Standlee and Lee families were closely related and associated for many years, but the Standlee families sought the more western parts, and continued so to do until at present the largest part of them are located in Oregon and Southern California. Dr. Standlee's father, Dr. A. Standlee, who is a physician of much ability and still in active practice, served through the entire Civil War, mostly in the hospital service, where he gained a large experience in surgical work. He returned to

Amity, Ark., after the close of the war, where he was joined by his wife, who was Miss Martha Hardan Hill, whom he had married shortly before the war, and they located at this place, having then two children, the eldest a girl, while the subject of our sketch was the younger. Here they remained for over twenty-five years, and raising a family of seven children, four boys and three girls, six of whom are still living. Three of the boys are graduates of the American Medical College, and are successful practitioners of medicine. When one knows how much devoted Dr. A. Standlee has been to the profession for nearly forty years, it may not be difficult to see where the boys obtained a liking for the same. Professor Standlee was carefully trained by his parents, with a view to

*E. L. Standlee*

the profession of medicine, as he had in early childhood shown a manifest desire and aptitude for the same, especially surgery. He was fond of studying animal life and mechanism, frequently dissecting animals, as opportunity would afford; was attentive to sick and wounded animals on the farm, noting daily the progress of dressings, etc. He performed a number of splendid operations in minor surgery, and an amputation of an arm, in his father's practice, in the interim between his first and second course of lectures. He was from early life a close student, and at the age of seventeen years was elected first assistant teacher in the Amity High School, and in his nineteenth year, on the sudden death of the principal, E. Lee Standlee was elected to fill the unexpired term, which he did with much credit. Having chosen medicine as a profession, he reapplied himself

to it, and was graduated in 1886 from the American Medical College, receiving at that time both the honors of the faculty and class. He was elected to fill the Chair of Anatomy in the college the same year, and has continued until the present in this position. As a teacher in anatomy he is inferior to none in St. Louis, and as an operator his work in the college, City Hospital, and several private hospitals of this city and vicinity, has demonstrated his thorough ability as a surgeon. Professor Standlee has gained considerable distinction in both the State and National associations on account of work done, being an ex-president of the State Association, and chairman of the Gynecological Section of the National Association. A member of the American Public Health Association, and since 1895 a member of the State Board of Health of Missouri, was vice-president for 1897 and acting president part of that year, and was elected its president for 1898. Professor Standlee was married on April 29, 1892, to Miss Flora N. Crane, of Peoria, Ill., and to them was born a beautiful and bright baby girl—Nevada Lee—but whom they lost in her second year, of meningitis. The doctor has been connected with various societies and charities for many years, is an active member of the Methodist Church, and has in the meantime builded a splendid practice in St. Louis, to which he is much devoted.

GAMBER, William Perry, of Stanton, Mich., born December 27, 1854, at Fayette, Ohio, is the son of George and Carolina (Bachman) Gamber, of New York, grandson of John Gamber, of Pennsylvania, and great-grandson of John Gamber, who was born in Germany. He was educated at the High School, Fayette, Ohio, at the Normal School of Bryan, Ohio, and at the High School, Morenci, Mich., working on his father's farm during vacations. From eighteen until twenty-three years of age he taught school, and in 1878 commenced the study of medicine at Fayette, Ohio, under E. H. Korick, M. D., of that place. He attended one course of lectures at Detroit College of Medicine, and entered the Western Reserve University, Medical Department, Cleveland, Ohio, from which he was graduated March 4, 1881. He attended lectures and was a matriculant in the College of Physicians and Surgeons in the city of New York during the last half of the term of 1884-85, and at the same time took a post-graduate course in the New York Polytechnic. Dr. Gamber commenced the practice of medicine at McBride, Mich., in the summer of 1881, and remained there seven years, holding the position of health officer of that town, and also of the township of Day; he was also elected village president and village clerk, one term each, and two terms clerk of the township of Day. Dr. Gamber removed to Stanton, Mich., in 1888, and is health officer of that city and member of the board of education. He is a member of the Michigan State Medical Society and secretary of the Stanton board of pension examining surgeons; member of the American Medical Association; also a member of the Independent Order of Odd Fellows and of the Knights of Maccabees. He is a registered pharmacist in the State of Michigan, having received a diploma from the State board in March, 1887. Dr. Gamber has given special attention to diseases of the eye and ear; has performed two operations for removing cancer of the breast, two for trephining the skull, two for

iridectomy and a number of tenotomies for convergent strabismus, besides other operations. He has made some original research in bacteriology with a No. 1 microscope magnifying 2,400 diameters. He is also using a cabinet combined Faradic and galvanic battery of his own construction. A paper from his pen on the "Restriction and Prevention of the Dangerous Communicable Diseases, from the Standpoint of the Health Officer and Physician," was published in the Proceedings of the Sanitary Convention held at Stanton, April 27, 28, 1893. He is also the author of papers on "Typho-Malarial Fever," "Digestion," "Bacteriology in Midwifery and Prophylaxis of Puerperal Fever," read before the Michigan State Medical Society May 3, 1894, and published in its Transactions, also in the *Medical and Surgical Reporter*; "A Report of Three Cases of Op-

*William Perry Gamber.*

erative Appendicitis," read before the Grand Rapids Academy of Medicine October 21, 1895; "A Report of Six Cases of Operative Appendicitis," read before the Michigan State Medical Society at Mt. Clemens June 4, 1896, and published in its Proceedings. In addition to surgical operations mentioned in the foregoing sketch, Dr. Gamber has operated for cataract, and made several laparotomies for appendicitis and oophorectomy. Dr. Gamber married, first, in 1883, Miss Addie I. Rood, of McBride, who died in 1890; married, second, in 1892, Miss Lilla M. Buckrell, born January 2, 1871, at Wintworth, Ont., and a graduate of Stanton High School. They have one child, William George Gamber, born July 3, 1893.

BRUMME, Carl Conrad Georg, of Detroit, Mich., born June 21, 1817, at Goettingen, Provinz of Hanover, Germany. His father, Wilhelm Diedrich Brumme, a surgeon, son of Samuel David Brumme, a descendant of Hu-

guenots, was born at Hamburg, Germany, April 4, 1777. His mother, Marie Dorothea Caroline (Muehlenpfordt) Brumme, was born May 4, 1783, in Goettingen. His grandfather, on the maternal side, Johann Heinrich Muehlenpfordt, who was born December 16, 1726, in Goettingen, and died May 2, 1807, was a gold- and silver-smith, city senator and organist of St. Crucis Church. Two brothers of his ancestors of the same name, who were prominent men of the city, were leaders of the Reformation. Dr. Brumme was educated in the elementary schools until his eleventh year, when he entered the High School, called Gymnasium, in Goettingen; commenced the study of medicine in 1840 in the University of Goettingen, called Georgia Augusta, where he was under the preceptorship of Professors K. F. Martin Langenbeck (uncle of Bernard von Langenbeck),

*Carl Conrad Georg Brumme.*

Conradi Marx, Edward von Siebold, Woehler (the discoverer of aluminum in 1827), Berthold, Fuchs, Rudolph Wagner, Bartling, Bernhard von Langenbeck, Trefurt, Ruete, Listing and Drs. Kraus and Pauli. He matriculated at this institution May 4, 1840; attended eight courses of lectures, and was graduated August 8, 1844. In August, 1843, Professor von Siebold made him his assistant as man-midwife in the Royal Lying-in-Hospital of the University of Goettingen, in which situation he was confirmed by the government in 1846, and continued in that position until the summer of 1852, when he came to the United States and settled in Detroit. Dr. Brumme became a member of the Michigan State Medical Society at its establishment in 1866, and in 1884 was made vice-president; has been a member of the American Medical Association since 1874, when the association met in Detroit, and was present at the meetings in Chicago, Buffalo, New York, St. Paul, Cleveland, New Orleans, Cincinnati,

Milwaukee, Indianapolis, Detroit, second time, and at Washington at the meeting of the International Medical Congress in 1887; was a charter member of the Wayne County Medical Society, vice-president in 1869, and was acting president in the absence of the president, Dr. Peter Klein. As legislator to Lansing he served with Drs. Zina Pitcher and William Brodie on the Detroit Board of Health. He is a member of the newly organized Quarter Century Medical Club in Detroit, whose members must have practiced as physicians in Detroit twenty-five years. Dr. Brumme married first, in 1852, Miss Emilie Steiniger, daughter of a military surgeon; she died in 1873, leaving three children, Minna, Lillie and Carl. In 1875 he visited his native country, and while there married his niece, the widow of Lawyer Augustus Henze; she died in 1889.

NANCREDE, Charles Beylard, of Ann Arbor, Mich., born December 30, 1847, in Philadelphia, Pa., is the son of Thomas Dixie and Mary Elizabeth (Bull) Nancrede, and grandson of Paul Joseph Guerard de Nancrede, a native of France. He was a student in private classical schools and in the literary department of the University of Pennsylvania until the early part of his junior year, and then transferred to the Medical Department of the same university in 1866, where he attended three courses of medical lectures, and was graduated March 13, 1869. He then served one year as interne at the Protestant Episcopal Hospital, Philadelphia, and in 1870 commenced the private practice of medicine in that city, remaining there for nearly twenty years. He was assistant demonstrator of anatomy, and lecturer and demonstrator of osteology in the same school for years. Dr. Nancrede attended one course of lectures at Jefferson Medical College, and was graduated in March, 1883. He also received the honorary degree of A. B. from the University of Pennsylvania in 1893, and honorary A. M. in 1894, and honorary A. M. from the University of Michigan in 1893. Dr. Nancrede is an ex-member of the Academy of Natural Sciences; member of Philadelphia County Medical Society, its secretary in 1877-79; Medical Society of the State of Pennsylvania, Philadelphia Pathological Society, recorder in 1882-84; American Medical Association, American Surgical Association, vice-president in 1889-90; Michigan State Medical Society, Wash-taw County (Mich.) Medical Society, president in 1892; corresponding member of the Royal Academy of Medicine of Rome, member of the Northern Tri-State Medical Society, Saginaw Valley Medical Association, member of Advisory Board of the Athletic Association of the University of Michigan from 1891 to 1893, chairman of the Board of Control of Athletics in the University of Michigan since 1894, director of the Choral Union of that university, and member of the Board of Directors of the Ann Arbor School of Music since 1894. Dr. Nancrede was attending physician to Catharine Street House of Industry, Philadelphia, from 1870 to 1875; Assistant Surgeon from 1870 to 1877, and Senior Surgeon from 1877 to 1889, to Protestant Episcopal Hospital; Surgeon to Jefferson College Hospital from 1886 to 1889, Senior Surgeon to St. Christopher's Hospital for Children from 1881 to 1888, Lecturer on Surgery in Dartmouth Medical College in 1887, Professor of General and Orthopaedic Surgery in the Philadelphia Polyclinic from 1882 to

1886, and Emeritus Professor of same at that institution since 1890, Professor of Surgery and of Clinical Surgery in the Department of Medicine and Surgery of the University of Michigan since 1889, and Surgeon to University Hospital, Ann Arbor, Mich., since 1889. Dr. Nancrede was the first surgeon in Philadelphia to operate for gunshot wounds of the intestines, and was one of the earliest to operate for brain abscess and to excise cortical centres for epilepsy. He was one of the very earliest, if not the earliest, to adopt strict Listerism, and fight its battles in America, and has made experimental observations upon the gastric juice of the dog, and upon the effect of blood-letting in inflammations. Dr. Nancrede has been a voluminous writer, including among many others, about fifty papers or communications, with specimens, to the Philadelphia

*Charles Beylard Nancrede.*

Pathological Society, which appeared in the transactions of that society or in various medical journals. The most important of these papers were "Etiology of Fractures of the Cranial Base, and the Anatomico-Pathological Reasons for their Fatality," "Causative Relations Existing Between the Anatomical Arrangement of the Tissues and their Morbid Growths," "A New View of the Pathology of Phlebitis," annual oration before the Philadelphia Academy of Surgery January 31, 1888, on "Recent Advances of the Surgery of the Brain;" annual oration before the Surgical Section of the Michigan State Medical Society, 1892, on "The Modern Anti-Bacillary Treatment of Tuberculosis of the Joints." He is also the author of a paper on the "Total Excision of the Lower Jaw," *Annals of Surgery*, 1892; "A Review of Some of the Facts of Listerism," *Archives of Medicine*; "Principles Underlying Modern Wound Treatment," *ibid.*;

"Surgical Interference in Cerebral Abscess," read before the American Surgical Association; "Should Laparotomy be Done for Penetrating Gunshot Wounds of the Abdomen Involving the Viscera?" *ibid.*; "A Rare Form of Epithelioma of the Hand," *ibid.*; "Very Large Lymph-Cyst (Chyle-Cyst) of the Right Side of the Neck," *ibid.*; "Surgical Treatment of Cervical Thoracic and Abdominal Aneurisms," *ibid.*; "The Proper and the Improper Methods of Using Extension in Morbus Coxarius," *Annals of Gynecology and Pediatrics*; "Abdominal Section for Appendicitis," and "Clinical Cases of Interest," *Michigan Physician and Surgeon*; author of a book on "Essentials of Anatomy," now in its fifth edition; author of sections on "Injuries and Diseases of Bursae and of Injuries of Head," Vols. II, V, *International Cyclopedia of Surgery*, and editor of the section on "Injuries of Lymphatics" for the third edition of the same work; author of the article on "Surgery of the Brain and Spinal Cord," Vol. IV, *Cyclopedia of Diseases of Children*; "Hemorrhoid and Hemorrhage," *Woods' Hand-Book of the Medical Sciences*; author of the chapter on "Surgical Bacteriology," sixth edition of *Ashhurst's Surgery*; author of *Surgical Treatment of Croup and Diphtheria*; "System of Diseases of Nose, Ear and Throat" (Barnett); author of six sections of the *American Text-Book of Surgery*; author of chapter on "Symptoms, Diagnosis and Treatment of Inflammation, Abscess, Ulcer and Gangrene;" *Dennis System of Surgery*, and of the following chapters in *Park's System of Surgery*, "Wounds Unaccompanied by Surface Lesions, Repair of Injuries of the Various Tissues, Aseptic and Anti-Septic Treatment of Wounds and Gunshot Wounds." On the declaration of war with Spain Dr. Nancrede was among the first of the eminent physicians and surgeons in this country to offer his service in the medical department of the United States army. As one of the chief surgeons he has remained in the field and hospitals of the South until the end of hostilities, and the valuable aid he has rendered is a matter of history. On June 3, 1872, Dr. Nancrede married Miss Alice Dunnington, of Baltimore, Md. Their five living children are Edith D., Alice N., Katharine L., Pauline and Henry Walston. Four older sons are deceased.

BAUGHMAN, John Nathan, of Flat Lick, Ky., son of Abram Franklin and Thirza Ann (Campbell) Baughman, grandson of John Baughman, was born in Knox county, Kentucky, April 10, 1853. He was educated in the common schools of Knox county, and also attended one session of a select school in Barbourville, Ky. He began the study of medicine in 1872, under John H. Westerfield, M. D., in Knox county; attended two courses of medical lectures at the University of Louisville, Medical Department, and was graduated March 1, 1875, receiving honorable mention in surgery and obstetrics. He also took a post-graduate course of lectures at the National Medical College, Washington, D. C., during the winters of 1882-83 and 1886-87. Dr. Baughman began the practice of medicine in 1873 in Knox county, where he continued until 1882, with the exception of the year of 1876, which was spent in Johnson county, Arkansas. He was a medical examiner United States pension office, Washington, D. C., 1886 and 1887, being especially detailed in the section on diseases of the eye

and ear, and was one of the attending surgeons to Washington City Eye and Ear Infirmary

*John Nathan Baughman.*

during the winter of 1886-87; was secretary of the pension examining board of Harper, Kan., and Barbourville, Ky., and was chairman of the board of medical examiners of the fifteenth judicial district, Kentucky, 1877-82. He was special United States pension examiner, 1883-86, being detailed in Indiana and Michigan. During the years 1887-88 Dr. Baughman practiced medicine in Harper, Kan.; was in Farwell, Tex., in 1889, and since then has been a resident of Flat Lick, Ky. Dr. Baughman is a member of Knox County Medical Society, Southeastern Kentucky Medical Society, Central Kentucky Medical Society, Kentucky State Medical Society, vice-president in 1894, and of the American Medical Association. He is a thirty-second degree Mason and a Knight Templar, was a delegate from Kentucky to the National Republican Convention, Chicago, 1884, and was an enthusiastic supporter of James G. Blaine. He is the author of a paper on "Uses and Abuses of Ergot," read before the Southeastern Kentucky Medical Society, Barbourville, August, 1893, and published in its Transactions; also an essay on "Fistula in Ano," read before the Kentucky State Medical Society, 1893, and published in its Transactions, besides various other papers. Married, December 7, 1886, Miss Lelia, daughter of Col. Aden G. and Matilda Livingston Cavins, Bloomfield, Ind.

HOLDERNESS, Edward Page Granville, of Chenoa, Ill., born November 5, 1832, at Manchester, Eng., is the son of Dr. William Henry and Harriet (Kitching) Holderness, grandson of Hon. Skiffington Holderness, whose younger children were cared for and educated by the

English government, since he was an officer in the English service at the time of his death. Dr. William H. Holderness, after receiving his degrees in medicine, came to the United States, with his family, early in the year 1833, and first settled in eastern Kentucky. Later he moved to southern Indiana, but remained there only a few years, then returned east to Adams county, Ohio, where he settled on a little farm and practiced medicine. Dr. Holderness was educated in the common schools of Adams county, Ohio, and in the select or High School of Manchester, Ohio; worked at the printer's trade from 1840-48, in Ripley, Ohio; in 1848 or '49 returned home and worked on the farm; in 1850 started the *Pioneer of Progress*, a weekly newspaper, in Concord, Lewis county, Ky., but abandoned it after one year, as it was not a financial success; in 1851-52 made several trips down the Ohio and Mississippi rivers, working for eight or ten dollars a month. After attending the Manchester High School, summers of 1853 and 1854, he taught school winters, and in 1855 began to read medicine with his father, having read intermittingly before that date. In June, 1855, the Asiatic cholera was introduced into the neighborhood by a young man who had been employed upon a steamer on the Ohio and Mississippi rivers. This disease spread rapidly, his mother being one of the victims, while his father barely escaped. His disability threw the whole work upon the son, and it was at this time that he first learned the use of antiseptics—creosote, an account of which was published in a weekly medical journal of Columbus, Ohio, of that year. In 1855 he attended lectures at the Eclectic College of Medicine and Surgery, Cincinnati, Ohio; the next spring he rode on horseback to McLean county,

*Edward P. G. Holderness.*

Illinois, where he worked and taught school, to procure the means for further study. In the

fall of 1858 he became the assistant of Dr. J. W. Waters, of Pleasant Hill, Ill.; continued reading and teaching until the winter of 1859-60, when he matriculated at the Missouri Medical College, and was graduated in the spring of 1860. In 1861 he settled in the practice of medicine in Towanda, Ill., remaining there until the autumn of 1875, then moved to Chenoa, in the same county. He attended lectures at Bellevue Hospital Medical College during the session of 1864-65, and took a post-graduate course in 1874-75 at Bellevue, receiving the degree of M. D. again at this time. Spent part of the winter of 1888-89 at Rush Medical College, Chicago, doing special work. During the winter of 1894-95 took a general course in New York Post-Graduate Medical School, and specials in New York Polyclinic in the spring following. Dr. Holderness is a member of the McLean County Medical Society, of the Illinois State Medical Society, of the American Medical Association, of the Independent Order of Odd Fellows, of the Masonic fraternity, Royal Arch Chapter, and an elder in the Presbyterian Church. Married, in June, 1860, Miss Lurinda A. Mitchell, of Pleasant Hill, Ill. They have no children.

**MERRIAM, Cyrus Knapp**, of Spokane, Wash., son of Lewis and Mary Ann (Foss) Merriam, grandson of William Merriam, of New Salem, Mass., was born June 29, 1848, at Houlton, Me. He is a brother of Colonel H. C. Merriam, commanding Seventh United States Infantry, and Captain Lewis Merriam, United States Army, retired. He was educated at Houlton Academy (now Ricker Classical Institute) and at Colby University, receiving from the latter institution the degree of A. B. in 1875, and A. M. in 1882. He taught during college vacations, and obtained his education under trying difficulties. At the university he became a member of the Delta Kappa Epsilon Fraternity. He was appointed sub-master of the Oliver Grammar School and teacher of penmanship in the city schools of Lawrence, Mass., for the academic year of 1875-76. While here teaching he began the study of medicine under Dr. Cyrus L. Chamberlin, of that city, and subsequently under Dr. Benjamin F. Bussey, of Houlton, Me. Entered Bellevue Hospital Medical College in New York city in 1877, and the following summer studied under the tutorage of Drs. Burnham and Benoit, of Lowell, Mass. He took the second course of lectures at the Medical Department of the University of the City of New York, from which he was graduated in February, 1879. In the latter institution he took private instruction in diagnosis and in surgery under Professor A. L. Loomis and General John B. Darby, respectively, and was highly complimented by the latter for his natural aptitude and skill in surgical work. After practicing one year with his former preceptors in Lowell, Mass., he was appointed Acting Assistant Surgeon United States Army, and assigned temporarily to duty at Vancouver Barracks, Washington Territory, in March, 1880. He served with the United States troops in the Department of the Columbia for eight years, and was frequently in the field with troops directed to look after the welfare of friendly Indians, as well as to curb renegades of Chiefs Moses and Joseph's bands and the Kalispels. He was stationed at Camp Chelan, White Bluffs, Fort Colville, Fort Cœur d'Alene, Idaho (now Fort Sherman), and Fort

Spokane, much of the time as Post Surgeon. During his connection with the army he was complimented by both officers and men for his efficient work and care in the treatment of many critical cases, and while at Fort Colville, in 1882, was complimented by the Medical Director of the Department, Colonel John Moore (now Surgeon-General United States Army, retired) for the diagnosis and treatment of an obscure and difficult case. Dr. Merriam severed his connection with the army in December, 1887, and settled in Spokane. He was one of the founders of Spokane County Medical Society in 1888, and was its secretary during the first two years of its existence. He also took part in the organization of the Washing-

*C. Merriam*

ton State Medical Society in October, 1889, and became its president in May, 1890, and at the society's meeting in Seattle had the honor of delivering its first presidential address, which is published in the Transactions of the Society for 1891. Dr. Merriam is a member of the staff of the Sacred Heart Hospital of Spokane, having held the position since 1888, and member of the American Medical Association.

**QUINN, Allen Trimble**, of Wilmington, Ohio, son of Rev. Isaac Quinn, M. D., and Cynthia Cecil (Witten) Quinn, was born December 16, 1837, on a farm near Hillsborough, Highland county, Ohio. Educated in the common schools until the age of seventeen, he then taught school during the winter months, attending the Ohio University, Athens, spring and summer sessions, from which he was

graduated; commenced the study of medicine in 1859, with Dr. C. C. Sams, Hillsborough, Ohio,

*Allen Trimble Quinn.*

and later with Dr. W. W. Dawson, of Cincinnati; attended two courses of lectures at the Medical College of Ohio, Cincinnati, graduating March 3, 1862. He passed the Army Medical Examining Board at Louisville, Ky., March 31, 1862; was appointed Acting Assistant Surgeon, U. S. A., and was assigned to duty with the Army of Ohio, General Buell commanding. Later he was transferred to the Department of the Cumberland, Generals Rosecrans and Thomas commanding, serving until the capture of Atlanta, autumn of 1864. He then resigned, and returning to Ohio, located at Wilmington, in November, 1864, where he has since been actively engaged in the practice of medicine. Dr. Quinn is a member of the Clinton County (Ohio) Medical Society, president in 1884; of the Miami Valley Medical Society, president in 1887; permanent member of the American Medical Association, member of the Ohio State Medical Society, of the National Association of Railway Surgeons, of the Ohio State Association of Railway Surgeons, and of the Baltimore and Ohio Association of Railway Surgeons, vice-president since 1894. He was physician to the Clinton County Infirmary from 1870 to 1882; Pension Examining Surgeon from 1881 to 1893; has been a member of the Board of Health of Wilmington since 1890; physician to the Clinton County Children's Home since 1883; physician to the Clinton County Jail since 1874; surgeon to the Baltimore and Ohio Railway since 1887, and to the Cincinnati and Muskingum Valley Railway since 1886. Dr. Quinn is a Mason, and a member of the Wilmington Blue Lodge, Chapter, Commandery, Syrian Temple and Mystic Shrine, Cincinnati; a member of the Wilmington Lodge, Independent Order of Odd Fellows, and a member of the

Grand Army of the Republic, Assistant Inspector-General of the National Encampment in 1889. Married, Miss Mary, daughter of W. B. Fisher, editor of the *Clinton Republican*. They have no children.

CARTER, James Madison Gore, of Waukegan, Ill., son of Rev. William Barton and Mary Ann (Deans) Carter, grandson of Rix Carter, a native of Virginia, of Revolutionary parents, was born April 15, 1843, in Johnson county, Illinois. His preliminary education was obtained in the Illinois State Normal School and St. John's College, from which he received the degree of Ph. B. in 1874, and A. B. in 1877. He enlisted as a private in Company K, Sixtieth Regiment, Illinois Infantry, in October, 1861, and served until May, 1865. He marched with General Grant to Chattanooga, Tenn., thence with General Sherman to Atlanta and the sea. He was captured on the march from Savannah north, and was taken to Libby Prison, where he was paroled the day that Fredericksburg was taken. During the last nine months he served as orderly at brigade headquarters, and frequently carried orders under fire on the front battle line. After leaving the army he taught school to pay his way through college and received a state teacher's diploma from the Superintendent of Public Schools of Illinois in 1872. He was principal of the High School, Shawneetown, Ill., from 1869 to 1872, and of the Little Rock Grammar and High Schools from 1872 to 1874. He commenced the study of medicine in Chicago, Ill., and continued for three years under the instruction of Professor J. S. Jewell, A. M., M. D., of that city, before entering the Chicago Medical College. He at-

*James Madison Gore Carter.*

tended two courses of medical lectures at the latter institution, and was graduated in 1880.

He commenced the practice of medicine (Lincoln) same year at Grayville, Ill.; continued great- until May, 1883, and since that date has located at Waukegan, Ill. After having pursued special studies at McKendree College, Lebanon, Ill., he received, in 1881, the degree of A. M., and in 1887 the degree of Ph. D., for special work in history and philosophy; also, the degree of Sc. D., for special work in botany and geology, from Lake Forest University, Lake Forest, Ill., in 1887. Dr. Carter is a member of the Lake County Medical Society, Chicago Medical Society, Illinois State Medical Society, American Medical Association, Chicago Academy of Sciences and the American Academy of Social and Political Science. Dr. Carter is also a Fellow of the American Academy of Sciences and of the American Association for the Advancement of Science. He has several times been president of Lake County Medical Society; elected first vice-president of Illinois State Medical Society in 1895 and re-elected in 1896. Dr. Carter was elected president of the Illinois State Medical Society at the annual meeting, in May, 1897. He is Professor of Preventive and Clinical Medicine, and was lately Professor of Pathology and Hygiene in the College of Physicians and Surgeons, Chicago. He was a member of the Ninth International Medical Congress, 1887, at Washington, D. C., and vice-president of Section on Materia Medica. He was chairman of the Section of Practical Medicine, Illinois State Medical Society, 1890, of Etiology and State Medicine, 1892, and of the committee on medical legislation, 1892-93. He was for two years observer for the Illinois State Signal Service, during which time he observed the meteorological influences upon disease near the lake; also made researches into the etiology of catarrhal diseases, and the influence of the climate of the lake region in this relation. He has contributed to medical literature a work on the "Medical Botany of Illinois," 1884; "Outlines of Medical Botany of the United States," 1888, and many papers before medical societies. He was one of the first to urge the Methodist Episcopal Church, of which he is a member, to adopt individual cups at communion service, to prevent the communication of contagious diseases. Is a contributor to the *International Clinics*. In 1895 published a work on "Catarrhal Diseases of the Respiratory Organs." Is a Knight Templar and a member of the G. A. R. Dr. Carter has been a member of the board of education of Waukegan for several years, and president of the Young Men's Christian Association. Married, first, 1873, Miss Eunice R. Northrop, of Fairfield, Vt., who died in June, 1887, leaving three children, Florence Emeline, Helen Mary and William Northrop Carter. He married, second, in 1890, Mrs. Emogene P. Earle, of Chicago, Ill.

**BIGHAM, John Glasgow**, of Millersburg, Ohio, son of John and Eliza (Glasgow) Bigham, grandson of James Bigham, was born April 22, 1835, at Millersburg. His only sister, Maria Irvine, accompanied her husband, Rev. D. E. Campbell, to India in 1850, as a missionary, under the auspices of the Presbyterian Board of Foreign Missions. Each of them, together with two children, were slaughtered by the Sepoys in the terrible massacre at Cawnpore in June, 1857. The only surviving member of the family was the late Rev. E. D. Campbell, of the United Presbyterian Church. Dr. Bigham

in surgery, and has performed many of the capital operations, such as amputations at hip joint, herniotomy, trephining, exsections, amputation of breast and removal of cataract. In 1885, Dr. Stone married Miss Mary P. Sword, niece of Colonel Parnell, United States Army, retired. Their children are, Amy Winifred Smith Stone and Katharine Malvina Stone. **HILL, Horace Barrows**, of Augusta, Me., the son of William Colman and Charlotte Hobbs ter Hill, was born June 29, 1851, at Har-Mississle. He was fitted for college at Bridg-the near-emy, North Bridgton, Me.; entered with a br-College in 1869, and was graduated hundred ac; the class of 1873, taking the degree weeks, for pla1876. Following graduation in for fence posts. d in teaching until 1877, when land agency fir. medicine at Lewiston, under many thousands of brother, E. H. Hill, M. D., the government larded one course of lectures

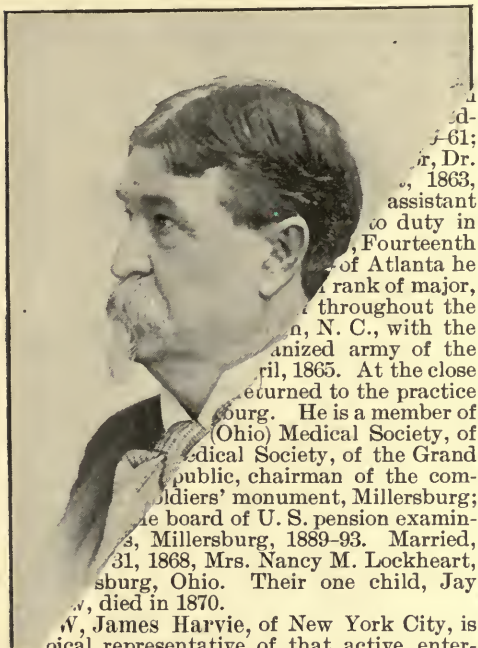

*John Glasgow Bigham.*

and Minnesota, as far north as Mille Lac. In this connection Dr. Bigham writes: "On these journeys, made alone, with the verdure for a couch and the saddle for a pillow, bands of the Pottawattamic, Sac, Sioux and Chippewa Indians were met in their respective regions. In July, 1856, at a point west of Mille Lac, in northern Minnesota, while selecting pine lands, I met a caravan *sui generis* and quite unique. It was the annual supply train of the Pembina people, from the Red River of the north, carrying furs, pemican and other material to St. Paul. There were nearly three hundred carts, each drawn by a single black ox. The vehicles and equipment contained no iron or other metal, the tires being of raw hide. The season being dry, the creaking of the long line of carts afforded music as weird as the outfit was peculiar—in a region many miles from a human habitation." Dr. Bigham returned to Millersburg in December, 1856, and commenced the study of medicine in the office of Dr. T. G. V. Boling; attended lectures at the Department

graduated; commenced the study of medicine in 1859, with Dr. C. C. Sams, Hillsborough, Ohio,

Dr. Dew, of New York City, is a typical representative of that active, enterprising set of Southern men who during the latter part of the sixties found their way to New York to seek success and reputation where the struggle was fiercest. He was born October 18, 1843, in Newtown, King and Queen county, Va. His father, Benjamin Franklin Dew, a courteous and genial gentleman of the old Virginia type, was graduated from William and Mary College, taking successively the degrees of A. B., M. A. and B. L. He was an extensive land-owner, and one of his estates was the historic "Malvern Hill," where the celebrated battle of that name was fought in 1862. His grandfather was Thomas Dew, a captain in the war of 1812, and a descendant of the Hon. Thos. Dew, a speaker of the House of Burgesses in the old colonial days of Virginia. His mother was Mary Susan, a daughter of Col. Reuben M. Garnett, also of King and Queen county. He is a nephew of the late Thomas R. Dew, a successful and distinguished professor, writer and president of the old William and Mary College, and a brother of Judge John G. Dew, of Virginia. Dr. Dew was educated at Prof. Gessner Harrison's preparatory school and at the University of Virginia. His academic course of study was interrupted by the outbreak of the war in 1861, and at the age of eighteen he enlisted in "Lee's Partisan Rangers," commanded by R. E. Lee's son, Wm. H. F., afterwards Maj.-Gen. Lee. This troop soon merged into the Ninth Virginia cavalry, and here he served until the close of the contest, under "Jeb" Stuart and his successors. This service afforded the experience and opportunity which enabled the Doctor to publish "a most unique and valuable" contribution to the history of the war, presenting the conditions, circumstances and peculiarities which led to the development and characteristic features of "The Yankee and Rebel Yells." This article appeared in the April number of the *Century*

Grand e for 1892. Dr. Dew commenced the study of medicine in January, 1866. His preceptors were Dr. Wm. D. Quisenberry, of Vir-B. A., and Dr. Joseph W. Howe, of New York. He was graduated from the University of Virginia in June, 1867, served as house physician and surgeon to the Charity Hospital, New York, from April, 1868, to October, 1869, and commenced the practice of his profession in 1870. He was appointed Professor of Anatomy, Physiology and Hygiene in the New York Evening High School in 1872, and continued his lectures till 1881, when the urgency of his professional work induced his resignation. His experience in a great hospital for all diseases, and the universal applicability of the subjects upon which he lectured for so many years, has served especially to qualify him for general practice. In this field, and in obstetrics, he has met with

*James Harvie Dew*

eminent success. Dr. Dew is a member of the New York Academy of Medicine, the Medical Society of the County of New York, the Alumni Association of the Charity Hospital, the New York County Medical Association, and of "The New York Southern" and other societies. Among his literary efforts he has recently contributed a paper, "Establishing a New Method of Artificial Respiration in Asphyxia Neonatorum," called "Dew's Method," which was read before the New York Academy of Medicine in February, 1893. This method has, to date, met with almost universal approbation, and has already been taught in a number of our leading medical schools. Dr. Dew was married in 1885 to Miss Bessie Martin, only daughter of Dr. Edmund H. Martin, late of Memphis, Tenn., now of Louisville, Ky. They have but one child, Caroline Welborn Dew.

STONE, Solon Buckley, of Lewistown, Mont., born February 26, 1855, at Randolph, Vt., is

the son of Orville Buckley and Melvina (Lincoln) Stone, grandson of Uriah Stone, great-

in surgery, and has performed many of the capital operations, such as amputations at hip joint, herniotomy, trephining, exsections, amputation of breast and removal of cataract. In 1885, Dr. Stone married Miss Mary P. Sword, niece of Colonel Parnell, United States Army, retired. Their children are, Amy Winifred Smith Stone and Katharine Malvina Stone.

HILL, Horace Barrows, of Augusta, Me., son of William Colman and Charlotte Hobbs (Bray) Hill, was born June 29, 1851, at Harrison, Me. He was fitted for college at Bridgton Academy, North Bridgton, Me.; entered Bowdoin College in 1869, and was graduated therefrom in the class of 1873, taking the degree of A. M. in 1876. Following graduation in 1873, he engaged in teaching until 1877, when he began to read medicine at Lewiston, under the direction of his brother, E. H. Hill, M. D., of that place; attended one course of lectures at the Medical School of Maine at Bowdoin College in 1878, and two courses at the Long Island College Hospital, graduating from the last-named institution in the class of 1880. In the fall of the same year he entered the office of his brother, remaining there as assistant until April, 1881, when he was appointed assistant physician to the Maine Insane Hospital. In June, 1883, Dr. Hill was promoted to be assistant superintendent of the same institution, and has since held this position. Dr. Hill is a member of the Maine Medical Association, of the American Medico-Psychological Association, of the American Academy of Medicine, of the Medico-Legal Society of New York and of Trinity Commandery, Augusta. Married, in 1887, Miss Jennie D. Redlon, who died in 1889;

grandson of Professor Nathan Smith, M. D., the founder of the Medical Department of Yale University, and a cousin of Dr. David P. Smith, late Professor of Surgery at Yale. He was educated in the common schools and at the High School of Gardner, Mass.; commenced the study of medicine in 1876, at Washington, D. C., under the preceptorship of his uncle, Professor Nathan Smith Lincoln, M. D., and his great-uncle, Professor Nathan R. Smith, M. D. (the inventor of "Smith's anterior splint"), of Baltimore, Md.; attended three courses of lectures at the National Medical College, Medical Department of the Columbian University, Washington, and was graduated therefrom in 1879. In October, of the same year, Dr. Stone was commissioned Acting Assistant Surgeon, United States Army, and was stationed at Fort Bowie, Ariz., two years; at Fort Maginnis, Mont., five years; at Fort Missoula, Mont., one year; at Fort Shaw, Mont., one year; then resigned from the army and has been a practitioner at Lewistown since 1888. While Post Surgeon at Fort Missoula, Mont., Dr. Stone built the military hospital at that post. He is a fellow of the Massachusetts Medical Society, of the Montana State Board of Health, of the Society of Acting Assistant Surgeons, United States Army, and of the Independent Order of Odd Fellows. Dr. Stone has been surgeon to Fergus County Hospital, Lewistown, since 1892. He is chiefly interested

again married, June 14, 1893, Miss Harriet Lumbert Metcalf.

JACKSON, William Richard, of Mobile, Ala., son of William Daniel and Mary Adelia

*W. R. Jackson,*

(Brown) Jackson, grandson of William Samuel Jackson, was born June 16, 1864, at Chireno, Tex. With a preparatory education at the Chireno High School, the Woodville Institute, and the Nacogdoches (Texas) University, he began to read medicine in 1883, at Nacogdoches, under Drs. F. C. Ford and J. T. Hoya; attended two courses of lectures at the Medical College of Alabama, Mobile, was graduated therefrom in 1888, and immediately commenced the practice of medicine in Mobile, where he has since continued. He was resident physician to the City Hospital, Mobile, 1888; visiting physician to the same from 1889 to 1892; has been Demonstrator of Anatomy since 1888; Lecturer on Minor Surgery since 1890, and Assistant in the Laboratory of Operative Surgery since 1893, all in the Medical College of Alabama. Dr. Jackson is a member of the Medical Association of the State of Alabama, the American Medical Association, and of the Mobile County Medical Society, secretary in 1891, and treasurer in 1893. He is the author of papers on "Diseases of the Cecum and Appendix," *Alabama Medical and Surgical Age*, May, 1892; "Tropho-Neurosis a Causative Factor in Disease," *ibid.*, November, 1892; "Uremia," *ibid.*, April, 1893; "Angina Pectoris," *Virginia Medical Monthly*, February, 1891; "Catarrh of Prostatic Urethra," *ibid.*, June, 1891; "Hemorrhagic Malarial Fever," *Medical Progress*, 1891; "Present Status of Surgical Bacteriology, including Prophylaxis," *Mississippi Medical Monthly*, January, 1894; "Polypi of the Bladder and Tubercular Peritonitis," *Medical News*, Philadelphia, May 31, 1890; "Supra-pubic Section for Vesical Cal-

culus," and "Vaginal Hysterectomy for Chronic Uterine Inversion Produced by Submucous Fibroid," *New Orleans Medical and Surgical Journal*, June, 1895. Married, in 1889, Mrs. Irene M. Gates, of Mobile, Ala. They have no children.

EWING, Calvin K., of Indianapolis, Ind., was born in Bloomington, Ind., September 23, 1861, and at an early age moved to Indianapolis, in which city he attended the common and high schools and later the Butler University; subsequently entering the Medical College of Indiana, from which he was graduated in 1884. For three years he practiced at Malott Park, Ind.; after which he took a post-graduate course in the Medical School of New York, which was supplemented, in 1887, by investigations in the schools and hospitals of London, Paris, Berlin and Vienna, devoting himself assiduously to the study of the methods of treatment of the most eminent physicians and surgeons of those cities; giving special attention to diseases of the nose, throat and lungs. In the meantime he had applied himself to the subject of electrical therapeutics, which led to his inventing devices for the beneficial application of electricity, and resulting in phenomenal success in his practice. Dr. Ewing is treasurer of the American Association of Physicians and Surgeons, and attending physician in charge of the Nose, Throat and Lung Department of the Indiana Medical Hospital; also, Professor of Clinical Medicine at the American Medical College of Indianapolis, where he is deemed a very successful teacher, with broad and liberal ideas. He is medical examiner for a large number of prominent life insurance companies and fraternal organizations. He has identified himself with orders, as the I. O. O. F., K. of P., K. of M. and is High Physician of the Independent Order of Foresters for the State of

*Calvin K. Ewing.*

Indiana and is Supreme Medical Director of the Order of United Toilers.

**BAXTER**, Edward K., of Boston, Mass., was born February 3, 1840, at Barton, Vt., of English descent, some of his ancestors serving in the Colonial and Revolutionary wars. He was the youngest in a family of seven children of Harry and Deborah Steele Baxter, and a grandson of Elihu Baxter. After the death of his father he went to Sharon, Vt., to live with an uncle in March, 1853, and in that town he passed a large part of his life. He was educated in the common schools and at Kimball Union Academy, Meriden, N. H. Never very robust in health, he gave up his cherished plan of collegiate course, this lack being supplemented in after years by extensive reading and study. He commenced the study of medicine in the year 1860, with Drs. Dixi and A. B. Crosby, of Hanover, N. H.; attended three courses of medical lectures at Dartmouth Medical College

*Edward K. Baxter.*

and one at the College of Physicians and Surgeons in the city of New York, and was graduated at Dartmouth Medical College in 1864 with high honor. Professor A. B. Crosby, with whom he studied, said, "His examinations and medical thesis were wonderfully fine." Dr. Baxter was assistant physician at the Hartford (Conn.) Retreat for the Insane, and at Sanford Hall a well-known private asylum for the insane at Flushing, L. I. Dr. J. W. Barstow, long resident physician at Sanford Hall, with whom he was associated a few years after his graduation, writes: "My acquaintance with Dr. Baxter began when he was very strongly recommended to me by Professor A. B. Crosby, as my assistant at Sanford Hall. I recollect Dr. Crosby's very warm commendation of his career as a student, his standing in his class and the excellence of his medical thesis. He acted as my assistant for one year and proved

all that Dr. Crosby had so confidently warranted. In addition to his medical acquirements he had much literary taste, read the best authors and was familiar with their best works. His nature was one of innate refinement and delicacy. He was ever neat, painstaking and exact. He was always patient and cheerful, of genial manner, and a strain of delicate humor characterized both his conversation and his correspondence. Dr. Baxter was a man of high christian character and standing, never obtrusive, but earnest and consistent. He was a man whom I always esteemed and whom I shall delight to remember. Such lives as his are an inspiration to us all, and we feel that the world is better that such men have lived. Dr. Baxter was a man not to be easily spared by his family and by the profession, but, however greatly his loss may be felt by us, that the change is gain to him I can not doubt." Dr. Baxter was obliged to give up very active practice on account of his health, with high aspirations and an ardent love for his chosen profession; this was a sore disappointment, but was borne with patience and hopefulness. Returning to his home in Sharon, and not being dependent upon the practice of his profession, he was enabled to devote much time to reading and study, especially to the latest and best medical periodicals and works, thus keeping abreast of the times in that science, and by favoring his health, he was able to do much practice for many years. His professional ability was held in the highest esteem, and his services were in greater demand than he was able to meet. He attained a high degree of accomplishment in the sciences, as well as in his profession of medicine and surgery. His contributions to medical literature were confined to occasional articles in the medical journals. He was a member of the Vermont Medical Society and of the American Medical Association. From the obituary sketch, written by A. B. Bisbee, M. D., of Montpelier, Vt., and read before the Vermont Medical Society: "Dr. Baxter apparently entered the medical profession because of his love for it. As a student he was enthusiastic, painstaking and showed marked ability. That he appreciated the importance of thorough preparation is evidenced by the fact that he extended his studies over a period of several years, although the medical college requirements at the time were only two years of study and attendance upon two courses of lectures (Dr. Baxter having attended four). His graduating thesis on cystitis was considered a highly meritorious effort. Dr. Baxter was emphatically a student outside of medicine; he was most interested in the natural sciences, ornithology, mineralogy and especially botany. In the latter science he attained a degree of skill surpassed by but few in his native State. He was also an expert microscopist. For books he had a genuine love. Possessed of much literary taste and the means to gratify it, he surrounded himself with the best works of the best authors, and from them he derived the keenest enjoyment. As a citizen, Dr. Baxter was a conspicuous man in his community. He was a worker and a leader. Any project which promised to better the condition of his fellow citizens received his liberal support. He was an intelligent physician, admirably equipped by natural endowment and by education for a successful career in medicine. As a man he was noble, broad-minded, warm-hearted." Dr

Baxter was actively interested in the political, educational and religious interests of the town. He was Superintendent of Schools, chairman of the Republican Club for many years. He represented the town in the General Assembly in 1886. Though in no sense an office-seeker he felt it his duty to render such public service as his strength would permit, and the various important public trusts to which he was called were executed creditably to himself and to his townsmen. Dr. Baxter was fond of agricultural pursuits, superintending his farm in Sharon a few years. He was keenly susceptible to the beautiful in nature and art, so his resources for enjoyment were very great. In his own words, "I thank the Lord for every day I am permitted to live in this beautiful world." He was a man of large sympathy and benevolence. A helper of the poor and unfortunate, extending to the humblest of God's creatures, the dumb animals, for whom he had a great love and pity. He was a warm friend of the Massachusetts Society for the Prevention of Cruelty to Animals and one of its vice-presidents. In the last few years of his life large business interests and trusts came into his hands, which could not be easily cast off, so they were entered into with the same conscientiousness and much of the enthusiasm which characterized his other pursuits. About four years previous to his death he withdrew from the practice of his profession on account of his health and the pressure of other business. A most marked feature in Dr. Baxter's life and character was his beautiful christian faith and his conscientious stewardship of the gifts, considered by him as committed to his care by God, this spirit irradiating his daily life, and flowing forth in beneficent interest for religious, philanthropic and educational work abroad, as well as at home. He was a Congregationalist, and for many years acted as clerk and treasurer of the church, and its most liberal supporter. In the words of one of his pastors, "He was a tower of strength in our church and always ready to help every good cause." He was a life member and constant contributor to various benevolent and humane societies. He gave largely, but not in an ostentatious way, so quietly that in many instances only the recipient knew of his bounty. Prominent among his benefactions was a gift of \$5,000 to Kimball Union Academy a few years before his death. Among his many public bequests to benevolent and humane societies in Vermont and elsewhere was a gift of \$5,000 to the Mary Hitchcock Hospital, Hanover, N. H., for the endowment of a free bed. An eminent Boston physician, who attended him, writes of him as he knew him during his last illness: "As a physician Dr. Baxter seemed to grasp every subject presented to him with great vigor, cause and effect were weighed with great clearness, and all the pathological conditions considered with great care. He possessed a mind well-trained by years of careful study, and was unusual for its strength and clearness." In his last weeks of weariness and suffering, following with the eye of a physician all the pathological changes in his case, patient, gentle and thoughtful of others to the last. It has been truly said, "As a physician he was skillful and accomplished. His character was pure and upright, his devotion to noble purposes and his benevolence constant." Dr. Baxter spent a large part of the last three years of his life in Boston, where he died at his beauti-

ful winter home on Beacon street, May 22, 1896. In 1880 he married Miss Sarah L., daughter of Colonel Gardner and Susan Steele Burbank, who survives him.

DUFFIELD, Alfred Manley, of Huntsville, Ala., was born May 18, 1859, in Dorchester District, Boston, Mass. He was the youngest son of John Duffield, formerly of Philadelphia, Pa., whose ancestors came over from England with William Penn on his second visit to America. Graduating from the Dorchester High School in 1878, he accepted the position of Assistant Chemist at the Massachusetts College of Pharmacy, where he remained a year. From 1879 to 1882 he was connected with the Jackson Sanatorium at Dansville, N. Y. After a three-years' course of instruction at the Boston University School of Medicine, he received his diploma and degree of M. D. in 1885. During

*A. M. Duffield.*

vacations all clinical opportunities were eagerly sought, the summer of 1883 being spent as assistant in the Surgical Department of the Boston City Hospital, that of 1884 by taking the practices of Dr. Alfred Salls, of Quincy, Mass., and later that of W. C. Shatton, M. D. (his preceptor), during their respective vacations. Immediately after graduating Dr. Duffield located at Old Orchard Beach, Me., where he soon had the largest practice at that famous resort. In the fall of 1885 he located at Mobile, Ala., after having passed a most rigid examination by the board of medical examiners of that place. In less than a year his success was so great that he broke down from overwork, and was obliged to seek the benefit of the piney woods of Citronelle, Ala., where he was located for the next four years, excepting summers, which were spent at various health resorts, both North and South, in trying to free himself from the grasp which pulmonary tuberculosis had upon him. During this time he was the victim of thirty-nine hemorrhages from his left

lung, and at one time was reduced to nearly 100 pounds in weight. During this time he officiated as resident physician at Pleasant Point House, Green Lake, Wis.; the Mexican Gulf, at Pass Christian, Miss.; the Old Orchard House, at the beach of the same name, in Maine, where he spent two seasons, and at Portersville, Ala. He located at Huntsville, Ala., in December, 1890, and has made that his permanent location since, being entirely free from pulmonary trouble and weighing about 150 pounds. He attributes his recovery to the climate of Citronelle, Ala. Dr. Duffield was the founder of the Alabama Homeopathic Mutual Association, in 1890, of which he is now president. He is serving his third term as treasurer of the Southern Homeopathic Medical Association, of which he is an ex-vice-president. For two years he has been honorable vice-president of the American Institute of Homeopathy, and was a delegate from that body, as well as from the Southern and the Alabama State associations to the International Homeopathic Congress of Physicians, which met at Queen's Hall, in London, Eng., in 1896. He made a tour of the continent in that year, in company with several other physicians from the United States. In 1893 he was one of the advisory council of the World's Congress of Climatology, representing the State of Alabama, at Chicago, at that meeting; also representing his State at the World's Congress of Homeopathic Physicians and Surgeons, held at the same time. The Doctor is a member of the American Health Resort Association and the Knights of Pythias, of which he is the medical examiner. He is a past grand Odd Fellow, past chief patriarch of the Encampment and past grand of the Rebekahs. He is an ex-deputy supreme chief of the Knights of the Golden Eagle of Alabama, and is connected with several other secret and charitable organizations. In June, 1897, he was elected president of the United States board of pension examining surgeons, located at Huntsville, Ala. During his first seventeen months' practice at Huntsville, Ala., he did not lose a single case by death, although he prescribed over 3,000 times during that period, a number of cases having been pronounced beyond a chance of recovery by consultations of the most eminent medical men of the town. He is especially successful with respiratory troubles and diseases of women and children. Dr. Duffield married Mrs. Isabel G. Leibby of Boston, Mass., on December 31, 1896. The Doctor is a frequent contributor to the medical press, and his articles are always well received.

BARR, G. Walter, of Keokuk, Ia., son of Dr. J. C. and Kate (Doll) Barr, was born in Medway, Ohio, October 25, 1860. His paternal ancestors settled in Pennsylvania early in the history of the commonwealth, while his mother's genealogy has been preserved through a Virginia family since the seventeenth century. At an early age he was taken by his parents to Lawrence county, Illinois, and there lived upon a farm until his twentieth year. In the meantime, after preparing at a high school, he attended Asbury, now DePauw University, Greencastle, Ind., and after attaining the junior class there, he accepted the city editorship of the Columbus, Ind., *Evening Republican* in 1880. After serving one year in this capacity, he began to read medicine with his father; attended one course of lectures, each, at

the Rush Medical College, Chicago, and the Jefferson Medical College, Philadelphia, receiving his degree from the last named, in 1884, and immediately entered upon the practice of medicine at his old home, Bridgeport, Ill. In 1890, Dr. Barr was elected Professor of Hygiene and State Medicine in the College of Physicians and Surgeons, Keokuk, Ia., and in the spring of 1891 removed to that city and formed a partnership with Dr. J. C. Hughes, dean of the college. In 1891 he was elected to the chair of *Materia Medica* and Therapeutics, and since 1893 has been secretary of the faculty, College of Physicians and Surgeons. Dr. Barr made a study of the physiological action of antipyrine and acetanilid (antifebrin), published in the *Therapeutic Gazette*, June, 1887, *et seq.*, and this article was extensively reprinted in this country, in Germany and England, and received the attention of the Glasgow meeting of the British Medical Association. Later he published a number of articles in the *Therapeutic Gazette* and the *Medical and Surgical Reporter* upon the therapy-physiological action and comparison of these drugs. In March, 1895, he published in the *Therapeutic Gazette* a lengthy study of idiosyncrasy in relation to drugs, and the same year became editor of the Department of *Materia Medica* and Therapeutics in the *Iowa Medical Journal*. Reports of researches upon pilocarpine and other drugs have appeared from his pen at different times. Dr. Barr is a member of the Iowa State Medical Society, and at its meeting in 1893 made the report upon pharmacy and therapeutics; member of the Pathological Society of Keokuk, of the Illinois State Pharmaceutical Association, of the American Medical Association, has been attending physician to the Mercy Hospital since 1891 and consultant on the staff of the Keokuk Dispensary since 1891. In 1888 he drew the sanitary ordinance of Bridgeport, Ill., and was the first health officer of that town. From 1888 to 1891 he was a member of the board of United States examining surgeons at Lawrenceville, Ill., from its organization in 1889 until his removal to Iowa in 1891, and was secretary of the board during that time; was surgeon of the Illinois division, Sons of Veterans, in 1890; is a member of Masonic orders, the Beta Theta Pi Greek society, Knights of Pythias and other secret societies. Married, in 1884, Miss Annabelle Applegate, of Lawrence county, Illinois. Their children are Lawrence A. and Nannie Clarke Barr.

WOODARD, Nathan Douglas, of Indianapolis, Ind., was born near Coloma, Park county, Ind., September 30, 1849, of American parents of English descent. His father, Silas H. Woodard, was by occupation a farmer. His mother, Emily (nee Allen) was a daughter of Solomon Allen, a prominent Quaker and citizen, and one of the pioneers of Indiana, who died in 1893 at the advanced age of ninety-six years, on the farm in Park county that he entered from the government. The subject of this sketch was educated in the common schools and at Bloomingdale Academy, in his native county. He began the study of medicine in 1877, under the preceptorship of Dr. Daniel Cary, of Carmel, Ind., a prominent physician of that vicinity, and with whom he remained two years. He was graduated from the Physio-Medical College of Indianapolis, and in 1879 was regarded as the most proficient anatomist of his class, and obtained 100 per cent. in the grade of his exam-

nation. He then located at Coloma, his native own, and engaged in the practice of his pro-

*Nathan Douglas Woodard.*

feffion, where he remained three years. He then located at Richmond, Ind., where he entered into partnership with Dr. C. N. Harrold, of that city, and succeeded in obtaining a large and profitable clientele, but the following year he was appointed to the position of Demonstrator of Anatomy in his alma mater, and removed to Indianapolis in 1883, where he has been engaged in a large and successful practice ever since. In 1884 he was elected to the chair of General and Descriptive Anatomy, which he held four years, and was then elected to the chair of *Materia Medica* and Therapeutics, which position he has filled ever since. Dr. Woodard has been Dean of the Physio-Medical College since 1893. He is a general practitioner of medicine and surgery, but has given especial attention to diseases of women, and has been quite successful in this line of practice. He has been a member of the Indianapolis Physio-Medical Society since 1883, a member of the Indiana Physio-Medical Association since 1879 and a member of the American Association of Physio-Medical Physicians and Surgeons since its organization. He is also a K. of P., and has served several years as medical examiner of Indianapolis Lodge, No. 56, of that organization, which is the largest in the State. He has written numerous articles for the *Indiana Physio-Medical Journal* concerning questions of professional interest. Dr. Woodard married in 1875 Ellen Cary, daughter of Lemuel Cary, of Carmel, Ind., who died in 1876, and he was married the second time in 1879 to Mary C. Newsom, of Azalia, Bartholomew county, Ind. They have two daughters, Mary Ethel and Grace Myrtle Woodard.

McLEOD, Angus J., (deceased), of Columbus, Ind., was a native of Montgomery county, North Carolina, and was born August 9, 1827. Paternally he was descended from Scotch ancestry,

his father, William McLeod, having been born in Scotland in the year 1801. Immigrating to the United States in the year 1802, the McLeod family located in North Carolina, from which State, in 1830, William McLeod moved to Indiana and settled in Hendricks county, where he died in June, 1884. The mother of Dr. McLeod, whose maiden name was Jane Benton, was born in North Carolina in the year 1800, and died in Hendricks county, Indiana, in 1872. Mr. and Mrs. McLeod were the parents of seven children, the Doctor being the oldest of the family. Dr. McLeod, when three years old, was brought by his parents to Hendricks county, Indiana, where he spent the days of his youth and early manhood. Amid the active labors of the farm, in those pioneer days, he received an excellent physical training, and such mental culture as was attainable in the common schools of the times, which he attended at intervals for several years, obtaining a good English education. He subsequently became a student in the Danville Academy, in which institution he completed the prescribed course, graduating in 1848. In 1849 he began the study of medicine in the office of Dr. Joseph A. Martin, at Northfield, Boone county, Ind., and in 1861 graduated from the College of Medicine and Surgery, at Cincinnati, Ohio. Upon the completion of his professional studies the Doctor located in the practice of his profession at the city of Lebanon, Boone county, Ind., where he continued in the enjoyment of a lucrative business till the year 1867, when he moved to Burnsville, Bartholomew county, Ind. During several months of 1862 the Doctor spent the time in the camps of the Union troops in the field as a contract surgeon, and many are the veterans who remember the kindly attention of Dr. A. J. McLeod as he moved among them, as a good Samaritan, administering to their relief during the memor-

*Angus J. McLeod.*

able siege of Corinth, Miss. From 1867 till 1884 he remained at Burnsville, in the control of a

business which, for magnitude and variety in the lines of medicine and surgery, has been seldom, if ever, equaled by the experience of any other practitioner in the State. In the year 1884 he came to Columbus, Ind., where he at once took rank with the very best physicians and surgeons of the city, a distinction he steadfastly maintained until his death. Dr. McLeod had a continued experience in the practice of his profession for the period of forty-five years, advancing to the highest grade of his calling among his cotemporaries in the profession and the people whom he had served, always evincing consummate skill and professional ability, embellished with a kindness of heart and gentility of deportment, which unlocked every door where humanity suffered or polite society congregated. His services in camp gave him opportunity to study the inception of those diseases to which the soldiers were exposed, and from which study and subsequent practice he had become an expert in the treatment of old soldiers. He was a member of his County, District and State Medical societies. The Doctor was a Mason, having attained the rank of Knight Templar. In politics he was a Republican and religiously a Baptist. In closing this sketch it is but proper to add that Dr. McLeod had so conducted himself throughout his long and eventful services of the people, in honesty, integrity and dignity that he held the highest esteem of every one who knew him, and, like all good men whom the people love, the name "Angus J." designates many a favorite son of a hopeful Hoosier mother. In 1852 he was united in marriage with Miss Emily Dye, of Boone county, Indiana, from which union eight children have been born, six now living and two dead. The living are Belle, Linnie, Lowell B., William N., Ollie and Harry H. Laura and Jennie are deceased. Dr. McLeod, at the age of seventy years, died very suddenly in Columbus, Ind., on June 4, 1898, from an attack of angina pectoris.

HEATH, Frederic Carroll, of Indianapolis, Ind., was born in Gardiner, Me., January 19, 1857. His father, editor and publisher of the *Gardiner Home Journal*, was killed at the battle of Fredericksburg, the Grand Army Post at Gardiner being named in his honor. His grandfather was a physician of wide reputation in the State of Maine. Dr. Heath prepared for college in the schools of Gardiner, and graduated at Amherst College in 1878, receiving the degree of A. M. a few years later. At the close of junior year he won the Hutchins prize for best examinations in the Greek of sophomore and junior years, and was appointed to Phi Beta Kappa Society for high general rank. After teaching a few years as principal of Granby High School, Gardiner Grammar School and Washington Academy he entered the Medical Department of Bowdoin College, graduating in 1884, at the head of his class and delivering a valedictory address that was published in whole or in part in some of the leading papers of the State. The following two years he served as Steward and Acting Assistant Surgeon United States Marine Hospital Service at Portland, Me., and in 1886 became an Assistant Surgeon, ranking first among a large class of applicants before the Examining Board at Washington, D. C., and serving at Chicago, Mobile, Buffalo, Cleveland and Detroit. In 1890 he resigned to enter upon the practice of his specialty (eye and ear), to which

he had previously given considerable attention, taking a long course of clinical work and study in the post-graduate schools and eye and ear hospitals of New York, and locating at Lafayette, Ind., where he was soon made oculist and aurist to St. Elizabeth's Hospital. He removed to Indianapolis in October, 1891, and is now eye and ear surgeon to the City Hospital and Dispensary as well as to the Union State Hospital and German Protestant Deaconess' Hospital. He was secretary of Marion County Medical Society for two years, and has been secretary of the State Medical Society since 1896. He has read papers and made addresses before many medical societies upon the following subjects: "A Case of Aneurism of the Pulmonary Artery," "The Physician's First Indication," "Heart Tonics," "Gonorrheal Ophthalmia," "Steel in the Iris for Twenty-seven Years," "Benefits and Evils of Glasses," "The Eye in Relation to General Disease," "Hygiene

*Frederic Carroll Heath.*

of the Eye," "Conservative Treatment of Muscular Insufficiencies," "Mistaken Notions About Glasses," "Some Sequels of La Grippe," "Some New Methods of Treating Chronic Suppurative Otitis Media," "Common Mistakes in Common Eye Troubles," "Accidents in Eye Operations," "Hypermaturation Cataracts," and "The Common Use of Glasses."

HASTY, George, of Indianapolis, Ind., was born near what is now the town of Mechanicsburg, Henry county, Indiana, September 30, 1835. His grandfather, Thomas Hasty, moved from Delaware to Lexington, Ky., in the early part of this century, where his father, Thomas Hasty, was born about 1808. His mother, Ann (Raper) Hasty, was born in Virginia. She was a daughter of John Raper, a soldier of the war of 1812. Therefore, the subject of this sketch is genuinely an American. His education was acquired in the common schools of Indiana, at the time which marks the end of greased paper and the beginning of the glass window period. Dr. Hasty helped his father, a farmer, at clear-

ing up a farm in heavy timber in summer and attended the short terms of school in winter

*George Hasty.*

until 1856, when he began the study of medicine, reading such medical literature as he could get hold of until the latter part of 1857, when he entered the office of Dr. Joseph Weeks, of Mechanicsburg, with whom he prosecuted his studies until the fall of 1858, when he attended a full course of lectures in the Physio-Medical College of Ohio, at Cincinnati. He continued as a student of Dr. Weeks during the summer of 1859, and attended a second course of lectures at Cincinnati in the Physio-Medical Institute, which had succeeded the Physio-Medical College of Ohio. He graduated from the Physio-Medical Institute, February 1, 1860, and returned to his old home at Mechanicsburg and practiced with Dr. Weeks for one year, and then opened an office and continued the practice at his birthplace till December 1, 1872, when he moved to the city of Indianapolis and opened an office in old Circle Hall (Beecher's old church) in January, 1873, and has continued the practice in that city till the present, October, 1898. He was elected to fill the Chair of Chemistry in the Physio-Medical Institute at Cincinnati in 1860. He did the work of that department for two sessions, and the anatomist, Professor Hastings, having died at the opening of the session in 1861, he also had the work of anatomy and physiology assigned him by the trustees and did the double work of that session. He filled the position of Teacher of Anatomy and Physiology in the institution until the session of 1867-68, when he was transferred to the Chair of Surgery in the same institution until the close of the session of 1869-70 when he resigned the work. In 1873 he was one of the organizers and incorporators of the Physio-Medical College of Indiana at Indianapolis, the first session of said college was held during the winter of 1873-74. He occupied the Chair of Surgery and was Dean of the Faculty from

1873 to 1878, when he was transferred to the Chair of Principles and Practice of Medicine, and filled that position until the close of the session of 1896-97, when he resigned the work. For twenty-one years, from January, 1875, to January, 1896, he edited and published the *Physio-Medical Journal*, a monthly periodical of thirty-two to thirty-six pages, which was devoted to the interest of physio-medicalism. He was one of the organizers of the Indiana Physio-Medical Association, May 6, 1863, and has been a member and attended every meeting thereof till the present time. He was one of the organizers of the First District Physio-Medical Association of Indiana, the organization having been effected January 21, 1865. He assisted in the organization of the Indianapolis Physio-Medical Society and is still a member of the same. He was one of the organizers of the American Association of Physio-Medical Physicians and Surgeons, which is the national organization of Physio-Medicalists, organized May 2, 1883, and was its first president, and has attended every session thereof except one. He has been a teacher in his branch of the medical profession for thirty-seven years. He has done a general practice, medical and surgical since March, 1859, to October, 1898, with but two vacations of three weeks each, and is now in a better physical condition for the work than he has been at any time during that period. He believes in and practices strictly in accordance with physio-medical principles. Dr. Hasty was married to Caroline M. Julian (a cousin of Hon. George W. Julian), April 25, 1861. No children.

LONG, Henry, of Indianapolis, Ind., was born of German-English parentage, February 24, 1839, in Rush county, Indiana. He attended the district schools; took his academical course at Morristown, and completed his literary edu-

*Henry Long.*

cation at Farmer's College, College Hill, Ohio. From early boyhood up to this period in life

his mother had kept constantly portrayed before his mind the profession of medicine, and never ceased to exert her influence in urging and persuading him to make that his life calling. He read medicine for a long time in the office of Dr. H. Snizer, his uncle, at Middletown, Ill. From thence he entered the Eclectic Medical Institute of Cincinnati, Ohio, where he remained until his graduation, February 28, 1862. He located at once at Manilla, in his native county, and soon enjoyed a lucrative practice. The Civil War was in full blast, and as a manifestation of his loyalty and love of country he enlisted in the Federal Army. In 1864 he located in Shelbyville, Ind., where he soon secured an enviable and successful practice, and during that year through his influence the Indiana Eclectic Medical Association was organized, and he was elected its corresponding secretary, and in 1870 he was elected president of the association. In 1876 he removed to Indianapolis to review his medical studies and entered the Medical College of Indiana, and graduated in the Medical Department of Butler University, February 28, 1879. In 1880 business seemed to require his presence in Terre Haute, where he remained until 1885, when he was elected to the Chair of Principles and Practice of Surgery in the Eclectic Medical College of Indiana. He returned to Indianapolis and occupied that position until the close of the college. In 1885 with the assistance of a few friends he established the Eclectic College of Physicians and Surgeons of Indiana, and was elected Professor of Surgery and Dean of the Faculty, positions he held during the entire existence of the college. He resides in Indianapolis and is engaged in an active business, having been in the continuous practice for more than thirty-six years.

WESLEY, Allen Alexander, of Chicago, Ill., son of Edward Edrington and Elizabeth Ann (Davis) Wesley, grandson of William Edrington Wesley, was born September 25, 1856, at Dublin, Ind. He was educated in the common schools of Cincinnati, at Bryant and Stratton's Business College, Chicago, and was graduated A. B. from Fisk University, Nashville, Tenn., in 1884. He commenced the study of medicine in 1870, with Dr. William Mussey, of Cincinnati, and later under the preceptorship of R. N. Isham, M. D., of Chicago; took a three-years' course at the Chicago Medical College, now Northwestern University, Medical School, and received the degree of M. D. from the same in 1887. Dr. Wesley has been a practitioner in Chicago since the year of his graduation. He was a tutor in mathematics and Latin in Fisk University from 1878 to 1883, clinical assistant to the late Walter Hay, M. D., LL. D., in the Department of Mental and Nervous Diseases, Chicago Medical College, from 1885 to 1889; clinical assistant of Prof. R. N. Isham, in the Department of Surgery of the same college, from 1886 to 1888; has been lecturer on "Surgical Emergencies" in Provident Training School, district county physician for Cook county in Chicago, and is president of the American Union Club of Chicago. Dr. Wesley has also been Gynecologist to the Provident Hospital, of which he was one of the founders, since 1891, and was appointed surgeon-in-charge in 1894. Dr. Wesley is a member of the Chicago Medical Society, the American Medical Association, and is an Odd Fellow and a Mason. Unmarried.

WISHARD, Joseph M., of Greenwood, Ind., was born in Johnson county, Indiana, January 1, 1828, and is of Scotch-Irish parentage. He was raised on the farm, receiving a common school education. Arriving at the age of maturity he attended Wabash College, two years after which he commenced reading medicine with his brother, William H. Wishard, M. D., now of Indianapolis. He attended his first course of lectures at Rush Medical College in Chicago, Ill. His next course was in the Medical College of Ohio, from which he graduated in March, 1857. After practicing medicine for eighteen months at Rocklane, Ind., he returned to Greenwood and attended another course of lectures in the Ohio Medical College. He has taken the *ad eundem* degree in the Indiana Medical College in 1877, was appointed assistant surgeon of the Fifth Indiana Volunteer Cavalry in October, 1862, promoted to sur-

Joseph M. Wishard

geon October, 1863, and continued in the service until the regiment was mustered out in June, 1865. While Dr. Wishard was in the Federal army he was present in many battles and skirmishes, and was at one time made a prisoner of war and paroled. Since the war he has been engaged in the general practice of medicine and surgery. Something may be known of his standing in the community by his remaining in practice in the same locality for forty years, and of his standing with the profession by his being president of the Johnson County Medical Society, which position he now holds.

CARHART, John Wesley, of LaGrange, Tex., son of Daniel S. and Margaret (Martin) Carhart, grandson of Daniel Carhart, was born June 26, 1834, in Coeymans, N. Y. He was educated in the Charlotteville (N. Y.) Union Seminary, and commenced the study of medicine under the direction of Dr. Timothy Childs, of Pittsfield, Mass.; attended one course of lectures at Berkshire Medical College, Pittsfield,

Mass., and two courses at the College of Physicians and Surgeons of Chicago, from which latter institution he was graduated in March, 1883; also took a post-graduate course at the New York Polyclinic in 1884. Dr. Carhart practiced medicine for a time in Oshkosh, Wis.; was located at Lampasas, Tex., until May, 1894 (ten years), when he removed to LaGrange. Dr. Carhart is a member of the Northwest Wisconsin Medical Association, Texas State Medical Association, chairman of the Section on General Practice, 1894-95; chairman of Section of Obstetrics and Diseases of Children, 1890-91; American Medical Association, Austin District (Tex.) Medical Society, Mississippi Valley Medical Association, was one of the assistant secretary-generals of the First Pan-American Medical Congress, is a member of the executive committee for the Second Pan-American Medical Congress, member and late corresponding secretary of the Shakespeare Club, Lampasas, Tex., and was physician for Lampasas county, Texas, 1887-90. Prior to the study of medicine, Dr. Carhart entered the ministry of the Methodist Episcopal Church, 1854, and joined the Troy Annual Conference. He remained a member of the conference for seventeen years and a half, was transferred to the Wisconsin Conference in 1871, and in 1876 was appointed presiding elder of Appleton District, serving as such four years. During this period a personal difficulty arose between him and another member of the conference, and after a thorough vindication Dr. Carhart withdrew from the ministry, and membership of the Methodist Church, and united with the Presbyterian Church, in which he has been a ruling elder and delegate to the general assembly. The degree of D. D. was conferred upon him by the Masonic University of Kentucky in 1861. In literary work, both secular and medical, Dr. Carhart has written: "Sunny Hours," a volume of poems, 1859; "Poets and Poetry of the Hebrews," 1865; "Four Years on Wheels," 1880; "Nina Harding," a story of Wisconsin life, 1879; "The Sign Rider," a story of Ranch life in Texas; "The Unknown Quantity," a novel; a "Review of the Poems of Torquato Tasso," *Ladies' Repository*, Cincinnati, Ohio, 1857; "Colpomyotomy," "Puerperal Eclampsia," *Daniels (Texas) Medical Journal*; "Ether per Rectum," 1884; "Ulceration of the Womb," 1884; "The Disposal of Human Excreta," 1884; "Child Bearing and Modern Civilization," 1890, *Courier Record of Medicine*; "Carbolic Acid in the Treatment of Carbuncle," *Journal of the American Medical Association*, 1886; "The Loco Weed," *Medical Record*, New York, 1886; "Carbuncle," 1886; "Irritation of the Spinal Cord," 1887; "Spina Bifida," 1887; "Silicate of Soda Splint, Fixed Bandage," 1888; "Tyrotoxicon and Peptotoxine," 1889; "Necessity of the Special Study of the Medicine and Hygiene of Infancy," 1890; "Substitution of Cheap Pharmaceuticals in Filling Prescriptions," 1891; "A Step Backward, or the Legal Control of Marriage," 1891; "Report of Case of Brain Surgery," 1892; "Memorial Address," 1892; "Address," as chairman of the memorial committee, 1894; "How to Prevent the Spread of Typhoid Fever," 1894; "Transactions of the Texas State Medical Association," "Digitalis in the First and Second Stages of Pneumonia," read before the American Medical Association, Washington, D. C., 1891; "Sanitary Disposal of the Dead," Mississippi Valley Medical Association,

1892; and "The Physician's Chief Wealth is in What He Gives, not in What He Gains," *Courier Record of Medicine*, 1886. Dr. Carhart is the author of "Norma Trist," a novel recently published. He was married in 1857 to Miss Theresa A. Mumford, of Richmondville, N. Y. Their children are: Minnie T., Matilda, Edward Elmer, Nina B., Charles Wheeler, Agnes Goad, Hallie Rogers and Ethel Carhart.

CULVER, Dudley Mann, of Indianapolis, Ind., was born in that city April 20, 1854. He is of English descent, and his ancestors were among the first families of Kentucky, his uncle, Dr. Ambrose Dudley Mann, being a minister to France under President Pierce. The subject of this sketch received his preliminary education in the common schools of Indianapolis, and also attended the High School and Butler University of that city. In 1872 he be-

Dudley Mann Culver.

gan the study of medicine when quite young under the preceptorship of Dr. Nathaniel D. Cox, of Spencer, Ind. He attended lectures at the Indiana Medical College, graduating with honors at that institution in 1874, and was the youngest member in one of the best classes that has ever hailed from that college. After he had received his medical degree he formed a partnership with an old and experienced physician, Dr. Harris, of Ellettsville, Ind., remaining with him two years. Finding it an unprofitable field on account of the scarcity of money, he then located in Carpentersville, Putnam county, Ind., where he remained engaged in a successful practice from 1876 to 1881. Dr. Culver then removed to Whitesville, Montgomery county, Ind., and was located there from 1881 until 1887. This field being too narrow, he then located at Waynetown, in the same county, where he met with the success his ambition demanded, and remained in that place until 1895, when his physical strength forbid him doing a country practice longer, and he re-

moved to the city of his present residence, locating on the south side, where he has builded a substantial general medical practice. In the pursuit of his profession the welfare of his patients rather than financial reward has been the doctor's chief aim, and it should be understood that the service he renders is not for his own health, but that of his patients. During the last four years Dr. Culver, while engaged in general practice, has given special attention to diseases of the nose and throat. He was appointed United States examining surgeon for pensions during President Cleveland's last administration, and served three years in that capacity on the examining board at Crawfordsville, Ind. Being a firm believer in the dissemination of knowledge gained by active bedside experience, he has been a frequent contributor to the medical journals of the country, and especially the *Obstetrical Gazette* of Cincinnati. Dr. Culver is a member of the Christian Church and Masonic order, member of the Order of Red Men and Knights of Pythias, and a member of his County and State Medical societies. He is also medical examiner for the Indiana State Life Insurance Company, the Covenant Mutual of Illinois and the Bankers' Life Insurance Company of California. In April, 1898, Dr. Culver received the nomination of coroner of Marion county at the Democratic Convention, and it is generally considered that he will be elected to that important office by a handsome majority. In 1875 Dr. Culver was married to Mary Strong, of Spencer, the adopted daughter of the Hon. George W. Moore, of Owen county, Indiana. Their children are Effie, Guy and Mason Culver.

**BENCE, George Worth**, of Greencastle, Ind., was born in Jefferson county, Kentucky, November 11, 1846, moved with his parents to Putnam county, Indiana, in 1853; was raised on a farm and received only a common school education. Began the study of medicine with Dr. John Wilcox, of Greencastle, Ind., in 1869, and graduated from the University of Virginia, in June, 1871. He soon after located at Carbon, Ind., and began on a borrowed horse, an old pair of "pill bags" and a pocket case of instruments, and in debt. But he was raised to habits of industry, and went to work, and success attended him from the first. In 1874 he had become so well-known that he was nominated and elected to the Legislature, where he took a prominent part in the important legislation of that year. One of the chief laws drafted by him was the liquor license law, which was adopted and repealed the "Baxter law." He, being chairman of the Committee on Temperance, had charge of it. This law, with very few amendments, was retained twenty years on the statutes of the State. In 1878 he went to New York City and took a special course on the eye and ear under Dr. W. F. Mittendorf, and upon his return spent nine months in the office of Dr. John Green, of St. Louis, expecting to make the eye a specialty. He then removed to Greencastle, and at once entered upon a very large and remunerative practice, and his advice is sought especially in consultations in the surrounding counties. While he has not quit general practice he pays special attention to the eye and ear and in that line his clientele extends over quite a large territory. He has been successful, financially, above the average man of his age, and has accumulated sufficient to retire, but

his love of the profession keeps him at work, and under difficulties that would stagger many a worthy and ambitious man. In 1885, during a runaway, he was thrown from his buggy and suffered a compound dislocation of the left ankle joint, with fracture of the fibula. This confined him to the bed for eight months, and he still uses crutches, having an ankylosed joint and complete anæsthesia of the foot. The Doctor has been married three times. In 1873 to Kizzie C. Pratt, who died three weeks after their marriage of cerebritis. In 1876 he married Miss Libbie Loftus, who died six years later with phthisis. In 1884 he married Miss Minnie Brandon. They have two children, girls, five and six years old. The doctor does all the operations on the eye and ear, and has also done most of the major operations in surgery. He has one of the largest libraries and

*George Worth Bence*

the best appointed office of any physician in the State. He has been secretary of the county board of health since it was organized in 1882, his term being only equaled by one other in the State, viz.: Dr. Hibberd, of Richmond.

**CUNNINGHAM, Henry S.**, of Indianapolis, Ind., of German descent, was born in Armstrong county, Pennsylvania, September 1, 1839, and remained in his native State until eighteen years of age. His father died when he was an infant. He attended the public school, and when thirteen years of age he entered the Academy at Washington, Pa. There he remained until eighteen years of age, working his way, after which he entered grammar school at New Haven, Conn., for two years. After this he taught school. In 1862 he began the study of regular medicine with Hiram Mills, M. D., and later with Professor Starling Loving, of Starling College, Columbus, Ohio, and graduated June 30, 1865. He located at Warrington, Hancock county, Indiana, in

April, 1866. He remained at Warrington until 1869, when he located at Winchester, Randolph

*Henry S. Cunningham.*

county, Indiana, where he continued until April, 1871. From there he went to Montreal, Can., and entered the Medical Department of the University of Bishop's College, graduating April 4, 1872, receiving the degree of C. M., M. D., at the University of Bishop's College of Arts and Sciences, at Lenoxville, Province of Quebec, Can. In April of the following year he came to Indianapolis, and for two years was on the staff of Bobbs' Free Dispensary in the early seventies, Professor William B. Fletcher, M. D., superintendent. He is a member of the College of Physicians and Surgeons of the Province of Quebec, Can. He was a member of the Academy of Medicine during its existence, and a charter member of the Marion County Medical Society. He was physician to the German Protestant Orphans' Home from October, 1887, to October, 1891, when he resigned and was appointed as consulting physician, which position he still occupies. He is the author of a book entitled, "Lectures on the Physiological Laws of Life and Hygiene." He is a member of the Western Association of Writers, and has been a member of the executive committee for several years. At the annual meeting in 1893 he contributed a paper on "Man's Individuality and Responsibility." He has successfully performed laparotomy, amputations, and operated for cataract, strabismus, etc., and is a regular all round physician and surgeon.

GOTTLIEB, J. Adelphi, of New York City, son of Adolf and Caroline (Von Sonnenberg) Gottlieb, and nephew of the late Gen. Gabor Naphegyi, M. D., M. A., the eminent author and the compiler of the famous "Album of Languages," and the personal counsellor and adviser of the late Gen. Santa Anna, president of Mexico. Gen. Naphegyi was the doctor's uncle on the maternal branch of the family, he

inheriting many of the exemplary qualities of this illustrious ancestor; was born May 10, 1870, at Vienna, Austria; guided into the paths of a useful life by the fostering care of an ideal mother (died March 7, 1895), who modeled his character to a degree of excellence—physically, intellectually and morally. Benefited by the wise parental care during boyhood days, he developed into a youth of conscientious sincerity and steadfast purpose. He received his preliminary education in the public schools of New York City, then under the private tutorship of prominent divines, studying the rudiments of theology and Talmudic language; entered the New York Turner Cadets, where the foundation of his military training was received. He then took special courses at various academies, etc., in natural philosophy, metaphysics, biology and law. His collegiate education was acquired at the University of the City of New York and National University, receiving the degree of A. B. in 1890 and A. M. in 1891, and the honorary title of F. S. Sc., London, Eng., in 1891; and in the year 1895 he received the degree of Doctor of Science *magna cum laude* from the College of Higher Sciences, and in recognition of his scientific research the honorary degree of Ph. D. from the Teachers' Institute the same year. At an early age he was prepared for a medical career, "not for the remuneration he might derive therefrom, but for the noble privilege of helping human suffering." He commenced the study of medicine in 1885, under a private preceptor, and in 1887 entered the

*Joseph Gottlieb*

Medical Department of the University of the City of New York, where he attended three

courses of medical lectures, receiving the certificates of proficiency for special courses from Prof. Wm. H. Thomson in materia medica and therapeutics, Prof Lewis A. Stimson in operative surgery, Profs Wm. M. Poik and J. C. Edgar in operative obstetrics and from Prof. R. A. Witthaus in analytical chemistry; also graduated as Doctor of Medicine in 1891, National University; then attended the Cleveland University of Medicine and Surgery, receiving the degree of M. D. in March, 1893, passing the examination with the highest percentage in all subjects. Thus fitted for the practice of his chosen profession, not only prepared therefor by special education, but by natural aptitude and inborn intuition, his magnanimity, uniform kindness and candor soon won for him an enviable reputation, not only in his native city, but throughout the continent, wherever his work and ability have become known, being the recipient of many foreign distinctions. In the beginning of his career he devoted special attention to teaching, instructing medical students for their graduation examinations, and preparing physicians for the State board, hospital and army and navy medical examinations, giving particular attention to forensic medicine. He was the first to organize a special course for physicians and lawyers, instructing them in the practical principles of medical jurisprudence. This being met with the highest success, he became Director of and Professor of Forensic Medicine in the New York Medico-Legal Institute and Laboratory of Scientific Technology. He is major-general and surgeon-in-chief, commanding the auxiliary military medical corps; late instructor of ambulance corps, C. C. N. G. S. N. Y., and is an active member of most of the important medical and scientific societies, among which may be mentioned the New York County Medical Association, New York Physicians' Mutual Aid Association, Association of Military Surgeons of the United States, Medico-Legal Society of New York, International Congress of Medical Jurisprudence, 1893; Fellow of the Society of Science, Letters and Arts, of London, Eng.; American Public Health Association, American Association for the Advancement of Science, Associate of the Military Service Institution of the United States. In 1893 he was appointed honorary representative and examiner for the United States of the Society of Science of England, and in the same year he was elected honorary member of the First Battery, First Brigade, National Guard, State of New York. During the cholera epidemic of 1892 in New York, Dr. Gottlieb gave lectures and microscopical exhibitions of *bacillus cholerae Asiatica* at the American Museum of Natural History, Central Park, New York. He organized the auxiliary medical corps (modeled after the volunteer medical staff corps of England), the personnel of which are physicians, pharmacists, medical students and trained nurses, who act respectively as surgeons, assistant surgeons, hospital stewards and litter-bearers, and who render aid to injured in event of epidemics and catastrophes of national importance, or in the field in times of riot or war. Since graduation the Doctor has rendered clinical services in the Department of Genito-Urinary Diseases, Chamber Street Hospital; Departments of Surgery, Laryngology and Ophthalmology, Out-Door-Poor Department, Bellevue Hospital, and in the Departments of General

Medicine, Dermatology and Gynecology in the University Medical College Dispensary. He is at present consulting physician to S. A. Rescue Home, New York City; visiting surgeon to Woman's Shelter and other hospitals and charitable institutions. In 1897 he was appointed examiner in lunacy, Supreme Court, State of New York. In the literary field he has attained high rank as a writer and author, known for his scientific exactness, candor and facile style. Among his most important works and papers are "A Youth's Reverie" (poem) New York, 1889; "An Analytical Compendium of the Medical Sciences," for use in the examination of students and as a review for physicians preparing to enter the army, navy, general hospital or State board medical examinations (in two volumes); "Trichinae and Trichinosis," published by the Society of Letters, Art and Science, of London, 1893 (prize essay); "Cosmetics and Beauty," New York and London, 1893; "Medico-Legal Status of the Military Surgeon, and Rules and Regulations for the Government of the Medical Department of the National Guard of the United States," published by the Association of Military Surgeons of the National Guard of the United States, 1893, Proceedings, vol. III; "Thiosinamine and Keloid," Maine Academy of Medicine, vol. IV, No. 3, February, 1898. Dr. Gottlieb is noted for original research, both in the field of medicine and science, having made the largest photomicrograph of the trichine showing its young in situ. As Iamatological Chemist he has experimented with a number of new drugs, the most important of which are thiosinamine, for the successful removal of fibroid tumors, keloid and cicatricial tissue, without the knife; cinerarie maritime, for the absorption of senile cataract; *passiflora incarnata*, for the treatment of hysteria, tetanus and epilepsy, being conceded a standard authority on therapeutics of drugs. Notwithstanding the responsibilities of his extensive private practice (mostly consultations) he devotes considerable time to governmental, educational and diplomatic service, finding rest from his arduous labors in the collection of antiques and curios, particularly ethnology, for which he has achieved an international reputation as archeologist.

WENZLICK, William, of Chicago, Ill., was born March 22, 1854, at Milwaukee, Wis., is the son of John and Henriette Wilhelmine (Ludwig) Wenzlick, of Austrian and German birth, respectively, grandson of Martin Wenzlick. He was educated in public and private schools, at the German-American Academy, Milwaukee, matriculated at the Hasting's College of the Law, University of California, graduating LL. B. from the same in 1885; and May 30, of the same year, was admitted to practice as attorney and counselor in the courts of the State of California; matriculated at the Medical School of Harvard University in 1885; attended three courses of lectures at this institution, and was graduated M. D., June 27, 1888. He completed a full course of study at the New York Post-Graduate Medical School and Hospital, December 13, 1888, and from August, 1892, to June, 1893, studied in the hospitals of Paris, Berlin and Vienna. Dr. Wenzlick practiced medicine in New York from September 20, 1888, to July 17, 1889; was then at Port Townsend, Wash., to April 15, 1892; and at Chicago since July 4, 1893. He is a

member of the Medical Society of the State of Washington, of the Chicago Medical So-

*William Henglick*

ciety, and of the American Medical Association, member of the Harvard Medical Alumni Association and of the  $\Phi \Delta \Phi$  Fraternity. Married, in 1881, Miss Mary Moody Power Ogilby, of London, Eng., who died November, 1892, in San Francisco, Cal., having two children, Austin, born May 18, 1882, in San Francisco, Cal., and Winifred, born February 20, 1885, in London, Eng.

HAMILTON, Samuel Newell, of Connersville, Ind., was born in Fayette county, Indiana, November 23, 1845. He is a son of Elijah and Mary J. (Smith) Hamilton, and by both parents is of Scotch descent. His father is a lineal descendant of a family line, prominent in Scottish history; his mother and White-law Reid are sister's children, and their line is traced back to the ancient Clan Ronald, of Scotland. In April, 1863, he enlisted as a private soldier in the Third Indiana Cavalry. Was present when the Confederate raider, John Morgan, surrendered to the Federal forces near Gallipolis, Ohio. He saw services in Kentucky, Tennessee, Alabama, Georgia, South Carolina, North Carolina and Virginia. In March, 1864, while an orderly at headquarters of the Twenty-third Army Corps he carried the dispatch from Bull's Gap, Tenn., to General Manson countermanding the movement on Bristol, and found the command near Jonesborough. The country being overrun by guerillas, it was a hazardous undertaking, and he received the thanks of General Manson for the faithful discharge of duty, and was kindly remembered by the general for this service many years after the war. He was with his regiment on the campaign through Georgia, and was on the memorable raid around Atlanta made by the Third Cavalry Division, under the command of General Kilpatrick. In the afternoon of the second day of this raid, near Bear Creek

Station, below Jonesborough, on the Macon Railroad, the subject of this sketch, with young Jeffries, of the same company, captured a train loaded with commissary supplies belonging to the Confederate Army, under General Hood, and turned over the same to Colonel Kline, commanding brigade. He was on the march to the sea and up through the Carolina's with General Sherman. After his return home from the army he completed his academic education at Morning Sun, Ohio. He began his medical studies in 1869 and attended his first course of lectures in 1872-73 at the Indiana Medical College, and practiced from Dr. Bobbs' Free Dispensary during the entire term. He graduated in 1875. He spent some time in his early practice on the Texas frontier in the mountain country of the Colorado River, above Austin, and later was associated in the practice with Dr. R. D. Haire, a skillful surgeon, at Schell City, Mo. For sixteen years he has been a resident of Connersville, Ind., where he has built up a large practice, and has one of the best equipped offices in Eastern Indiana. Though engaged in general practice, he gives special attention to general surgery. For twelve years he has been one of the surgeons on the Cincinnati, Hamilton and Dayton Railway. He is a member of the County, District and State Medical Societies; also, the American Medical Association and the National Association of Railway Surgeons. He is ex-United States Examiner for Pensions, and the present county health officer of the army organizations; he is a member of the Union Veteran Legion and the Grand Army of the Republic. His reading is not confined to medical subjects alone, he keeps abreast with the current topics of the time; he is familiar with the works of the most advanced

*S. N. Hamilton*

thinkers, and believes that every physician should study Darwin and Spencer for a larger

grasp and a broader generalization. He holds to the Monistic school of philosophy, and does not go beyond the things of time and sense in his search after truth.

REID, E. Miller, whose office is at Nos. 904 and 906 North Fremont street, Baltimore, is one of the leading professional men in that city, and is deservedly held in high esteem by his medical brethren and acquaintances generally. He is a native of Ohio, born near Lancaster, Fairfield county, November 15, 1844, and is a son of Thomas N. and Keturah (Miller) Reid. His father, who was a grandson of George Reid, a soldier in the war of 1812, spent his life principally in Baltimore, where he was one of the oldest real estate brokers of the city; his wife was a daughter of the late Elijah Miller, who was one of the largest real estate owners of the city and county. While he was yet an infant, the subject of this sketch was brought by his

*E. Miller Reid*

parents to their native State, Maryland. Here he received the rudiments of a thorough literary education, and in the mental discipline necessarily acquired laid the foundation for a scientific training which he has found very serviceable in later life. When sixteen years of age he began the study of medicine in the office of the late Prof. John Dunbar. Later he matriculated in the Medical Department of the University of Maryland, where he was graduated in 1864. For a few months following his graduation he practiced medicine, then, having passed the examination of the Army Medical Board, he entered the United States army as acting assistant surgeon. He was assigned to Columbia College Hospital, and later was stationed at Armory Square and Lincoln hospitals, Washington, D. C. After serving for thirteen months in the army, the Doctor established himself on the Reistertown Road, in Baltimore county, where he soon had a large practice among the wealthy residents of that vicinity,

and the operatives of the numerous cotton mills and other large works that make that suburb of Baltimore so prosperous. In 1869 he returned to the city of Baltimore, where he has since resided. He carries on a general practice of medicine and surgery, and gives particular attention to diseases of the throat, lungs, heart and nervous system. He is frequently called in consultation in these special cases. Although frequently importuned to accept chairs in different medical colleges, he invariably declined these invitations until 1888, when he accepted the chair of Physiology, Hygiene and Diseases of the Throat and Chest, in the Baltimore University School of Medicine. In that capacity he continued until 1892, when he accepted the chair of the Diseases of the Nervous System and the Throat and Chest, in the same institution. This position he still fills with honor to himself and satisfaction to others. His lecture hours are always looked forward to with pleasure, because he always has something outside of the ordinary in store for the students. As an instructor he is apt, skillful and concise. He takes great interest in medical jurisprudence, and his lectures on that subject have received most complimentary notices from the press throughout the country. His lecture, "The Application of Legal Medicine to the Exigencies of the Times," delivered before the New York Society of Medical Jurisprudence and State Medicine, November 12, 1887, was largely quoted in the press in several States. He also read a paper on "The Status of Medical Jurisprudence as Affecting the Medical Profession and Laity" before the American Medical Association in Cincinnati, Ohio, in May, 1888, which also received wide mention from the press as an excellent and strong paper. Frequently he is alluded to in papers as an "eloquent historian." On the occasion of the twenty-second anniversary of the Union Veterans' organization in Baltimore the toast, "Camp Fires," was responded to by Mark Twain, president-general. Later Dr. Reid responded to the toast, "The Army Surgeon." As may be supposed, this was a subject upon which he could speak with eloquence, for he had served in the capacity of surgeon for many months. He had been in the hospital with the sick and wounded. At the call of duty, of country and of patriotism, he had given himself to the work with all the zeal and earnestness of a vigorous manhood. With these memories ever present in his mind, he could well portray the heroism, the tender-heartedness and unselfish devotion of the medical men in the late struggle. He possesses a personal magnetism and command of language, and had his profession developed eloquence as some other professions do, he undoubtedly would have gained renown as a public speaker. His rich baritone voice has also frequently been called into requisition at musical entertainments. He is a member of the American Medical Association, and in 1887-88 was chairman of the Section on Medical Jurisprudence. He is now serving his third term as president of the faculty of the Baltimore University School of Medicine. In addition to this, he is also a member of the Medico-Chirurgical Faculty of Maryland, the Baltimore Medical and Surgical Society, the Baltimore Clinical Society and the Baltimore Medical Association. The Doctor is a man of broad and progressive views, frank and genial nature, in all his dealings honorable and upright, and as a citizen progressive and

public spirited. November 9, 1887, Dr. Reid married Miss Mary Allen, daughter of John Allen, of Baltimore. Four children were born to the union, but all are deceased.

*S. Herbert Malpas.*

MALPAS, S. Herbert, of Indianapolis, Ind., son of Henry Malpas and Harriet A. (nee Vail) Malpas, was born in Indianapolis August 2, 1868. His father is of French lineage, being a descendant of the family of Orleans, and his mother of Dutch descent. Her father and mother came from North Carolina to Indiana in 1819, are still living and are probably the oldest settlers of Shelby county. The subject of this sketch was educated in the public schools of his native city and at Butler University. In 1890 he began the study of medicine under the preceptorship of William Easterly Ashton, of Philadelphia, and attended two courses of medical lectures at Jefferson Medical College and one course at the Medico-Chirurgical College, Philadelphia, then attended the Kentucky School of Medicine, at Louisville, and graduated at that institution in 1893. In the following year he took a post-graduate course at the Hahnemann Medical College of Philadelphia, and practiced his profession in that city in 1894. He then located in Indianapolis, where he has been engaged in an active and successful general medical and surgical practice ever since, but devotes his attention largely to office work, giving special attention to dermatology and treatment of cancer. His success in the treatment of malignant affections is becoming widely known, and his patients are from all parts of the country. The doctor's office, in the Marion Block, opposite the City Library, is fitted up with all modern medical and surgical appliances, and his facilities in electro-therapeutics are not excelled in the West. He takes an interest not only in the collateral but in the occult sciences as well. He has invented an improved electrical cabinet battery that is regarded as a marvel of simplicity and efficiency. He is medical director of the North American Life and Surety Com-

pany of Philadelphia. Dr. Malpas was married to Miss Ida Bieler, daughter of Captain J. L. Bieler, June 30, 1896. They have no living children.

CLARK, James A., of Chicago, Ill., was born at DeKalb, Ill., March 20, 1861, of Irish and English descent. After graduation from high school at his native place he entered the Northwestern University in 1879 in a scientific course. Graduated in medicine from Chicago Medical College, March 25, 1885. For four years he was on the dispensary staff of the College of Physicians and Surgeons of Chicago as gynecologist and lecturer on obstetrics during 1892. During 1891 he was also on the gynecological staff in the Post-Graduate Medical School of Chicago. In 1894 he was appointed Professor of Gynecology in the Harvey Medical College of Chicago and Professor of Gynecology and Abdominal Surgery in the Harvey Hospital, which position he still maintains. He is very successful as a clinical teacher of gynecology. The records show him to have conducted the largest clinic in his specialty of any man in Chicago.

PATTON-HAWKINS, Madge, of 112 North Eighth street, Terre Haute, Ind., was born near Sullivan, Sullivan county, Indiana, August 20, 1869. She is the eldest child of Samuel and Sarah E. Patton, and is of Scotch and French descent. She finished the course in the public school at home, then attended the Indiana State Normal two years. She taught five years in Sullivan. She entered the Indiana Medical College in 1891 (under the preceptorship of Dr. L. H. Dunning, Professor of Surgical and Clinical Diseases of Women), and graduated in 1895. She was the first woman

*Madge Patton-Hawkins.*

who entered and passed the State examination for hospital positions. She did not accept the position as interne in the City Dispensary, but continued her study in surgery and diseases of women in hospital and post-graduate work un-

til June, 1897. She selected Terre Haute for her field of work and is a prominent specialist in diseases of women and children. She was married to A. B. Hawkins, who is a promising commercial man, November, 1897. She is a member of the Vigo County Medical Society.

*Thomas E. Courtney.*

COURTNEY, Thomas E., of Indianapolis, Ind., of Irish descent, was born at Danville, Ind., February 20, 1868. His preliminary education was received in the common and high schools of Indianapolis. He began the study of medicine in 1888, with Dr. Joseph Eastman as his preceptor, and began attending lectures at the Central College of Physicians and Surgeons of that city the same year, and was graduated in medicine at that institution in 1892. He then passed a successful competitive examination for the position of interne of the City Dispensary, and served in that capacity in 1892-3. He then located on the south side of the city, and was soon engaged in a successful general practice of medicine and surgery for the following five years. In 1896 he was appointed police surgeon of Indianapolis for the period of two years, and served his full time in that capacity, which afforded an excellent field for operative surgery. The doctor, while holding this office, continued in the general practice of his profession. Since August, 1898, Dr. Courtney has been located at 14 East Ohio street, where he has fitted a commodious and well equipped office with all modern appliances for the allround general practitioner. The doctor was Assistant Demonstrator of Anatomy in the Central College of Physicians and Surgeons from 1892 to 1897, and since the latter date has been Lecturer on Anatomy in that institution. He is a member of the Marion County Medical Society and is unmarried.

CHENOWETH, Cassidy, of Decatur, Ill., son of Dr. W. J. Chenoweth, was born March 28, 1848, and was graduated in medicine at the Rush Medical College, Chicago, in 1864. Intending to make a speciality of diseases of the

throat, he spent several months at the Morrell McKenzie Throat Hospital, in London. But finding, on his return from Europe, that the confinement necessary to office practice was prejudicial to his health, joined his father in a general practice, which, however, has been surgical, rather than medical. The many operations performed by the firm can not be credited to the father or son, individually, as but few of the more important operations have been done by one without the assistance of the other, the knife being handled by either of them, or by both, in the same operation, as seemed to be most convenient. They have performed most of the operations ranked as difficult and dangerous—such as ovariectomy, removal of extra uterine fetation, vaginal hysterectomy and lithotomy (left lateral and suprapubic). Both partners have done a very large consultation practice, medical and surgical. Their contributions to medical literature have been limited almost entirely to articles read before the district or State medical societies, of which they were members. In August, 1894, the partnership, which had existed for nearly twenty years between his father and himself was dissolved, and Dr. Cassidy Chenoweth spent a few weeks in the far west, but soon was attracted to Chicago, where he availed himself of the many surgical and gynecological clinics, to which acquaintances amongst the most prominent practitioners in the city invited him almost daily. This course necessarily added to his already large experience, and on his return to Decatur, after nearly twelve months thus spent, his practice was larger than ever. And the character and standing of his clientele attest his ability.

*Isaac S. Harold*

HAROLD, Isaac S., of Richmond, Ind., was born north of Indianapolis, Ind., in Hamilton county, January 1, 1852, and is of Quaker

parentage. His ancestry were of sturdy Scotch-English descent, being pioneers of the Hoosier State, and his father was a practitioner of medicine in its early days. The subject of this sketch received his early education in the common schools, after which he attended Carmel Academy and Normal Institute, and spent considerable time in teaching in Indiana and in the South. He began the study of medicine with his brother, C. N. Harold, in 1879, while teaching school, afterwards studying with Dr. J. J. Baker in 1887, and graduating from the Physio-Medical College of Indiana in 1889. After this a special study of dermatology was made. He began the practice of medicine at Westfield, Ind., and remained there until 1891, at which time he removed to Richmond and formed a partnership with his brother, C. N. Harold, making dermatology and chronic diseases a specialty. He has been Professor of Dermatology in the Physio-Medical College of Indiana since 1891; is also a member of the District, State and National Physio-Medical Association, and is still located in Richmond, in his native State, enjoying a very successful and lucrative practice, his office being at 30 South Tenth street, in that city.

PARSONS, John Solomon, of Indianapolis, Ind., was born near Derickson's Cross Roads, Wycomico county, on the eastern shore of Maryland, on the 24th day of March, 1832. He is of English descent, and his ancestors figured in the Revolutionary War for independence. With his father, John P. Parsons, and family, he came to Indiana in October, 1845, and settled near Pleasant View, Dearborn county, that State, where the youthful days of the subject of this sketch were spent. He acquired a common school education in that vicinity, and after maturity spent some time in the office of the late Dr. N. L. Isgrigg, of Milan, Ind. During 1855-56 he studied medicine with Drs. Marlow and Falconbury, of Greensburg, Ind., and in 1857 with Dr. J. C. B. Wharton, of Milroy, Rush county, Indiana. In the winter and spring term of 1858 he attended the Eclectic Medical Institute of Cincinnati, Ohio, and after this course of lectures he went south, and in the autumn of 1858 visited several localities in Western Tennessee in quest of a place to locate for the practice of medicine, but at that time the prejudice against northern men was so great that he concluded to return to Indiana, the State of his adoption, and on the 18th of April, 1860, he located in Waldron, Shelby county, Indiana, hung out his "shingle" and commenced the practice of his profession. He was very successful in his practice, and soon came to the front as a skillful physician. In 1874 he again went to Cincinnati and attended the spring term of lectures at the Eclectic Medical Institute. On the 18th day of April, 1875, he delivered an anniversary address in the M. E. Church in Waldron, in commemoration of his fifteenth year there as a physician. Rev. J. W. Dashiels, who was the pastor there at that time, responded in a feeling and appropriate manner. Soon after this Dr. Parsons removed to Indianapolis. He first settled in the southeast part of the city, but between the effects of the panic of those days, and the need of a more extended acquaintance, he did not succeed for a time. On the 20th of June, 1878, he located in the west end of the city, and since then has had his office at 613 West Washington street. On the 18th of July, 1876, letters patent were

issued to him by the United States Patent Office for a double canula douche, or female syringe. This instrument is of great utility, the principle of the device being both simple and practical. The doctor has been connected with the Indiana Eclectic Medical College, and taught chemistry during the term of 1889-90, at which term he received an honorary degree in medicine. Although seemingly prosperous, having some seventy matriculants and a graduating class of seventeen, the college collapsed at the close of that term and has not since been revived. The following year the doctor, together with Drs. Laycock, Smith, Rutledge, Adkinson and several others, obtained a charter for a new medical college, under the name of the College of Medicine and Surgery, but after one session, in the winter of 1890-91, it was thought impracticable to continue, and therefore the faculty suspended for the time being, and has never resumed. During

*John Solomon Parsons.*

his connection with this institution the doctor filled two Chairs—that of Chemistry and of Obstetrics. While engaged in the general practice of medicine Dr. Parsons has devoted especial attention to obstetrics and to diseases of women and children, in which branches he has been quite successful. On the 15th of November, 1860, he married Martha C. Shulse, daughter of Colonel Abram Shulse, of Nicholas county, Kentucky. His wife died on November 2, 1870, without any issue. He remained single until July 29, 1873, when he married Sarah R. Imes, of Owensboro, Ky., who was the widow of Isaac Imes, and daughter of Elihu P. Washburn, of Owensboro, Ky. She is still his companion.

FRENCH, James Magoffin, of Cincinnati, Ohio, is a native of the State, having been born at Iberia, Morrow county, May 24, 1858. His father, the Rev. William H. French, D. D., now of San Jose, Cal., descended from a long line of ministers of Puritan stock; his mother was Elizabeth Anne, eldest daughter of the late Dr. James Magoffin, an early settler of

western Pennsylvania, and who could boast of an equally long ancestry of physicians. The

*James F. French.*

subject of our sketch began a classical course at the age of ten in the Ohio Central College, of which his father was then president. This was, however, interrupted two years later by his removal to Cincinnati, where he entered the public schools. After another two years he entered Westminster College, Pennsylvania, and completed the classical course in June, 1878. The same institution conferred upon him the degree of A. M. a few years later. His medical education was obtained at the Medical College of Ohio, where he graduated in 1880, receiving, after competitive examination, the appointment of resident physician to the Good Samaritan Hospital for one year. In 1882 he was made Assistant Demonstrator of Pathology in the Medical College of Ohio, two years later succeeding to the demonstratorship and to the lectureship on Morbid Anatomy, both of which positions he held until 1895, when he became lecturer on the Practice of Medicine in the same institution. In 1885 Dr. French was appointed pathologist to St. Mary's Hospital, and a few years later attending physician, a position which he still holds. In 1886 he was appointed a member of the United States board of pension examining surgeons at Cincinnati. In 1892 he received the appointment of assistant surgeon to the non-partisan police force of Cincinnati, a position which he still holds. In 1890 he was chosen to conduct the *Ohio Medical Journal*, established in that year, and still serves as its editor. Among his literary work is a large number of contributions to the Reference Hand-Book of the Medical Sciences, and a chapter on "The Treatment of Diseases Due to the Animal Parasites" in the seventh volume, and one on "The

Chemical and Microscopic Examination of the Urine" in the eighth volume of the Twentieth Century Practice of Medicine, recently published. He is a member of the Cincinnati Academy of Medicine, of the State society and of the American Medical Association. Married, 1885, to Miss Alice Seipel. They have two bright, happy children, William Magoffin and Alice Elizabeth.

BANKER, Adoniram J., of Columbus, Ind., was born January 8, 1846, in Butler county, Ohio, and is the son of John Banker, a native of Ohio, of German descent, and Elizabeth Banker, nee Kearney, a native of the same state, and of Irish descent. When the doctor was but three years old, his parents moved from Ohio to Shelby county, Indiana, where he grew to manhood; he attended the common schools until his sixteenth year, when he entered Harts-ville University, where he studied for four years, reading medicine and teaching district school during his vacation; after he left school he began to devote his whole time to the study of medicine, and in 1868-69 he attended a course of lectures at the Ohio Medical College, Cincinnati, and in the spring of the year located at Clifford, Bartholomew county, Indiana, and began the practice of his profession, where he remained until 1873, when he removed to Columbus, Ind., where he now stands in the front rank of the physicians and surgeons of that city, and this he owes to his own professional ability, his integrity as a man, and his strict, close attention to his practice. In 1876 the doctor matriculated and passed an examination before the College of Physicians and Surgeons of the Butler University, from which he received his degree of M. D. In politics he is a Republican, and in 1875 was appointed Examining Surgeon for this district, but resigned to attend lectures in the Bellevue Hospital, New

*Adoniram J. Banker.*

York. He is a member of the Baptist Church; also, of the Masonic Lodge and Knights Temp-

lar. In 1879 he entered the Bellevue Hospital Medical College, where he graduated in the spring of 1880. In 1889 and 1896 he took a special course in surgery and gynecology in the Polyclinic of Chicago. In 1880 he was appointed surgeon of the Pennsylvania Railroad Company, which position he now fills. In 1891 he established the Columbus Surgical Sanitarium, located at 723 Franklin street, in that city, which institute has gradually grown and prospered. In 1890 he was elected president of the Mitchell District Medical Society. In 1897 he spent some time in the colleges of Philadelphia and New York City. In 1897 he was unanimously elected to fill the Chair of Clinical and Operative Midwifery in the Central College of Physicians and Surgeons of Indianapolis, Ind., which position he now occupies. He is a member of the American Medical Association, Mississippi Valley Medical Association, Mitchell District Medical Association, Association of Railroad Surgeons of the Pennsylvania Company and the Bartholomew County Medical Association. He was married at Clifford, January 4, 1870, to Mary H. Boyd, who was born in Philadelphia, January 31, 1848; she is the daughter of Ezekiel C. and Martha Boyd, residents of Clifford, but natives of Pennsylvania.

SPINK, Mary Angela, of Indianapolis, was born at Washington, Daviess county, Ind., upon the 18th of November, 1863, her father being Michael Urban Spink and her mother Rose Morgan. The editor has gleaned from the *Woman's Medical Journal* the following items relating to the subject of this interesting sketch: Educated at St. Simon's Academy of Washington, Ind., Dr. Spink early showed signs of the brilliancy that was to develop in her later life. As an evidence of this, at the age of fifteen the young student formulated a plan of life which shocked the sensibilities of the conservative village in which she lived. The *dreadful thing* that Miss Spink proposed was to study medicine, and this planned she set out upon the most practical way to accomplish her aim. Dr. Spink had the honor of working her way through college, the first step in the way to the end being a hospital nurse. In 1878 she became a student with Dr. W. B. Fletcher, of Indianapolis, Ind., and in 1883 Miss Spink matriculated at the Medical College of Indiana. Here she received four courses of lectures, graduating with honors March 2, 1887. The next day she began the practice of her profession as assistant to Dr. W. B. Fletcher in his private hospital for mental and nervous diseases, and continuing her work, was so eminently successful that now this hospital is fortunate enough to have Dr. Spink as part owner in it, and with supervision of its management. Recognizing the fascination of special work, where it is possible, Dr. Spink has devoted herself to the department that comes mostly to her hospital, and is considered a very skilled expert in mental and nervous diseases, and has demonstrated her skill by originating a plan of preserving the inter-cranial circulation, thereby adding largely to the study of psychiatry. Of official recognition there has been no lack, and Dr. Spink is a valued member of the Indiana State Board of Charities, superintendent of the Woman's Department of the Fletcher Hospital, and is on the staff of the City Dispensary and also of the City Hospital, both of Indianapolis, Ind. She is also a member of the American Medical Association, American Microscopical Society, In-

diana State Medical Association and the Marion County Medical Society, to all of which she has contributed excellent and pertinent papers, as well as to the *American Journal of Microscopy*, the *Woman's Medical Journal*, of which she is associate editor, and various other publications. A few years ago Dr. Spink took a post-graduate course at the Post-Graduate Medical School of New York, largely augmenting her well-stored fund of medical knowledge. Although not posing as a surgeon, Dr. Spink has done some intricate work very deftly, and among her many successful operations have been those for lacerations of the cervix uteri and perineum, and for radical cure of hernia, as well as laparotomies. The photograph which accompanies this meager sketch shows a young woman with a strong and bright face, a face that shows determination to succeed, and to succeed because success means not only much for her, but because it helps every other woman,

Mary A. Spink

not only the women of to-day, but the vast army of to-morrow, who are waiting now, learning what to do and when and where they may serve the world best. When the lives of all the early women in the profession are read and time has lent the proper perspective, there will be none more interesting than that of Mary A. Spink.

MURPHY, Reubin, of Francisville, Ind., was born February 6, 1836, in Mason county, Ohio, and is of Scotch-Irish lineage, a racial extraction that has characterized many of the most noted men in American history. The subject of this sketch studied his profession under the preceptorship of W. H. Brenton, M. D., a prominent physician of Peru, Ind., and was graduated Doctor of Medicine at the Charity

Hospital Medical College of Cleveland, Ohio, in March, 1867. The doctor then began the prac-

*R. Murphy*

tice of medicine and surgery in Wabash county, Indiana, where, during a period of more than a quarter of a century, he has had eminent success, and where he is well and widely known. Recently (October 24, 1898) Dr. Murphy located at Francisville, Ind., in which town and vicinity he intends to continue in the practice of his profession, and carries with him from the field of his former labors and achievements the indorsement and best wishes of an appreciative clientele.

BRUSO, C. Frank, of Buffalo, N. Y., son of Octave and Charlotte (Pierce) Brusso, grandson of Clark Pierce, was born May 11, 1866, at Buffalo, N. Y. He was educated in the grammar and high schools of Buffalo; commenced the study of medicine in 1883, under Dr. Lewis P. Dayton, ex-mayor of Buffalo, and Dr. John Parmenter, of Buffalo; attended three courses of lectures at the Medical Department of the University of Buffalo, from which he was graduated, with highest honors, March 1, 1887, and has practiced his profession in Buffalo since that date. Dr. Brusso is a member of the Medical Society of the County of Erie, of the Young Men's Christian Association, Railroad Department; of the National Association of Railway Surgeons, of St. Andrew's Brotherhood, of the New York Association of Railway Surgeons; is surgeon to the West Shore Railroad, Buffalo Division; was house surgeon to Fitch Accident Hospital, 1886-87; physician to Erie County Hospital, 1885-87; and to Erie County Penitentiary, 1887. He is a member of Independent Order of Odd Fellows, Patriarchs Militant, Knights of Pythias, Improved Order of Red Men, and is examining surgeon for the Man-

hattan Life Insurance Company, the Knights of Pythias and for several secret societies. Dr. Brusso is the author of a "History of Obstetrics." His office is in the Brown Building, corner of Main and Seneca streets, and at the Waldorf, 1112 Main street, Buffalo. Married, January 23, 1890, Miss Katherine, daughter of John C. and Katherine Hanbach, of Buffalo, N. Y. Their two children are, Edward Hanbach, and Katherine Brusso, who died August 30, 1894.

CLARKE, Nathan Little, of Meridian, Miss., born August 23, 1857, in Newton county, Mississippi, is the son of Nathan L. and Eveline (Powell) Clarke, natives of North Carolina, who removed to Mississippi about 1838. He was reared on a farm, and received an education at the neighborhood and high schools. Commenced the study of medicine in 1879, attended a course of lectures at the Medical College of Alabama, Mobile, 1879-80, and was graduated with honors at Louisville Medical College in February, 1883. He began the practice of medicine soon after graduation in his native county, but removed to Meridian in January, 1885. Dr. Clarke is a member of the Mississippi State Medical Association, was its secretary, 1884-85; vice-president, 1891; in 1893 was made chairman of its Section on Diseases of Children, and has several times served as its delegate to the American Medical Association, member of Lauderdale County Medical Association, its secretary 1885-88, and president in 1890. In 1891 Dr. Clarke commenced the publication of the *Mississippi Medical Monthly* at Meridian, the first and only medical publication in the State. He was made president of the board of health of Meridian in 1894, since which time he has given valuable service relating to the causes of yellow fever, and in the prevention of epidemics of this and other infectious maladies.

*Nathan Little Clarke.*

He is justly regarded as one of the most distinguished sanitarians of the South, as well as

one of the most successful physicians in his section of our country. The diseases of children have received his special attention. Dr. Clarke married, March 2, 1883, Miss Carrie A. Melton, of Meridian.

DANDRIDGE, Nathaniel Pendleton, of Cincinnati, Ohio, was born in that city April 16, 1846. His father, Alexander Spotswood Dandridge, was born at the old family homestead, "The Bower," Jefferson county, Virginia, November 2, 1819. He graduated at Princeton in 1838, studied medicine in Philadelphia, and, after taking his degree at the University of Pennsylvania in 1841, settled in Cincinnati, where he married Martha Eliza Pendleton, second daughter of Col. Nathaniel Greene Pendleton and Jane Frances Hunt, whose father, Jesse Hunt, was one of the pioneer settlers of Cincinnati, coming from New Jersey about 1789. Nathaniel Pendleton Dandridge received his early education in Cincinnati, and in 1866 graduated from Kenyon College. Choosing the medical profession as his life work, he entered immediately upon his studies in Cincinnati at the Medical College of Ohio, and going abroad in 1867, he pursued the same in Paris and Vienna. Returning to New York, he graduated from the College of Physicians and Surgeons in 1870, and immediately entered upon the practice of medicine in his native city. In 1872 he was appointed pathologist to the Cincinnati Hospital, with Dr. Mackenzie as associate pathologist. In 1880 he was elected to the surgical staff of the Cincinnati Hospital, which position he still holds. The same year he was appointed one of the professors of the Miami Medical College, and two years later, upon the death of Dr. Wm. H. Mussey, succeeded him as Professor of Surgery. He has held the positions of registrar and secretary to the college, and in 1893 was chosen and still is (1898) dean of the faculty. Dr. Dandridge has turned his attention particularly to surgery, and his ability and skill are well known to his colleagues at home and abroad. Since the organization of the Episcopal Hospital for Children, in 1884, he has been a member of the staff. Some of his best work has been done here, and by his gentle ways he has endeared himself to the little sufferers. He is a man of high principles, good judgment, strong courage and fearless in upholding the right. To those less fortunate he is ever ready to extend a helping hand, no matter what form the appeal may take. In his relations with younger men he is courteous and considerate, ready to encourage and sustain by kindly help and more mature experience those who so often need a word of sympathy or more substantial aid amid the early years of professional life. Dr. Dandridge inherits his ability as a physician, not only on his father's side, but also on his mother's, she being a lineal descendant, a great-granddaughter of Dr. John Bard, who died in 1799. He was one of the prominent physicians in those days, did much for his profession, was elected six or seven times president of the New York Medical Society, and in 1750 was present at the first recorded dissection in America. Dr. Dandridge is surgeon to the Cincinnati Hospital, Children's Hospital, consulting surgeon to Christ's Hospital and Presbyterian Hospital. He is a member of the Surgeon's Association, American Medical Association and Ohio State Medical Society, of which he was president from 1893-94. In 1889 he was president of the Surgical Sec-

tion of the American Medical Association, which met in Newport, R. I. In 1898 he was elected an Honorary Fellow of the Philadelphia Academy of Surgery.

GARSTANG, Reginald William, of Indianapolis, Ind., was born August 4, 1874, at Galion, Ohio, and is a son of William Garstang, who was born in England in 1851. The subject of this sketch received his early education in the schools of Richmond, Va., and his collegiate education at the University of Virginia. He then began the study of medicine under the preceptorship of Dr. Henry Jameson, of Indianapolis, and was graduated from the Indiana Medical College in 1896. His medical education has been supplemented by post-graduate courses in the New York Polyclinic and New York Post-Graduate School. He has been engaged in a successful medical practice in In-

*Reginald W. Garstang*

dianapolis since the spring of 1896. During the late war with Spain Dr. Garstang was a surgeon in the One Hundred and Fifty-seventh Indiana Volunteer Infantry, and he has the distinction of being the youngest commissioned surgeon in the American Army. Unmarried.

VINCENT, Edward, of Chicago, Ill., was born at Newark, Ohio, August 15, 1865. His parents are both of English extraction, the father being born in Philadelphia and the mother in Virginia. When the subject of our sketch was but a child the family removed to Springfield, Ill., where they have since resided. After graduating at the Springfield High School he received an appointment to West Point, the United States Military Academy, and entered that institution as the youngest member of his class; where he was a cadet during 1882-3-4-5. The inactivity of military life, stationed at some frontier post, was distasteful to him, so he resigned from the service and immediately matriculated at the Missouri Medical College, St. Louis, Mo. His father, Dr. John A. Vin-

cent, one of the most distinguished physicians and citizens of Central Illinois, having acted as his preceptor; and it was his ambition to follow in the footsteps of his father. Being of a studious disposition, and taking a keen delight in scientific investigation he was not satisfied with the one diploma, and the following year found him the possessor of a second diploma from Hahnemann Medical College of Chicago, Ill. He graduated with credit from both institutions, and in the latter instance received first prize for the best examination in physiology and histology. Forming a partnership with his father in Springfield, he enjoyed an excellent practice with a growing reputation until late in the summer of 1890, when he went abroad and spent a year, dividing the time between the University and Hospital of Vienna, and of Freiburg, in Baden. Returning he resumed practice in Springfield, and in May, 1892, was appointed by Governor Joseph Fifer as surgeon-general of the Illinois National Guard, with the rank of colonel. Upon the election of Governor Altgeld, for political reasons he tendered his resignation which was, of course, accepted. June 28, 1893, found Dr. Vincent on board the whaler, the steamship Falcon, acting as surgeon for the Peary Arctic expedition, and while living among the Esquimaux he made a detailed ethnological study of this interesting race of people, having a more perfect knowledge of them than any man living to-day. He was one of the party of the selected few who made the ill-fated journey with Peary toward the North Pole. This little band all but lost their lives in their devotion to science, and their thrilling adventures and hair-breadth escapes would make volumes of interesting reading matter. The expedition returned to the United States in October, 1895, and while the mysteries of the North Pole were not penetrated yet from a scientific and ethnological standpoint the venture was a decided success. Many urgent requests persuaded the doctor to enter the lecture field, telling of the Arctic regions, and his work in this direction covered eighteen months. Returning to the regular field of medicine he located in Chicago, and is enjoying a lucrative practice.

**BRUNDAGE.** Albert Harrison, of Brooklyn, N. Y., son of Dr. Amos Harrison and Sarah Mervina (Dimmick) Brundage, grandson of Parmenas Brundage, was born March 3, 1862, at Candor, Tioga county, N. Y. He attended school in his native town until eight years of age, when his parents removed to Cohoes, N. Y., where he attended school until they removed to Newark, N. J., in 1872. There he continued his education and began a drug experience. When fourteen years of age he went to live with his paternal great-uncle, a retired Presbyterian minister, on a small farm at Montclair, N. J. This uncle had, for twenty-five years, largely occupied his time in superintending the education of youths, and his sound advice and judicious influence were very helpful to his young nephew. Upon this uncle's death in 1877 he returned to Newark to school, was graduated from the public grammar school, and attended the high school for a year and a half. Upon the removal of his parents to Brooklyn, N. Y., in 1881, he entered the office of a prominent law firm in Trinity Building, New York City, where, having filed his certificate at Albany as a law student, he studied a year and a half; then, not being pleased with the study

of law and being offered a good position in mercantile life, he accepted it, but soon entered the drug business, in which he remained interruptedly for several years; he was also graduated from the Brooklyn College of Pharmacy, receiving the degree of Ph. G. In 1881, although otherwise engaged, he commenced the study of medicine with his father. By clerking in drug stores and by teaching he mainly provided the means to attend two full courses of lectures at the University of the City of New York, Medical Department, from which he was graduated M. D. March 10, 1885. He also took a post-graduate course at the same institution, 1891-92, and at the Long Island College Hospital, 1890-91. Upon graduating in medicine Dr. Brundage found himself very seriously impaired in health through over-study and over-work. Acting upon the advice of friends, he began a course of systematic exercise, which he pursued uninterruptedly for more than two years, securing remarkable results in muscular development and strength, which subsequently proved his salvation when burned. He was medical director of the gymnasium at Vanderbilt University, Nashville, Tenn., 1886-88; also at the University of Nashville, Peabody Normal College, 1886-89, at which he was also lecturer on sanitary science. While endeavoring to extinguish a fire in one of the University of Nashville buildings on October 22, 1888, he was so severely burned that his life was despaired of, face and hands being almost entirely denuded of skin, and the deeper tissues also burned. He was confined to his bed, suffering greatly for a long time before recovering sufficiently to go about. When able to do so, the shock and other effects of the fire had seriously affected his nervous, muscular and articular systems, and greatly impaired his memory; that his face and hands were not permanently scarred was due to patient surgical efforts. Notwithstanding his previous extraordinary physique and vigor, the burns left him so much a confirmed invalid that he found it necessary to sever his connections in Nashville and remove to Brooklyn, N. Y. Having sold such of his effects as could not be readily transported in small space, he packed the remainder in trunks, and with his wife took the train for New York via Cincinnati. In changing cars at the latter place, his trunks, containing his diplomas, instruments, books, valuable collections, money, etc., were transferred to the ill-fated day express, and consequently lost in the Johnstown disaster. He and his wife fortunately took the Chicago limited instead, and consequently participated in the anxiety of its memorable race with the flood. The loss of his trunks was a very severe blow, and left him penniless. By gradual improvement in health and memory he was ultimately enabled to enter active business life, and began the practice of medicine in Brooklyn February 1, 1891, where he is building up a very satisfactory practice. Dr. Brundage was one of the founders of the Brooklyn College of Pharmacy, instructor in botany, materia medica, pharmacognosy and organic chemistry in the same, 1891-92; its first vice-president, 1892-93, and president, 1893-94; president of the Alumni Association of the Brooklyn College of Pharmacy, 1892-93; first vice-president of the Kings County Pharmaceutical Society, 1892-93; president of the same, 1893-94; is lecturer on hygiene in the Brooklyn College of Pharmacy; was secretary of the medical and surgical staff of the Central

Throat Hospital and Polyclinic, 1893, and vice-president of the same, 1894; German Hospital Association, American Association for the Advancement of Science; president of the Brooklyn Medical Society from, 1895 to 1897; president of the Metropolitan Training School for Nurses; Professor of Toxicology, Physiology and Hygiene in Brooklyn College of Pharmacy; member and examiner in toxicology and posology Board of Pharmacy of the City of New York; vice-president; member of the American Pharmaceutical Association of the New York Pharmaceutical Association, New Jersey Pharmaceutical Association; physician to Bushwick Hospital; member of the Brooklyn Pathological Society, Medical Society of the County of Kings, German Medical Society, American Microscopical Society, Physicians' Mutual Aid Association; lecturer on materia medica, Training School for Nurses. His pharmaceutical and medical contributions have been: "What a College of Pharmacy Does for a Drug Clerk," which has been printed in a number of pharmaceutical journals, and also translated into German; "The Physician and his Mission," "The Modern Treatment of Pulmonary Tuberculosis," "Hints on Health," etc. He married, September 26, 1888, Sarah Alice, daughter of Rev. Kilburn Holt, of Amherst, Mass. Their children are Nellie Mervina, born July 20, 1889, and Albert Edward, born October 2, 1892.

PFUNTNER, Charles H., of Cincinnati, Ohio, was born in Dansville, N. Y., April 7, 1868, and is of German parentage. After receiving his preliminary education he began the study of medicine and attended the American Eclectic College of Ohio in Cincinnati, and received the

*C. H. Pfuntner*

degree of M. D. from that institution in 1893, since which time he has been engaged in the practice of his profession. His office is located

at 1114 Elm street, Cincinnati, where he makes a specialty of the treatment of venereal diseases.

*Frank E. Manker.*

MANKER, Franklin E., of Indianapolis, Ind., was born in Mooresville, Ind., September 7, 1858, his parents having removed from Highland county, Ohio, to the Hoosier State before his birth. After attending the common schools he was graduated at the high school of Indianapolis. He also took a short course at Asbury (now DePauw) University. The subject of this sketch then taught two years in the public schools of his native town. After studying medicine the usual length of time, he attended several courses at the Medical College of Indiana, from which institution he received his medical degree in 1884, and has been engaged in an extensive and general practice of medicine and surgery in Indianapolis and vicinity during the past fourteen years. In 1890 Dr. Manker was elected coroner of Marion county, Indiana, which position has afforded a fine field for pathological and medico-legal investigation. He has also served as assistant to the Chair of Surgery in the Medical College of Indiana. Dr. Manker, while actively engaged most of the time in the duties of his profession, occasionally travels for health and pleasure. During a voyage to Alaska in 1897 he was shipwrecked off the southwestern coast of that territory, and made his escape in an open boat to a desolate island, where he remained several days and nights without food, enduring great suffering until happily rescued by friendly Indians. Dr. Manker has a large clientele and a commodious office at 137 West Market street, Indianapolis, which is fitted up with all the modern facilities for the medical and surgical treatment of disease.

McMAHAN, C. Agnes, of Indianapolis, Ind., was born December 28, 1849, at Huntingburg, Ind., and was educated in the public schools

and at the State Normal institution. She then studied medicine and was graduated from the

*C. Agnes McMahan.*

Woman's Medical Department of the Northwestern University, Chicago. After receiving her medical degree she was appointed resident physician of the Woman's Hospital of the State of Illinois. After serving her full time in this capacity she located, in October, 1880, in Evansville, in her native State, where she remained for fifteen years, engaged in a successful general medical practice, but giving especial attention to obstetrics and gynecology. Dr. McMahan has been connected with the King's Daughters Training School for Nurses, Sanitary League and Orphan Asylum at Evansville. In 1895 she went to Europe, and while abroad made a special study of diseases of women in foreign schools and hospitals, where she had the advantages of the teaching of the most noted clinicians and witnessed the operations of some of the most skillful gynecologists of the world. The doctor is now located in the Willoughby Block, Indianapolis, and is an honored member of her county and State medical societies.

BORIES, Emil, of Seattle, Wash., son of Herrman and Rosa (Freiman) Bories, grandson of Joachim Bories, was born July 12, 1852, at Aupal, Province of Bohemia, Austria. He received his elementary education in the public schools at Sacramento, Cal., and Portland, Ore., and in private schools of San Francisco; later he attended the Portland Academy, under Prof. T. M. Gatch, and received the degree of A. M. from the Society of American Literature and Arts, Buffalo, N. Y., in 1891. He commenced the study of medicine in 1875 at McMinnville, Ore., under Dr. James T. Augur, of that place, and Dr. H. R. Littlefield, at Dayton, Wash. He attended four courses of medical lectures, three winter and one summer, at the Bellevue Hospital Medical College, New York City, and at the Medical Department of the University of Vermont, receiving from

the latter institution the degree of M. D. in 1885. He immediately located in practice at Dayton, Wash., remaining there six years, and then removed to Snohomish, Wash., but the climate not agreeing with him, he returned, after six months, to Dayton, and in 1894 removed to Seattle. He served through the small-pox epidemics of Columbia county, Washington, in 1880, and along the Northern Pacific Railroad in Montana during its construction in 1881. He is a member of the Inland Empire Medical Society, State Medical Society of Washington, American Medical Association, National Association of Railway Surgeons, Pharmaceutical Association of Washington, registered pharmacist State of Washington, Delta Mu Medical Society of Burlington, Vt., and is a medical licentiate of the States of Oregon, Vermont and California. He was resident surgeon of Washington & Columbia River Railway, ex-county coroner, ex-city health officer, lecturer on hygiene, physiology, chemistry and anatomy, Dayton High School, and is medical examiner for several insurance associations and companies. He is a member of the Masonic fraternity, including the higher degrees, Odd Fellows, Knights of Pythias and several other secret societies, and is special correspondent for several literary and current publications of Washington and Oregon. He was physician for Columbia county, Washington. Dr. Bories is the author of a paper on "Permanganate of Potassium in Rattlesnake Poisoning," *Medical World*, September, 1891; "Cocaine Hydrochlorate in Sea-Sickness," *Southern California Practitioner*, June, 1886; "Apomorphia and Antipyrine in Asthma," *ibid.*, July, 1888; "Electrolysis in the Treatment of Warts," *Medical World*, Philadelphia, October, 1888, and numerous short articles and various formulæ which have been published in the medical

*Emil Bories.*

journals. He has also written a brochure on the impurities of drinking water. In 1891 he

invented a stethoscope, intended, with the aid of electricity, to enable physicians to distinguish the sounds of the heart and other important organs more clearly; the instrument is not ready for general use. Dr. Bories married, October 14, 1890, at Baker City, Ore., Miss Carrie Gundersheimer, of that city. Has one child, a son, Henry Villard Bories. In 1895 he was appointed lecturer on pharmacognosy, materia medica and toxicology in Department of Pharmacy, State University, and was appointed in 1897 quarantine officer for the port of Seattle. He is also medical examiner for several fraternal societies.

THOMAS, Rolla L., of Cincinnati, was born August 17, 1857, in Harrison, Ohio, and is a son of Milton L. and Susan J. Rybolt Thomas. Milton Thomas, when fifteen years of age learned the silversmith's trade, but afterwards studied medicine, graduating from the Louisville Medical College of Kentucky, and later

*Rolla L. Thomas.*

from the Eclectic Medical Institute of Cincinnati. He is a son of Thomas Thomas, who was a farmer by occupation. Dr. Rolla L. Thomas, the subject of this sketch, was educated at DePauw University, of Greencastle, Ind., where he graduated in 1878. He studied medicine under his father, and graduated from the Eclectic Medical Institute of Cincinnati in 1880, receiving the gold medal. He opened an office for the practice of his profession at Harrison, Ohio, and later removing to his present location, his office and residence being at 792 McMillen street, Walnut Hills, Cincinnati. He is a member of the National Eclectic Medical Association, the Ohio State Eclectic Medical Association, and the Cincinnati Eclectic Medical Society. In 1887 he was elected a Professor of Principles and Practice of Medicine at the Eclectic Medical Institute of Cincinnati. He has contributed frequent articles to the eclectic medical journals. On July 1, 1880, he was united in marriage with Miss Sallie B., daughter of William J. and Sarah Cook, and this union has been blessed with five children: Rolla L.,

born November 3, 1881; Paul Milton, born September 14, 1883; Charles Neil, born December 11, 1885; Clara Elsie, born June 30, 1888, and Dorothy, born January 11, 1894. Two of these, Rolla L. and Paul Milton, are deceased. The family are members of the Methodist Church.

GRAHAM, Thomas A., of Jeffersonville, Ind., was born near New Washington, Clark county, Indiana, March 6, 1847. His paternal grandfather, James Graham, was of Scotch-Irish descent, and came to this country from the Province of Ulster, Ireland, locating in Philadelphia about 1815. The father of Dr. Graham, William Graham, was born in the State of Pennsylvania in the year 1817, and in 1823 with his parents moved to the State of Indiana, locating at Madison. The mother of Dr. Graham was Catherine Patterson, and a descendant of Major Giles, a gentleman of Revolutionary fame. She was born at Bethlehem, Ind., in 1823, and is still alive. William Graham, father of Dr. Graham, died in 1873. Dr. Graham was reared upon a farm and followed the pursuits of a farmer until he was nineteen years of age. After receiving a common school education he graduated from Hanover College. In 1868 he took up the study of medicine under Drs. F. M. Carr and David S. Armer, of Oregon, and New Washington, Ind. He entered the Medical College of Ohio in the fall of 1868 and graduated in 1871; the following year he completed a course in the Medical Department of the University of Kentucky, Louisville, and in 1890 from the New York Polyclinic. He has practiced in Jeffersonville, Ind., since 1871, with the exception of three years, from 1887 to 1890, during which time he was engaged in active practice at Wichita, Kan. His office is located at 49 W. Chestnut street, in the former city. He served as secretary of the county board of health from the date of its organization until 1885, and as physician to the State Prison South from 1885 to 1887. In 1882 he was elected a member of the city council, and served as a member of that body until 1886. As a practitioner of medicine Dr. Graham ranks among the highest, and enjoys a large and lucrative practice not only in Clark, but adjoining counties. He is a member of the Jeffersonville Academy of Medicine, the Clark County Medical Society, the Indiana State Medical Society, the Tri-State Medical Society, the Southwestern Kansas Medical Society and the American Medical Association. He is also medical examiner for the New York Life, the New England Mutual, Penn Mutual, Connecticut Mutual, the Germania, the Knights of Honor, Knights of Labor and of several other organizations. In 1896 he was elected to the lower house of the Indiana Legislature, and was re-elected again in 1898. His record as a member of this body has been characterized by the exercise of those qualities which mark the careful and conscientious legislator, and during his labors at the State capital he gained the respect and esteem of all with whom he came in contact. He was a member of the Committee on Medicine, Health and Vital Statistics, and did as much or more to secure the passage of the act regulating the practice of medicine, surgery and obstetrics than any other member of the assembly. He is known for his close observance of all new legislation, having been firm in opposition to such measures as he considered inimical to the welfare of the people, and active in supporting bills formu-

lated with a view to the advantage of the citizens at large. Dr. Graham was married in

*Thomas A. Graham.*

May, 1871, to Miss Dora B. Haymaker, daughter of J. W. Haymaker, a prominent merchant of Eminence, Ky. He is a member of the Christian Church, a Mason, a Knight Templar, and a member of the Knights of Honor, Knights and Ladies of Honor and other fraternal organizations.

CASEBEER, Jacob B., of Indianapolis, Ind., was born April 11, 1839, in Holmes county, Ohio, and was the son of David and Rebecca (Kenes-treck) Casebeer, who were natives respectively of Pennsylvania and Virginia. His father was a farmer by occupation and of German descent, his ancestors having emigrated to America before the Revolutionary war, and as soldiers helped to procure American independence. Owing to his father's limited means and the large family with which he was blessed, Dr. Casebeer was largely thrown upon his own resources early in life, and his struggles with what many would call discouraging circumstances has served to develop in him those latent resources which are only fully brought out by overcoming opposing obstacles. Like other self-made men, he has the consciousness of being largely the architect of his own fortune. While his early educational advantages were necessarily limited to the common and select schools, he improved these advantages, and at the age of fourteen was a licensed school teacher. In the winter of 1853 and 1854 he engaged, with some misgivings, to take charge of a district school which had been broken up, and which was noted for its unruly attendants and expulsion of its teachers. His resolute nature, backed by a desire for a situation and a start in life, induced him to make the trial, which was very successful, and resulted in his employment for three years in succession, each term by arrangement being extended beyond the time specified. For eight years he followed the profession of teaching, and, being always

active in the attendance and work of the teachers' institutes, which at that time was carried on wholly by the teachers themselves, both in the work and expenses of those annual meetings. He was soon called to take charge of town schools, and in this capacity is well remembered in Middletown and Fredericksburg, Ohio. He spent his earnings and time not actively engaged in teaching in attending higher grades of school until he was possessor of a good academic education. In 1860 he went to Hardin county, Kentucky, and with his brother, E. L. Casebeer, engaged in business, but soon found the school-room more to his liking. Before the breaking out of the Civil War in 1861 he had accepted a position as instructor of a select class of advanced students. Before the fulfillment of this contract the secession spirit became so strong that he was several times ordered by the rebel bands to go North; as he was a pronounced Union man and had shocked the southern people by voting for Abraham Lincoln for president, amidst the jeers and threats of a large crowd which happened to be present, and which then threatened to do him violence. His patrons, however, most of them pronounced secessionists, promised to protect him from injury, and believing the war would last but a few weeks or months, at most, and wanting their school continued, encouraged him to remain until the present contract was fulfilled, at least. This he did at the peril of his life, but upon the approach of the rebel army to Elizabethtown he took the train north, but none too soon, as in two days after his departure the army captured the city, burned all the bridges to the northward and thus put a stop to all northern travel, as well as trains. Soon after

*J. B. Casebeer*

his return to his father's home he was engaged to finish the enrollment of Salt Creek township,

in his native county, where existed such a disloyal element that they had destroyed the records, and by personal violence had driven away all former enrolling officers and threatened to kill any one who would dare undertake to complete the work. In spite of these threats and the efforts of angry women to scald him with hot water and the men who lay in wait for him in secret places, he finished the enrollment and returned to Dr. Martin's office in Fredericksburg, where he had begun the study of medicine. In the fall of 1883 he entered the Medical Department of Michigan State University at Ann Arbor, remaining there six months. In the spring of 1864 he presented himself for examination before the Ohio board of medical examiners for a position as surgeon in the army. Having successfully passed this examination, he was ordered on duty at the Dennison United States Army General Hospital at Camp Dennison, near Cincinnati, Ohio, as a contract surgeon. He was put to work as an assistant to Dr. Chaney, who was in charge of the Fourth division, but was soon promoted to full charge of a large portion of the tent hospital until the approaching winter compelled the striking of tents for warmer quarters. He was then placed in charge of the Fourth division, which was then made the fever division of said United States army hospital. He remained there until 1865, when he was commissioned by Gov. Todd as first assistant surgeon of the One Hundred and Third regiment, Ohio volunteer infantry. He immediately started for his command, then in North Carolina, which, after much difficulty and delay, he reached, and was mustered into the field service March 15 and remained with his regiment until mustered out of service, on account of the close of the war, in Cleveland, Ohio, June 24, 1865. While en route home from Raleigh, N. C., to Cleveland for final discharge, the One Hundred and Third regiment met with their saddest experience for many months, while crossing the Alleghany mountains; having reached their summit and taken breakfast at Altoona, they began their descent on the western side, when on a steep precipice of many feet a car wheel gave way and several cars were precipitated to the bottom of the precipice. Many soldiers on top and within the cars were thus hurled down the mountain side, killing and crippling a large number when almost in sight of their old homes and friends. While in the field the One Hundred and Third was made the headquarters guard for Gen. Schofield, who was in charge of the Twenty-third army corps. The war now ended, Dr. Casebeer returned to the office of Dr. Martin, his former preceptor, continuing the study of medicine and assisting the doctor in his practice until autumn, when he went to the city of New York and matriculated in the Bellevue Hospital Medical College, one of the leading colleges of the city, from which he graduated with marked distinction March 1, 1866. The following April he went to Auburn, Dekalb county, Ind., where he formed a copartnership with Dr. Kusler for the practice of his profession for the next three years, and where he continued in active practice for twenty-nine years, except the winters of 1874 and 1881, which were spent in reviewing his studies in the different colleges of the East. He was associated with Dr. Spooner, a student from his office, and for a short time with Dr. Littlefield. With the exception of these short intervals he was alone in his practice until July

14, 1879, when he associated himself with Dr. J. G. Matherly, which continued over fifteen years, and until he quit a laborious country practice and moved to Indianapolis, where he now resides. Dr. Casebeer has been eminently successful, always found in the front ranks of the profession, and has been the recipient of a full share of the honors and emoluments of the same. He has always been an active member and usually an officer in the local county, state and national medical societies, and through his writings and practice has enjoyed much more than a local reputation. He has served many secret orders and prominent life insurance companies as their medical examiner, the Detroit, Eel River and Illinois Railroad as their surgeon, and during ex-President Harrison's administration served on the board of pension examiners at Auburn, Ind. Dr. Casebeer takes an active interest in all moral reforms, loves his home and enjoys the confidence and esteem of a large circle of friends. He was married to Hattie E. Smith, of Fredericksburg, Ohio, daughter of Eli B. and Fannie Smith, on February 5, 1863. She died at Auburn January 28, 1869, leaving one daughter, Fannie R., born November 27, 1865. He was again married on June 4, 1872, to Miss Sarah E. Nycum, of Fort Wayne, a lady of rare intelligence and an active and worthy member of the Methodist Episcopal Church, of which her husband has been a member since his early manhood. The product of this second marriage is one daughter, Hattie E., born April 11, 1873, who was married to Eugene C. Altenburg in October, 1894, who are also living in Indianapolis.

**BICKMORE, Lawyer M.**, of Cincinnati, Ohio, was born in Clermont county, Ohio, near Batavia. His remote ancestors were of Welsh-English extraction, lineal descendants of the old Puritan stock. His father was a native of Massachusetts, and his mother a native of Pennsylvania. He was raised on a farm, remaining at home until the age of eighteen years, at which time he began to teach, and began reading medicine at the same time under the preceptorship of Dr. J. S. Combs, of Owensville, Ohio. By means of the money acquired by teaching he paid for his tuition in the Ohio Medical College, Cincinnati, Ohio. In 1860 he began his labors as a practitioner, locating in his native town, Owensville, Ohio. In 1864 he enlisted in the War of the Rebellion. He recruited the first company of National Guards in Clermont county, of which company he was elected captain, serving in this capacity until the end of the term of service, when he was regularly discharged. After discharge he again resumed the practice of medicine. While in the service of the United States he was wounded by a Rebel bullet in the left arm in a battle at Alpine Station, W. Va. He continued the practice of medicine at Owensville, Ohio, until about the year 1870, when he moved to Bloomington, Ill., continuing in the practice of his profession while there. During the year 1878 he was regularly nominated in convention for Congress, and made the canvass of his district against his opponent, Adlai Stevenson. He remained in Illinois until about 1882, when he again removed back to his native State and located at Dayton, Ohio. While there he was appointed physician in charge of the Widows' Home, a position he held for about five years, severing his connection with that institution in consequence of his removal to Cincinnati about

1891. Since that time he has been in the practice of medicine in Cincinnati. During the

*Lawyer M. Bickmore.*

year 1891-92 he attended the American Eclectic Medical College, Cincinnati, Ohio, taking a degree from this institution in 1892. Since 1892 he has occupied the Chair of Professor of Obstetrics and Gynecology in this institution, and since 1893 has served as Dean of the College. For the past fifteen or more years he has limited his practice to the treatment of diseases of women, nervous and chronic diseases. He is a member of several medical societies, county, state and national; also, holds membership in the Royal Society of England.

FELTER, Harvey Wickes, of Cincinnati, Ohio, was born at Rensselaerville, Albany county, New York, June 15, 1865, a son of Andrew Jay and Elizabeth (Nichols) Felter. The former is a son of Elisha P. and Mary (Wagner) Felter; the latter was of English descent. The ancestors on the paternal side were among the French Huguenots, driven from France into Holland, from whence they emigrated to America at an early day, and settled in the State of New York. They were among the founders of the town of Saugerties, in the Empire State. Elizabeth (Nichols) Felter was a daughter of Leuman H. Nichols; she died at Lansingburgh, N. Y., June 22, 1873. Dr. Felter at the age of twelve years was left to make his own way in the world, and for nine years he worked for a farmer during the summer time. He received his early education in the District School No. 7, at Groveside, in the town of Pittstown, Rensselaer county, New York, and in the public schools of Lansingburgh and Troy, N. Y. He later attended the Lansingburgh Academy. In 1883 he began the study of medicine under Dr. Alexander B. Willis, of Johnsonville, N. Y., an allopathic physician of prominence, and liberal in his attitude toward the rival branches of the profession. Dr. Felter during a portion of this period (three years) taught school during the winter months at

Potter Hill, N. Y., East Pittstown, N. Y., and at Groveside, his home district. He graduated at the head of a class of sixty at the Eclectic Medical Institute of Cincinnati, Ohio, June 5, 1888. He at once opened an office in Troy, N. Y., but in the autumn of 1889 returned to Cincinnati, where he has since practiced general medicine, his office and residence being located at 1733 Chase avenue, on the north side of that city. During his residence in New York State Dr. Felter was a member of the Albany County Eclectic Medical Society and of the Eclectic Medical Society of the State of New York. He is a member of the Cincinnati Eclectic Medical Society, of which he was one year the secretary, and the next its president; a member of the Ohio Eclectic Medical Association, of which he has been a very active member, having served as recording secretary and vice-president, and is now president of that body. He is also a member of the National Eclectic Medical Association. Upon the death of Dr. Andrew Jackson Howe and the temporary transfer of Dr. W. E. Boyer to the Chair of Surgery, Dr. Felter acted as Professor of Descriptive and Surgical Anatomy during the session of 1891-92, in the Eclectic Medical Institute of Cincinnati. He is now Demonstrator of Anatomy and Junior Professor of Chemistry, Pharmacy and Toxicology in the same institution, Professor John Uri Lloyd holds the senior position. He has contributed regularly to the *Eclectic Medical Gleaner* (his series of articles on eclectic medicines having attracted considerable attention in this country and abroad), and to the *Eclectic Medical Journal*, the chief organ of the eclectic school, and of which he is associate editor. He has also contributed regularly to the *Annual of Eclectic Medicine and Surgery* of Chicago; his favorite field of work is in the lines of botany, pharmacology, materia

*Harvey Wickes Felter.*

medica, specific medication and medical history and biography. In 1896 he edited *Locke's*

*Syllabus of Materia Medica*, the same being an elaboration of lecture notes, with large additions by the editor. This work is now a standard text-book in the eclectic colleges throughout the United States. He is at present engaged in rewriting and revising *King's American Dispensatory*, the standard work of the eclectic school on materia medica, pharmacology and therapeutics, and adopted as official by the National Eclectic Medical Association. One volume has just been issued from the press. In this work he is associated with John Uri Lloyd, Ph. M., famous as the author of "Etidorhpa." There are but two other works of a similar character in this country, these being the "United States Dispensatory" and the "National Dispensatory," both of the allopathic school. Dr. Felter was married January 1, 1890, to Martha Reyburn (born October 5, 1869), daughter of James Calvin and Mary Helen (Miller) Caldwell, of Fair Haven, Ohio, a lineal descendant of John Caldwell Calhoun, and the Calhouns of South Carolina. Dr. and Mrs. Felter have two children, Dorah Helen, born October 23, 1893, and Lloyd King, born July 9, 1896. Dr. and Mrs. Felter are members of the Presbyterian Church.

SAVAGE, Giles Christopher, of Nashville, Tenn., son of Rev. Hamilton Giles and Eleanor Jane (Shields) Savage, grandson of Martin Savage, was born January 15, 1854, in Tishomingo county, Mississippi. Educated in the common schools and at the Henderson (Tenn.) Masonic Male and Female Institute to within one year of a degree, he began to read medicine, in 1874, at Henderson, under Drs. W. J. and J. A. Crook; attended two courses of lectures at the Jefferson Medical College, Philadelphia, and was graduated March 12, 1878; also, took a post-graduate course at the same institution, in 1880-81; a course in the Royal Ophthalmic Hospital, London, in 1884; and courses in the General Hospital, Vienna, in 1884-85. Dr. Savage practiced medicine in McNairy county, Tennessee, five months in the year 1877; was in Jackson, Tenn., in 1878-86, and has practiced in Nashville since 1886, his office being located at 139 North Spruce street, in that city. He has held the Professorship of Ophthalmology in the Medical Department of the University of Nashville and Vanderbilt University, Nashville, Tenn., since 1886, and is expert medical examiner for the United States pension office. Dr. Savage is a member of the Nashville Academy of Medicine, president in 1891; of the American Medical Association, secretary and treasurer of the committee of arrangements for the Nashville meeting in 1890; member of the board of trustees from 1896 to 1898; also, a member of the Medical Society of the State of Tennessee, vice-president in 1895; of the First Pan-American Medical Congress; of the Eighth International Congress of Ophthalmology; of the Middle Tennessee Medical Association; of the Tri-State Medical Society of Tennessee, Georgia and Alabama; secretary and treasurer of the Southern Medical College Association, in 1892-95; a member of the Baptist State Missionary Board of Tennessee; of the Sunday-school Publication Board of the Southern Baptist Convention, and of the board of trustees of the Southwestern Baptist University, Jackson, Tenn. In practice Dr. Savage confines himself chiefly to ophthalmology and otology; has made a special investigation of oblique astigmatism

and the oblique ocular muscles: in 1891 devised an operation for muscle shortening, to replace muscle advancement; also, devised, in 1892, an operation for entropion, by adding from two to four vertical cuts to the Burrow incision; and in 1893 invented the stirrup forceps, to facilitate this operation and render it bloodless. His literary work includes papers on "The Function of the Oblique Muscles in Oblique Astigmatism," "Insufficiency of the Oblique Muscles: How to Detect and Correct," "Relationship between the Centres of Accommodation and Convergence," "Rhythmic Exercise, the Proper Method of Developing the Ocular Muscles," "The Law of Projection," "The Monoscopter," all republished in book form under the title of "New Truths in Ophthalmology, 1893." Dr. Savage founded in 1891, and has since edited and published, the *Ophthalmic Record*, Nashville, Tenn., now in its fourth volume. Married,

*Giles Christopher Savage.*

October 4, 1881, Miss Alice DeLesline Jones, of Booneville, Miss. Their living children are, DeLesline Nelson and Portia Atchison. Three sons, Glenn, Thomas Hamilton and Newton Forrester, died in infancy.

TAYLOR, Philip Richard, of Louisville, Ky., is the son of Edmonia Barrick and Philip Richard Taylor of Oldham county, Kentucky. He is descended from good old Maryland and Virginia stock, and is connected with a great number of people who played distinguished parts in the fight of this country for its independence, both before and after the Revolution, including his paternal ancestor, Captain Reuben Taylor, a descendant of James Taylor, who came to Virginia from the ancient town of Carlisle, England, in 1690. He is the grandson of Dr. William Moore Taylor, who was one of the most distinguished of those physicians who left the circles of culture and refinement in the earlier settlements of the colonies to brave the hardships and struggles of the wilderness. These men of culture, these mental giants,

were braver in making this venture than were the warriors well used to conflict. His grand-

*Philip Richard Taylor.*

son, the subject of this sketch, inherits from him, his distinguished progenitor, his ability as a surgeon, coupled with the manly courage and daring that bravely faced and conquered the terrors of the wilderness. Dr. William Taylor was the father of three sons, of whom two were physicians, and the other son, the father of our subject, has served the Grand Old Commonwealth with much distinction in her legislative body. To his efforts, his clear foresight, his legal acumen, his untiring energy and his tact and stern sense of justice, is due the settlement of the race trouble that threatened Kentucky through the school question. It was his brain that conceived the idea of having the white population pay all the school tax and thus give to the negroes their schools free. Our subject was born at Tippecanoe (now Skylight), Oldham county, Kentucky, November 10, 1862. He received his early education under the best masters of the schools of that county and the adjoining one of Jefferson. After a successful business career of several years in Louisville, Ky., he entered the Hospital College of Medicine of that city in January, 1886, and graduated with distinction from the same institution June, 1887. He commenced to practice in Decatur, Morgan county, Alabama, and in May, 1890, he located in Louisville and felt justified in adopting a specialty, and he limited his practice to the treatment of diseases of the eye, ear, nose and throat. He has made a remarkable success and has been compelled by pressure of duties to decline membership in societies that have sought to honor his attainments. In 1895 he was elected to the Chair of Materia Medica in the Hospital College of Medicine, where his success as a teacher, and his executive and financial ability, gained recognition in his

appointment as Dean of the College, which has flourished to an amazing degree under his direction. October 25, 1886, Dr. Taylor was married in Louisville, Ky., to Miss Kattie Reynolds, the daughter of Dr. Dudley S. Reynolds, of Louisville, Ky. She comes from a family which numbers among its members physicians of distinction, among whom are the late Dr. Jolliffe Tuffnell, who was president of the Royal College of Physicians and Surgeons of Dublin; and Dr. Admiral Reynolds, of Warren county, Kentucky, who was one of the earliest graduates of old Transylvania University, and who was the author of one of the first medical books written west of the Alleghanies.

DAVIS, Jacob W., of Anderson, Ind., is of English descent, and is one of the best known physicians of central Indiana. After receiving a liberal preliminary education, he began the study of his profession. Selecting the Physio-Medical school, he attended lectures at the Physio-Medical College of Indiana, Indianapolis, and was graduated M. D. from that institution in 1889, since which time Dr. Davis has been located in the city of his present residence, where he has succeeded in establishing himself in an extensive and profitable medical and surgical practice, not only in one of the most enterprising manufacturing cities of the world-famous natural gas regions, but throughout that section of his State. No county in the United States has grown more rapidly in population and wealth than Madison county, Indiana, the one which the doctor selected for his field of professional labors, and the wisdom and fore-

*J. W. Davis*

sight which guided his choice is attested by his large and remunerative clientele.

LAKE, Elizabeth M. (deceased), of Indianapolis, Ind., was born near New Castle, Henry

*Elizabeth M. Lake.*

county, Indiana, November 29, 1859. She was of English descent, and a daughter of James E. Lake, an educator in that part of the State. Her preliminary education was obtained at the New Castle High School. She then began the study of medicine under the preceptorship of Dr. H. D. Williams, a prominent physician of New Castle. She then attended the Physio-Medical College of Indiana at Indianapolis, and was graduated with high honors from that institution in 1891. Her medical education was supplemented by a special course in gynecology at the Philadelphia Polyclinic. In 1892 she began the practice of her profession in Indianapolis, where she remained for six years, during which time she was quite successful in general practice of medicine, as well as in the treatment of diseases of women. Her death occurred from disease of the heart September 8, 1898. Dr. Lake was a lady of great energy and ambitious and enthusiastic in the pursuit of her profession, but her arduous duties proved too great for her impaired health. Her death was lamented by her many friends and patrons, and the world has been bettered by her life and achievements.

CONNOR, Phineas Sanborn, of Cincinnati, Ohio, son of Phineas Sanborn and Eliza A. (Sanborn) Connor, grandson of Gideon Connor, was born August 23, 1839, at West Chester, Pa. He was educated at the Hughes High School of Cincinnati, Ohio, and at Dartmouth College, receiving from the latter institution the degree of A. B., in 1859, and LL. D., in 1884. He commenced the study of medicine in 1858, at Hanover, N. H., with Dr. A. B. Crosby, later pursuing his studies with Drs. Thomas Wood and John S. Butler. Attending three courses of medical lectures, one at the Medical College of Ohio, in 1858-59, one at Jefferson Medical College, in 1860-61, and one at Dartmouth Medical College, in 1861; he was gradu-

ated from the Jefferson Medical College, March 8, 1861. He commenced the practice of medicine as assistant surgeon, United States Army, being commissioned April 16, 1862, and resigning as assistant surgeon and battalion major, United States Army, August 1, 1866. From the latter date to the present time he has been located in Cincinnati. Dr. Connor is a member of the American Medical Association; has been president of the American Surgical Association, president of the American Academy of Medicine, and president of the Ohio State Medical Society, and is a member of the American Public Health Association. He is Professor of Surgery in the Medical College of Ohio, Professor of Surgery in Dartmouth Medical College, surgeon to Cincinnati Hospital and to Good Samaritan Hospital. He is the author of various journal articles, of articles on "Gun Shot Wounds," and "Diseases of Muscles, Tendons and Fasciæ," in the *International Cyclopaedia of Surgery*; on "Tetanus," in Pepper's System of Medicine; and of certain chapters in American Textbook of Surgery. Dr. Connor is a specialist in the department of surgery. Married, December 17, 1873, Miss Julia E. Johnston, of Cincinnati, Ohio. They have three children, Edith Johnston, Phineas Sanborn and Helen Elizabeth Connor.

WILSON, Charles A., of Indianapolis, Ind., is of English descent. After obtaining a liberal preliminary education he began the study of medicine and was graduated in 1879 at the Medical College of Ohio, at Cincinnati, and obtained the Faculty prize for proficiency in his studies at that institution. Dr. Wilson has for the last twenty years given much attention to surgery, and especially to the orthopedic branch of that science, and in the selection, invention and application of mechanical devices for the successful treatment of various deformities he has obtained a wide and most excellent reputa-

*Charles A. Wilson.*

tion. He has been located in Indianapolis for many years, and is proprietor of the Wilson

Surgical Institute, located at 122 West Ohio street, that city. This institute is fitted up with all the modern facilities for the cure of cases in the line of his practice, and where many patients from all parts of the country derive the benefit of his skill.

LE HARDY, Julius C., of Evansville, Ind., is one of the best known and most popular medical men of that city. After receiving a liberal preliminary education he began the study of medicine, and attended courses of lectures at the Medical College of Georgia (Medical Department of the University of Georgia), Atlanta, where he was graduated in 1892. After practicing his profession four years he supplemented his medical education at the Post Graduate New York Medical School and Hospital in 1896. Dr. Le Hardy has served as interne of the United States Marine Hospital, and is secretary and treasurer of the Vanderburgh County

would ever be able to realize her early wishes, she yet fitted herself in literature, history, natural science and the languages, and in 1871 she took three full courses of medical lectures at the Woman's Medical College of the New York Infirmary, and was graduated April 18, 1874. She settled in Lawrence, Mass., where she practiced constantly until the autumn of 1888, when she removed to Boston, where she now resides, and where she still continues to practice. She was on the regular staff of physicians and surgeons of the Lawrence General Hospital from its organization until she left the place, and is now Professor of the Principles and Practice of Medicine in the College of Physicians and Surgeons, Boston, Mass. She is a member of the Massachusetts Medical Society, American Medical Association and the American Association for the Advancement of Science. She is the author of a paper on "Food Poisoning," read before the Essex North District Medical Society, an abstract of which was published in the *Boston Medical and Surgical Journal*; "The Medical Profession and the People," read before the same society, May 6, 1891; "The Prevention of Disease," read at Mechanics Building, Boston, in the literary and scientific course of the Massachusetts Charitable Association Fair, October, 1892, and afterward published in *Health*. Married, in 1856, Charles F. Crocker, of Lawrence, Mass. They have one child, Annie Crocker.

NEWCOMER, Martin V. B., of Tipton, Ind., is of German lineage. He was born in Cambridge City, Ind., October 30, 1836, and is a grandson of John Newcomer, who came from Switzerland in the middle of the 18th century and settled near Lancaster, Pennsylvania. He is the son of Christian Newcomer, a native of Lancaster, Pennsylvania, and Elizabeth (Hartman) Newcomer, a native of York, Pennsylvania. His parents moved to Indiana in 1825 and settled near Cambridge City where he was born, and when but 11 months old they moved to Hamilton county, Indiana, 20 miles north of Indianapolis, settling on a farm where he was raised. His father was a soldier in the war of 1812. Among his ancestors were many men of learned professions. After receiving his preliminary education, he taught in the public schools for 8 years, and then began the study of medicine and attended courses of lectures at the Medical College of Ohio (now the Medical Department of the University of Cincinnati), from which institution he was graduated in medicine in 1867. His medical education was supplemented by a course at the Chicago Polyclinic, and he has taken partial courses every year since. For the last thirty-three years Dr. Newcomer has been engaged in the active and successful practice of medicine and surgery, and is one of the best known medical men in Central Indiana. He is an honored member of his county and State Medical Societies, as well as the American Medical Association, New York Medico-Legal Society, International Association of Railway Surgeons and several other organizations, and has been for several years a member of the board of trustees of the Central College of Physicians and Surgeons at Indianapolis, and fills the chair on railway surgery in same college, surgeon to the L. E. & W. R. R., and southwest system of the P., C., C. & St. L. Ry. Co., and for 18 years was examining surgeon for pen-

*Julius C. Le Hardy.*

Medical Society. He is also a member of the Indiana State Medical Society, is oculist and aural surgeon for the Louisville and Nashville Railroad, and medical examiner for several insurance companies and fraternal organizations. Dr. Le Hardy's office is now located at 416 Upper First street, Evansville, where he limits his practice to diseases of the eye, ear, nose and throat.

CROCKER, Susan Elizabeth (Wood), of Boston, Mass., daughter of Nathan Thompson and Ann Maria (Kimball) Wood, granddaughter of William Wood, was born January 6, 1836, at Halifax, Mass. Her preliminary education was obtained at Pierce Academy, Middleboro. It was her early desire to study medicine, but although a certain physician and his wife offered to take her into their family and educate her for the profession as best they could in those days, she determined that she would not become a doctor of medicine until she could study in a medical college. In 1856 she married, and although not supposing that she

sions, and is now a member of the Board of Examining Surgeons for Pensions at Tipton,

*Martin V. B. Newcomer.*

Ind. He is associated in the practice of his profession with Dr. A. S. Dickey, one of the leading physicians of Tipton county, and both have a large clientele throughout their section of the State. Dr. Newcomer was married December 14, 1865, to Izora J. Wilson. They have two daughters, Mrs. James A. Shirk, of Delphi, Ind., and Clelia C. Newcomer, both graduates of DePauw University.

TUCKER, Albert R., of Noblesville, Ind., born in Indianapolis March 24, 1844, was the son of Robert Tucker and Elizabeth (Reid) Tucker. Robert Tucker settled in Indianapolis, Ind., in 1821. His wife, Elizabeth C. Reid, was born in Virginia, and was a daughter of Archibald Reid, who located in Indianapolis in 1819. The boyhood days of the subject of this sketch were spent in the city of Indianapolis until the year 1859, when his father removed to a farm in Clinton county, Indiana. His preliminary education was derived from the common schools of his native city. At the age of seventeen he enlisted in Company B, Seventeenth Indiana infantry, and was discharged for disabilities after service of nearly one year. In June, 1862, he re-enlisted in Company D, Seventy-second Indiana infantry, and during the winter of 1862 he was detailed as brigade scout for Wilder's brigade. He was promoted to division scout in the spring of 1863, and was promoted to corps scout for General George H. Thomas, and was transferred as second in command of General Wilson's cavalry corps scouts in the fall of 1864, in which position he remained until the close of the war. Dr. Tucker participated in the battles of Green Briar, W. Va.; and Hoover's Gap, Harrison's Landing, Buzzard Roost, Rock Springs, Chickamauga, Resaca, New Hope Church, Dalton, Altoona, Atlanta, Rome City, Franklin, Nashville, Ebenezer Church, Selma, Ala., Macon, and also par-

ticipated in the capture of Andersonville prison and of President Jefferson Davis. At the close of the war, at the age of twenty-one, he entered Bryan and Stratton's Commercial College, and was graduated from that institution in the spring of 1866. He began the study of medicine at Colfax, Clinton county, under Dr. Joseph E. Milburn, and received the degree of M. D. from Rush Medical College, Chicago, in the spring of 1869. He practiced medicine at Colfax, Ind., until the spring of 1871, when he removed to Cicero, Hamilton county, Ind., where he remained in the practice of his profession until the fall of 1892. He was then elected auditor of Hamilton county, and held that office from 1893 to 1897. At the close of his term of office Dr. Tucker returned to Chicago, taking a special post-graduate course in diseases of females and other branches, after which he established himself in the city of his present residence, where he has continued in an active and successful general practice of medicine, surgery, and especially gynecology, to the present time. He was married to Anna C. Benjamin in August, 1866, and three sons have blessed their union, Harry B. Tucker, D. D. S., Frank W. Tucker and Fred. A. Tucker, M. D. He is a member of the Masonic order, as well as that of Odd Fellows, Knights of Pythias and the Grand Army of the Republic. He served as United States examining surgeon for pensions under President Harrison, and has been reappointed to the same position under President McKinley. He is also a member of his State and county medical societies and of the Christian Church of Noblesville. Dr. Tucker is an active and influential politician, well known in central Indiana, and has always endeavored by every honorable means in his power to promote the welfare and success of the Re-

*A. R. Tucker*

publican party, and has been urged to accept the nomination for congress in his district.

DURHAM, Charles O., of Indianapolis, Ind., is of English lineage, and one of the most popu-

*Chas O Durham*

lar medical men on the south side of that city. After obtaining a liberal preliminary education, he began the study of medicine; attending lectures at the Central College of Physicians and Surgeons at Indianapolis, and was graduated M. D. at that institution in 1892. For the last six years Dr. Durham has been engaged in a general medical and surgical practice. His office is located at 602 South Illinois street, and fitted up with the most modern facilities for the successful pursuit of his profession. Dr. Durham is an honored member of the Marion County and Indiana State Medical Societies, also of the City Board of Health.

McFARLAND, Anne Hazen, of Jacksonville, Ill., daughter of Dr. George Clinton and Elizabeth Elliott (Bush) McFarland, granddaughter of Andrew McFarland, M. D., LL. D., was born October 10, 1867, at Lexington, Ky. At the age of twelve years, with her parents, she went to live with her grandfather, Andrew McFarland, M. D., LL. D., at Jacksonville, Ill., who was long celebrated in the treatment of the insane and founder of Oak Lawn Retreat at that place. She was graduated B. A., from the Jacksonville Female Academy, after a four years' course of study, in 1887, and this was followed by a second course at the Kentucky University, where she became a skilled book-keeper and phonographer. Dr. McFarland saw in his granddaughter the elements from which his theory for the fitness of women for the care of the female insane could be tested, and after a preliminary study under the direction of her father and her grandfather, in 1888, she entered the Woman's Medical College, Northwestern University, Chicago, Ill., and after three courses of lectures, was graduated with honors March 30, 1891. Since receiving the degree of M. D., she has become medical

superintendent of Melrose Abbey, Oaklawn Retreat for the Insane. She is a member of the Illinois State Medical Society, Morgan County Medical Society, Brainard District Medical Society and the Capital Medical Society; honorary member of "The Fortnightly," and member and secretary of the Illinois Queen Isabella Medical Association. She is a specialist in the department of nervous diseases, and is the author of many papers upon kindred subjects, among them being "Treatment of the Insane," Transactions Illinois State Medical Society, 1892; "The Lunacy Law of Illinois," *ibid.*, 1893; "The Relations of Operative Gynecology to Insanity," *Medical Review*, June, 1893; "Nervous Troubles Among Women," read before the Physical Culture Club, Springfield, Ill. She removed a fibroid tumor in a case of acute mania, in June, 1893; and has performed four operations upon the heads of epileptics, with two negative results, one improved, and the last cured. Dr. McFarland is associate editor of *Woman's Medical Journal*, published at Toledo, Ohio, the only woman's medical journal in the world.

JONES, John E., of Cincinnati, Ohio, was born in Newtown, Ohio, January 27, 1834. He is of English lineage and his ancestors were among the early settlers of Virginia and New Jersey. His preliminary education was received in his native town and completed at the Ohio Wesleyan University, from which institution he received the degree of A. B., June 10, 1858. He then studied medicine and attended the Medical College of Ohio, and was graduated from that institution as M. D. in March, 1863. During the Civil War Dr. Jones served over two years as surgeon of the Seventy-ninth Ohio Volunteer Infantry. After the close of hostilities he located at Cincinnati, where he has remained engaged in an active general practice of his profession ever since, his office

*John E. Jones.*

and residence being located at 911 McMillan street, in that city.

REYNOLDS, Dudley Sharpe, of Louisville, Ky., only son of Rev. Thomas and Mary (Nichols) Reynolds, was born near Bowling Green, Ky., August 31, 1842. He was educated in the private schools of Professors Arnold and Allman, at the Trimble High School, at Irving College and at Ogden College, Bowling Green, receiving from the last named institution the degree of A. M. in 1868, attended lectures at the University of Louisville, Medical Department, and was graduated M. D. March 3, 1868. In January, 1869, Dr. Reynolds was elected surgeon to the Western Dispensary, resigning the position in October, 1871, to engage in specialism. From October, 1871, to June, 1872, he was engaged in medical study at the New York Eye and Ear Infirmary, at the Wills Eye Hospital at Philadelphia and at the Royal London Ophthalmic Hospital in Moorsfields. On returning to Louisville in 1872, he turned his atten-

*Dudley Sharpe Reynolds.*

tion exclusively to ophthalmology and otology. When the Central University of Kentucky established its Medical Department at Louisville in 1873, Dr. Reynolds was appointed to the Chair of Ophthalmology and Otology, and took an active part in the organization of the Hospital College of Medicine. He represented the college at the meeting of medical teachers at Chicago in 1877, and participated in the organization of the Association of American Medical Colleges. At the joint convention of teachers and governing boards of medical colleges, held at Atlanta, Ga., May, 1879, he represented the faculty of the Hospital College of Medicine, and was its delegate to each of the succeeding annual meetings of the College Association; at the meeting held in Washington, D. C., May, 1891, he took a leading part in the reorganization of the Association of American Medical Colleges, was elected chairman of its judicial council, and re-elected at Detroit, in 1892, for a term of three years, and again at Baltimore, May 8, 1895. Dr. Reynolds in a member of the American

Medical Association, president of the section on Ophthalmology in 1880; at the Detroit meeting of this association, in 1892, he wrote the preamble and resolutions, which were unanimously adopted, pledging the support of that body to the Association of American Medical Colleges and demanding that all the colleges in the United States should observe a standard of requirement not to fall below the minimum standard adopted by the college association. Through his efforts this resolution was finally further strengthened at the Denver meeting, in 1898, by the adoption of the following: "Now, therefore, the American Medical Association gives notice that hereafter no professor or other teacher in, nor any graduate of any medical college in the United States, which shall after January 1, 1899, confer the degree of Doctor of Medicine or receive such degree on any conditions below the published standard of the Association of American Medical Colleges be allowed to register as either delegate or permanent member of this association." In conjunction with Drs. X. C. Scott, of Cleveland, Ohio, and J. M. Bodine, of Louisville, Ky., he formulated the plan for establishing the Section on Ophthalmology in the American Medical Association, which was presented to the meeting at Louisville in 1875, and subsequently adopted at Chicago in 1877. In 1879 the property of the public library of Kentucky was directed, by decree of the chancery court of Louisville, to be sold by the sheriff to satisfy judgments amounting to more than fifty thousand dollars. Dr. Reynolds conceived the idea and successfully undertook the reorganization of the Polytechnic Society of Kentucky, which, by special act of the legislature, had been empowered to take charge of the old public library property; but, owing to the decree of sale in chancery, the society had abandoned its trust. The reorganization was accomplished January 3, 1879, and a new executive council was elected. Dr. Reynolds, with four other gentlemen, having gone into bank and borrowed the money and paid off all the executions and judgments in court, announced to the society at its reorganization the purpose to take possession of the property at once. This met with unanimous approval, and the gentlemen who had procured the necessary funds for relieving the financial obligations were elected members of the board of directors to serve for five years. Dr. Reynolds was made chairman of the library committee, and at once set about the work of reclassifying the books. In the following November the building had been remodeled, a new library room provided and about twenty thousand volumes of useful literature were opened to the public. This plan of arrangement was continued until 1891, when the work of rearranging and cataloguing was begun; it was completed in 1894, and the last fasciculus of the subject catalogue, according to the Dewey system, was completed. Under Dr. Reynolds' management the library grew from a little more than twenty thousand to fifty thousand volumes. In 1879 he became editor of the *Medical Herald*, a monthly magazine, which was well supported by the profession and attained a wide circulation. He retired with the close of the year 1883. In March, 1886, Mr. D. W. Raymond established the *Medical Progress*, a monthly magazine for students and practitioners; he secured the services of Dr. Reynolds as editor-in-chief, and, after a successful career of five years,

the publishers, the Rogers-Tuley Company, having failed in business, the magazine was sold by the assignee, and Dr. Reynolds ceased his connection as editor. He has been appointed by the Kentucky State Medical Society as one of its delegates to the American Medical Association, annually, from 1872 to 1898, inclusive, and has been active in securing some of its most important legislation. At the Denver meeting, June 9, 1898, he offered a resolution "that the proposed official badge presented by Dr. R. French Stone, of Indiana, be and it is hereby accepted and adopted as the permanent badge of the association." He made a strong plea in favor of this resolution, which was seconded by Dr. I. N. Love, of Missouri; Dr. G. C. Savage, of Tennessee, and others with eloquent addresses, and the resolution was adopted by a decided majority in general session. In 1878, at the request of the Hon. James B. McCreary, Governor of Kentucky, he was appointed by the President of the United States an honorary commissioner from Kentucky to the International Industrial Exposition at Paris, France; represented the American Medical Association in the International Medical Congress of 1881, and in the British Medical Association at Ryde, Isle of Wight, August, 1881; was one of the vice-presidents of the section on ophthalmology of the Ninth International Medical Congress; was honorary president of the sections on ophthalmology and medical pedagogics, in the First Pan-American Medical Congress, Washington, D. C., September, 1893; delivered the annual oration before the Alumni Association of the Medico-Chirurgical College of Philadelphia, April 7, 1887, and was made a fellow of that college; is a member of the Mississippi Valley Medical Association, president in 1887; of the Academy of Medicine and Surgery in the Polytechnic Society of Kentucky, president in 1880; of the Kentucky State Medical Society, chairman of the board of censors, from 1881 to 1890; was president of the joint faculties of the Medical and Dental Departments of the Central University of Kentucky, from 1891 to 1893, and declined a reelection; is a member of the Mitchell District Medical Society of Indiana, and in July, 1892, was elected its president, a position never before occupied by a non-resident of that State; is a member of the Filson Historical Club and of the Watterson Club, Louisville; of the Polytechnic Society of Kentucky, and served as director from 1879 to 1894, inclusive. Dr. Reynolds has been Professor of Ophthalmology, Otology and Medical Jurisprudence in the Hospital College of Medicine, Medical Department of the Central University of Kentucky, since 1873, and conducts a largely attended clinic there each Monday and Thursday during the year; and has been surgeon to the Eye and Ear Department of the Louisville City Hospital, almost continuously since 1874. He is the author of many essays and clinical reports, embodying a great variety of subjects, and many original devices in ophthalmic surgery. Married, May 7, 1865, Miss Mary F. Keagan, of Louisville. Their children are, Dr. Dudley S. Reynolds, Jr., who lost his life by accident at Collinsville, Ill., October 22, 1894; and Mary A., wife of Professor P. Richard Taylor, M. D., dean of the faculty of the Hospital College of Medicine. His wife died March 3, 1876. Married, second, July 13, 1881, Miss Matilda L. Bruce, of Covington, Ky., daughter of Hon. Eli M.

Bruce, a distinguished member of the late Confederate States Congress. Of this union there are two children, Eli M. Bruce, and Elizabeth Reynolds.

CATTO, William M., of Decatur, Ill., was born near Hamilton, Canada, November 29, 1858. His parents were Scotch, having emigrated from Aberdeen, Scotland, in 1856. Dr. Catto was educated at the Collegiate Institute of St. Catharines, Canada, and studied medicine under Dr. P. L. Graham, of Bothwell. He attended lectures at the Detroit College of Medicine, where he graduated at the head of the class in 1881. He was house surgeon in the Michigan College Hospital, Detroit, for two years. He came to Illinois in 1883 and began the practice of his profession at Warrensburg. In the spring of 1888 he removed to

Decatur, Ill., his present home. While enjoying one of the most extensive general and consulting practices in Central Illinois Dr. Catto gives particular attention to surgery and surgical gynecology. He is examiner for a number of insurance companies, among which are: The John Hancock of Boston, Massachusetts Mutual of Springfield, Mass.; Fidelity Mutual of Philadelphia, Pa.; Union Central of Cincinnati, Ohio; Franklin Life of Springfield, Ill.; Covenant Mutual of St. Louis, Mo.; Mutual Benefit of Newark, N. J., and several others. He is attending physician in charge of St. Mary's Hospital, Decatur; is an active member of all local medical organizations, as well as the Illinois State Medical Society, and is also a member of the American Medical Associa-

tion. He contributes frequently to the leading American medical journals.

*Albert E. Teague.*

TEAGUE, Albert E., of Indianapolis, Ind., was born on a farm near Camden, Preble county, Ohio, July 17, 1858, and is of French and German parentage. His boyhood days were spent upon the farm, and his early education acquired at the public schools of Camden. He began the study of medicine under Dr. George W. Homsher, of Camden, Ohio, entering the Eclectic Medical Institute of Cincinnati, Ohio, from which he graduated June 6, 1892, taking a special course upon the nose, ear and throat under Professor Satler, and receiving certificates for special courses taken in obstetrics; also, eye and ear. After completing his education he began a general practice at Indianapolis, where he still continues work in the same field. During the term of 1892 and 1893 he was Demonstrator of Anatomy for the Eclectic College of Physicians and Surgeons. Since 1896 he has served the Indiana Eclectic Medical Association as its treasurer. The subject of this sketch was married to Dr. Mabel Madsen, daughter of Mary M. Madsen, M. D., on March 8, 1893, she having graduated in medicine the preceding January, and immediately began the work of a general practitioner, and has been engaged in the same for the last five years, but devotes especial attention to office and consultation practice.

HODGES, Frederick J., of Ashland, Wis., was born in Lawrence, Mich., November 11, 1865. He was educated in the public schools of the State, and graduated from the Michigan Agricultural College, Lansing, Mich., in 1884, being the youngest student that ever had graduated from the institution. He then took a post-graduate course in the Michigan University, and graduated in medicine from the Chicago Medical College (Medical Department of the Northwestern University) in 1888. In the competitive examination of that year for positions on the resident staff of Cook county

he secured third place (eight positions), and served a year and a half in that institution. After leaving the hospital he was made attending surgeon to the hospital and to the South Side Dispensary, Demonstrator of Anatomy in the Chicago Medical College and assistant to Dr. Senn in the Chicago Polyclinic. In January, 1892, Dr. Hodges removed to Anderson, Ind., and opened the first hospital of Madison county. This was in 1895 merged in the newly established Holy Cross Hospital (St. John's), and he was made attending surgeon and chief of staff. At this time he was Professor of Genito-Urinary Surgery in the Fort Wayne College of Medicine, and one of the editors of the *Fort Wayne Medical Magazine*. From 1896 to 1898 he was lecturer on surgery in the Central College of Physicians and Surgeons, Indianapolis. From 1891 to 1898 he was chief surgeon of the Chicago and Southeastern Railway. He is a fellow (and during 1897 and at present is editor) of the *American Academy of Railway Surgeons*. From 1895 to 1898 he was secretary of the Delaware District Society. Dr. Hodges is at present surgeon to Rinehart Hospital, Ashland, Wis., surgeon to the Wisconsin Central Lines and managing editor of the *Western Clinical Recorder*. Beside the organizations named, he is a member of the American Medical Association, Chicago Pathological Society, Alumni Association of Cook County Hospital and Ashland County Medical Society. He was married March 16, 1890, to Josephine Chesley, of Chicago, and they have had four children born to them, the eldest of which died in infancy. Paul Chesley and Virginia Clay Hodges

*Fred J. Hodges.*

were born January 6, 1893, and Fred. Jenner Hodges, Jr., was born December 19, 1895. Dr.

Hodges is a lineal descendant of Edward Jenner on his mother's side and on his father's of Silas Hodges, surgeon on the staff of Gen. Washington.

SCOTT, John Joseph, of Shreveport, La., was born October 23, 1837, at Scott's Ferry, Savannah River, Edgefield District, S. C. He is the great-grandson of Samuel Scott, a North-of-Ireland gentleman who, with his wife, Jane (Calliham) Scott, a Scotch lady, obtained a grant of land from King George III, and settled on the Savannah River, at the place still known as Scott's Ferry, S. C., and who, prior to the Revolution, cast his lot with the colonists in their struggle for liberty. This ancestor was known as "Ready Money" Scott, and being too old and infirm to do active service, aided the struggle with his money. The great-grandmother, Joyce Scott, learning that the Tories were in the country, rode fifty miles on horseback to inform the Americans of their whereabouts, and for this act all their property at Scott's Ferry was destroyed and she was severely punished by a "ducking" in the river. He is also the great-grandson of Joseph W. Collier, a captain in the Revolution, and his wife, Amy Mosely) Collier who moved from Charlotte county, Virginia, to South Carolina in 1783, at which time and place his grandfather, Hillary Mosely Collier, was born; his wife was Frances (Quarles) Collier. He is also the grandson of Samuel Scott, Jr., and Mary (Baker) Scott, the son of Samuel Calliham and Martha (Collier) Scott. Edward Mosely, father of Amy (Mosely) Collier, was also a captain in the Revolutionary army—*vide* Revolutionary Records at Smithville, Charlotte county, Virginia. Dr. Scott was educated in the common schools of the country at that time, and, later, a regular English and Latin course. He commenced the study of medicine in 1854, with the family physician, Dr. Thomas H. Pattison, in Edgefield District, S. C.; attended two courses of medical lectures at the Medical College of Georgia, Augusta, from which he was graduated March 3, 1856. During the balance of the year 1856 he practiced his profession in Columbia county, Georgia, ten miles north of Augusta, with Dr. J. T. Smith. In the fall of 1857 he received the appointment of surgeon to General William Walker's expedition to Nicaragua, Central America, which was abandoned in New Orleans, La., and from 1858 to 1861, inclusive, practiced in Red Land, Bossier Parish, La. In the fall of 1861 he volunteered his professional services, without pay or official position, to the Confederate Government, and was stationed at Camp Moore (instruction), Tangipahoe, La. He furnished his own medicine and instruments. On the 1st of January, 1862, the troops were moved to Camp Chalmette, five miles below New Orleans. He was then, by request of Colonel Preston Pond, made acting surgeon of the Sixteenth Regiment, Louisiana Volunteers, pending the appointment of a surgeon, and served until January 16, 1862, when the appointment was effected. During his stay with the command, Ruggles Brigade, he had entire control of all the sick located in the government barracks below the city. Returning to Bossier Parish, a cavalry was soon formed (Bossier Cavalry), mustered into State service, with whom he enlisted as a private on March 15, 1862. The company was immediately transferred to the Confederate Government and moved off to Corinth, Miss., and there with

another company formed the First Squadron, Louisiana Cavalry, and was in General Price's Army of the West. He participated in the Battle of Farmington—was detailed that day as General Marmaduke's orderly. He was in General Beauregard's retreat from Corinth; in the fight at Boonville, Miss., on the retreat, and at Baldwin, Miss. By order of General D. H. Maury, he was discharged from the ranks and was made acting assistant surgeon of the squadron, June 3, 1862. On the 16th of that month the squadron was attached to a regiment. By permission from General Price, Dr. Scott ran the blockade of the Mississippi River, at Cat Fish Point, and on the 15th of October, 1862, again entered the ranks in Company F, Thirteenth Battalion La Partisan Rangers. Was again asked to act as acting assistant surgeon, and continued in that capacity until the battalion was merged in the

*John Joseph Scott.*

Third Louisiana Cavalry. By order of General Hebert he was made surgeon of the post at Delhi, La., during the campaign of General Taylor, opposite Vicksburg, Miss. After the battles of Lake Providence, in which he participated, and Miliken's Bend, he received the appointment of assistant surgeon to the Sixteenth Texas Regiment, Walker's Division, and so served during its entire campaign in South Louisiana, and which was surrendered June 8, 1865. He holds parole No. 535, as assistant surgeon, Shreveport, La., signed by W. R. Boggs, Brigadier-General, C. S. A., and G. L. Andrews, Brigadier-General, U. S. A. At the close of the war Dr. Scott returned to Bossier Parish and practiced medicine there until 1870; was located at Minden, La., from 1870 to 1872; at Benton, La., in 1873 and 1874, and since the latter date at Shreveport, La. Dr. Scott is a member of the Shreveport Medical Society, January, 1877, has held the office of vice-president three terms, and the presidency in 1890; was also delegate to the State Medical Society

in 1890; permanent member of the Louisiana State Medical Society since 1878; member and Louisiana vice-president of the Medico-Legal Society of New York. He is the author of a paper on the "Indirect Toxicological Action of Strychnia," read before the Louisiana State Medical Society at New Orleans, in May, 1894. He was delegated by the board of health of the city of Shreveport to the Atlantic and Gulf States Quarantine Convention, convened at Atlanta, Ga., April 12, 1898, and was chosen Louisiana vice-president of that body. He is also a member of the board of health of the city of Shreveport, and member of the American Public Health Association. At the organization of the grand lodge of Louisiana and Arkansas, Ancient Order of United Workmen, in the city of Shreveport, July 30 and 31, 1896, he was elected grand medical examiner of that order. He is also a Free and Accepted Mason, Knight of Pythias, member of and medical examiner for the Ancient Order of United Workmen, American Legion of Honor, Knights of St. John and Malta, and a member of General Le Roy Stafford Camp No. 3, United Confederate Veterans of Shreveport, and served as commander, term of 1896-97. On August 7, 1897, he was chosen surgeon-general, with rank of lieutenant-colonel, on the staff of Major-General Edward H. Lombard, commanding Louisiana Division United Confederate Veterans, and continued as surgeon-general on the staff of Major-General W. H. Sunnard, now commanding Louisiana Division U. C. V. He is also a member of the National Sanitary Association.

KIRK, Ellen M., of Cincinnati, Ohio, is one of the best known and most successful homeopathic physicians of that city. She was graduated in medicine at the New York Medical College and Hospital for Women, in 1877, since which time she has been actively engaged in the practice of her profession. Dr. Kirk is a member of the American Institute of Homeopathy, Ohio State Homeopathic Medical Society, Cincinnati Homeopathic Lyceum and is attending physician at the Ohio Hospital for Women and Children. Her office is located at 223 West Seventh street, Cincinnati.

KAHN, Lee, of Leadville, Colo., son of Isaac and Mina (Guthman) Kahn, grandson of Moses Kahn, was born July 19, 1867, at Morrison, Ill. In 1879 his parents removed to Leadville, Colo., where he attended the high school and received private instruction. In 1882 he traveled for six months with his mother in Europe. For fourteen months he studied pharmacy, after which he studied under Drs. John Law and S. A. Bosanko. In 1885 he matriculated in Rush Medical College, Chicago, but learning that he would not be allowed to graduate at the close of the three-years' course, on account of being under age, he left the school at the end of the first year, and for one year following was steward at St. Luke's Hospital, Leadville. Returning to Chicago, he completed the course of Rush Medical College and was graduated therefrom in 1889. Since that year he has practiced medicine in Leadville. Dr. Kahn received the honorary degree of A. M. from Ewing (Ill.) College in 1894. He is secretary of the Lake County Medical Association, member of the Colorado State Medical Society, of the American Medical Association, of the Rush Alumni Association and of the American Public Health Association. He was city physician and chair-

man of the board of health, Leadville, 1893, and has been secretary of the United States pension examining board, Leadville, since 1894. He has published a number of papers, and is the inventor of the Lee Kahn applicator and injector manufactured by Tiemann & Co., of New York. He married, May 17, 1890, Miss Ruth Ward, poet and authoress, of Ann Arbor, Mich. They have one child, Milo Ward Kahn, born July 1, 1892.

MADSEN, Mary M., of Indianapolis, Ind., was born in Germany January 2, 1851, and while yet an infant her father removed to this country, settling in the city which is her present residence. Here she received her early education in both German and English. She began reading medicine under Dr. A. J. Smith in 1888, and graduated from the Eclectic College of Physicians and Surgeons in 1891 with high honors, receiving in her first year's study a certificate of honor for anatomical work, and

*Mary M. Madsen.*

being selected by her class as valedictorian and delivering at the graduating exercises the farewell address. Not being satisfied with the knowledge acquired, she again entered college, making a special study of the eye and ear, receiving a certificate of proficiency in this branch of medical study, and then established herself in the general practice of medicine. Her office, located at 116 North Senate avenue, Indianapolis, is fitted up with all the modern facilities for the treatment of disease, and where she is associated with her son-in-law and daughter, Drs. A. E. and Mabel Teague.

THOMASON, Henry Denney, of Albion, Mich., was born in Dayton, Ohio, in 1858. He is a lineal descendant on his father's side of the great scientist and discoverer, Sir Joseph Priestly. He received the foundation of his education in the private schools of Cincinnati, Ohio, and Poughkeepsie, N. Y. He was graduated with honor from the Pennsylvania Military College, and four years later from the University of

Pennsylvania; after some time spent in the Pennsylvania Hospital, in active preparation of practical work, he removed to Albion, Mich., where he has since been engaged in his profession. Dr. Thomason has twice been elected mayor of the city of Albion, and for eight years has been a member of the pension board. He is a member of the American Medical Association, Michigan State Medical Society, Calhoun County Medical Society and is acting surgeon to the railroads touching at Albion. Dr. Thomason is a contributor to various medical journals. He is a Knight Templar and a member of the Uniform Rank of Knights of Pythias.

KELLER, Amelia R., of Indianapolis, Ind., is of German descent, and was born in Cleveland, Ohio, January 12, 1871. Her preliminary education was finished at the Indianapolis High School, and at the age of seventeen years she began the study of medicine under Dr. Wm.

*Amelia R. Keller*

B. Fletcher, one of the most eminent physicians of Indiana, remaining under his preceptorship four years. She then attended courses of instruction at the Central College of Physicians and Surgeons at Indianapolis, and received the degree of Doctor of Medicine from that institution in 1893. Dr. Keller has held the Chair of Clinical Gynecology in the Central College of Physicians several years, and is consultant physician to the Indiana Hospital. She has been located at 628 South Meridian street since 1893, where she has established herself in a large and successful general practice of her profession.

JACOBI, Mary Putnam, of New York City, daughter of George Palmer and Victorine (Haven) Putnam, granddaughter of Henry Putnam, was born August 31, 1842, in London, Eng. Her parents, both of New England birth, returned to America in 1847, and her first schooling, other than from her mother, was obtained at the Twelfth street public school,

New York City, where she went at the age of fifteen. She began the study of medicine in 1859, in New York City, under the preceptorship of Dr. James L. Brown; attended lectures at the Woman's Medical College of Pennsylvania, Philadelphia, from which she was graduated M. D. in 1864, having previously matriculated in the New York College of Pharmacy, and graduated thence in 1862, being the first woman to receive a diploma from that institution. In 1866 she went to Paris, and was the first woman to be admitted to the *École de Médecine*, from which she was graduated in 1871. Dr. Putnam-Jacobi has practiced medicine in New York City since 1872. She is a member of the Medical Society of the County of New York, of the New York Pathological Society, of the New York Neurological Society and of the New York Academy of Medicine, having been the first woman to be admitted as a member. She was physician to the out-door department of Mount Sinai Hospital from 1873 to 1882; Professor of Diseases of Children, New York Post-Graduate Medical School and Hospital, from 1881 to 1884; Professor of Therapeutics, Woman's Medical College of the New York Infirmary, from 1872 to 1888; visiting physician to the New York Infirmary since 1880, visiting physician to St. Mark's Hospital since 1893 and medical examiner for the Equitable Insurance Company since 1891. In 1874 Dr. Putnam-Jacobi was elected president of the Association for the Advancement of the Medical Education for Women, and continues to serve in that capacity. She was the first to formulate, definitely, a cyclical theory of menstruation, and to associate its details with those of clinical and anatomical facts; upon this she also formulated the general theory for the treatment of endometritis. She made an extensive experimental study of the effects of cold pack and massage in the treatment of anemia, anticipating in several respects the results announced a few months later by Weir Mitchell in his essay on "Fat and Blood." Her article on "Cold Pack and Anemia" appeared in the *Archives of Medicine* in 1880. She also wrote a paper on the "Pathogeny of Infantile Paralysis," May, 1874, read before the Medical Society of the County of New York, December, 1873, and which contained the first collection of recorded autopsies of this disease; an original essay on "Buhl's Disease," 1878; "Trephining the Sternum," 1881; "Dermoid Cysts," 1883; "Studies in Endometritis," 1885; "Menstrual Subinvolution," 1885; "New Theory of Menstruation," 1885; "Electricity for Uterine Fibroids," 1888; "Intra-Uterine Therapeutics," 1889, *American Journal of Obstetrics*; "Septicemia and Pyemia," 1872 (being the first paper to be read by a woman before a medical society in the United States); "Microcephalus," 1875; "Hysteria," 1883; "Congenital Ptosis," *New York Medical Record*, 1894; "Quinine and the Cerebral Circulation," *Journal of Obstetrics*, 1879; "Fibroid of the Uterus," *American Journal of the Medical Sciences*, 1880; "Case of Rotary Spasm," *Journal of Mental and Nervous Diseases*, 1880; "Specialism in Medicine," *Archives of Medicine*, 1882; "Infantile Paralysis," 1885; "Pseudo-Muscular Hypertrophy," *Pepper's Archives of Medicine*; "Primary Education," *Popular Science Monthly*, 1886; "Brain Tumor," Wood's Reference Handbook; "Loss of Names in Aphasia," *Journal of Mental and Nervous Diseases*,

1886; "Quinine in Pneumonia," *New York Medical Journal*, 1887; "Place of Language in the Curriculum of Education," *Journal of Psychology*, 1888; "Empyema," *Medical News*, 1890; "Spinal Myelitis in Children," Keating's Cyclopædia, 1890; "Case of Tumor of the Spinal Cord," *International Medical Journal*, 1890; "Electricity in Diseases of Childhood," Cyclopædia of Electro-Therapeutics, 1893, and an essay on the "Question of Rest for Women During Menstruation," for the Boylston prize of Harvard University, 1876. Married, 1873, Dr. Abraham Jacobi, of New York City. They have had three children.

WILSON, William Virgil, of West Haven, Conn., son of Elisha and Julia A. (Benjamin) Wilson, grandson of Hiram Wilson, was born at Milford, Conn., December 26, 1845. He re-

ceived his preliminary education at the Lancasterian and Eaton schools, at General Russell's Military Academy, and Hopkins grammar school, New Haven, Conn. He commenced the study of medicine in 1864, at New Haven, with T. Beers Townsend, M. D.; attending three summer and three winter courses of medical lectures at Yale Medical School, and was graduated July 20, 1867. His first location in the practice of medicine was at Brooklyn, N. Y., where he remained two years, and was then fifteen years at South Brunswick, N. J.; at Willington, Conn., two and a half years; and at West Haven, Conn., six years, to the present time. He is a member of the Connecticut State Medical Society; president of the United States Medical Practitioners' Protective Alliance; at one time member of the New Jersey State Medical Society; and also president one year of the Middlesex County (N. J.) Medical

Association. He was surgeon for the Pennsylvania Railroad at Monmouth Junction, N. J., for several years; member board of burgesses of West Haven, Conn., 1889-90; town clerk of South Brunswick, N. J., 1874; the first chief engineer of West Haven (Conn.) Fire Department, 1892-93. He is a Mason, and a member of Annowan Lodge, No. 115, West Haven; Royal Arcanum; Savin Rock Council, No. 1068; and General Kimberly Council, No. 76, O. A. U. M. He took a short post-graduate course at Columbia College, and one at Bellevue Hospital Medical College. He was the inventor of the hollow suppository in 1868. Married, Nellie H. Brayton, November 7, 1867. She was the only daughter of William P. Brayton, North Adams, Mass. Their children are, Philip E., Nellie A., Annetta and Bessie Wilson. One daughter, Cornelia Gertrude Wilson, deceased.

BRAYTON, Sarah H., of Evanston, Ill., daughter of John and Mary (Fleming) Brayton, granddaughter of Thomas Brayton, was born in Sebergham, near Carlisle, Cumberland, Eng., January 25, 1850. She was educated at Greystoke, Eng., and in Blencowe, Eng., grammar school. Coming to this country in 1867, she took up the study of medicine in the office of Dr. S. S. Nivison, of Dryden, N. Y., in 1870; attended three courses of lectures at the New York Free Medical College for Women, and was graduated in April, 1875. She commenced the practice of medicine the same year, in New York city, remaining there until 1882, and since that time in Evanston, Ill. Dr. Brayton is a member of the Illinois State Medical Association, Chicago Medical Society, American Public Health Association, Association for the Advancement of Science, American Academy of Political and Social Science, Chicago Fortnightly Club and of the Chicago Women's Club. Dr. Brayton was resident physician in the Woman's College of the Northwestern University, Evanston, Ill., from 1883 to 1885; and Professor of *Materia Medica and Therapeutics*, New York Free Medical College for Women, during 1876 and 1877. She was a delegate from the World's Congress Auxiliary of the Columbian Exposition to the Seventh International Congress of Hygiene and Demography, London, August, 1891. The World's Congress Auxiliary of the Columbian Exposition, also, appointed Dr. Brayton chairman of the Woman's Committee of the International Congress of Public Health, held in conjunction with the annual meeting of the American Public Health Association, Chicago, October, 1893.

ENGERT, Rosa Henrietta (Sehreiner), of Chicago, Ill., daughter of Johan Peter and Erneste Babette (Milenz) Sehreiner, granddaughter of Christopher Sehreiner, was born December 27, 1828, at Amberg, Bavaria. Her father, a Bavarian officer, entered the civil service in 1829, and was sent to the French frontier on the border of the Rhine, as controller in the revenue service. When a young man he began to read medicine, but his studies were interrupted on account of his being forced to enter the army in the war against Napoleon; yet, while at the revenue post, many miles from a physician, he frequently gave the first attendance in emergency cases among the people of the country. Rosa, being her father's favorite, both through his example and early instruction, developed a deep interest and love for the study of natural science, and was impressed

with the importance of a knowledge of medicine, as well as with a love of benevolent work. Her father instructed her in botany, giving the medicinal qualities of plants and minerals; also, taught her how to attend cases of accident among the wood-choppers, miners and fishermen forming the population in the vicinity of his post. So deep were the impressions of this early training, that she had but one desire—the wish to be a boy in order to be permitted to study medicine, and go to foreign countries to see the world abroad. However, these desires did not meet with approval of her parents, who, after the good old-fashioned view, maintained that a girl did not need anything but common school education, some knowledge of languages, a little music, needle work, fancy work, some drawing and painting, and above all, the art of housekeeping and cooking; so whatever she could get in the line of natural history had to be done during leisure hours. After her mother died, when her father contemplated a second marriage, she decided to come to America, and landed on the 1st of January, 1850. Here she lived with her oldest brother in St. Louis until her marriage in September, 1851, to Sebastian Engert, of the firm of Wolff & Engert. She continued her private studies until the war broke out, when Mr. Engert enlisted in Siegel's regiment as quartermaster. Now being free to follow her own will, she began the study of medicine under Dr. Ludwig Bernays, of St. Louis. In 1862 she went to Wurzburg in order to enter the Woman's Hospital of that university for the purpose of gaining practical instruction. Her admission to this was through favor which could be obtained only by the personal interest which Professor Scanzoni and Professor G. W. Schmidt, his first assistant, took in her. After signing a document to the Cultus Ministerium, that she, being a citizen of the United States, would never attempt to practice medicine in Europe, she was admitted. In 1863 she returned to America, and passing through Chicago on her way to St. Louis, was impressed with the prosperity and enterprise of that city, and decided to make it her future home. Dr. Ernest Schmidt introduced her to some of his families. Dr. Louis Wagner, also a practicing physician, took a kind interest in her success. At that time the existing prejudice against women in medicine was so great that one agent refused to rent an office to her, saying that "Before he would rent the office to a female physician he would have it vacant all the year." When Dr. William H. Byford, who is known for the great interest he has taken in the medical education of women, founded the Woman's Hospital of Chicago, Dr. Rosa H. Engert matriculated in 1871, and graduated in 1873. In the spring of 1875 she was appointed visiting surgeon to the Hospital of Women and Children. In 1876 she went abroad and took a course in pathological anatomy and microscopy at Zurich. Returning in 1877 she became Instructor in Physiological and Pathological Microscopy in the Woman's Medical College; was visiting physician to the Home for Incurables from 1877 to 1879 and from 1885 to 1889. She was connected with the Emergency Hospital, to which she devoted much time. Dr. Engert is a member of the Chicago Medical Society, the Medical Society of the State of Illinois, the Chicago Medico-Legal Society and of the American Medical Association. She has a keen

perception of the gratitude one should feel for liberal sentiments toward women in America respecting the rights of the individual irrespective of sex, giving to each equal opportunity to make as much of himself or herself as one has ability.

STEWART, John W. G., of Wabash, Ind., was born in Wabash county, that State, but is of Scotch-Irish lineage. After receiving a liberal preliminary education he began the study of medicine under the preceptorship of W. A. Dunn, M. D., and at the Hahnemann Medical College and Hospital, Chicago, Ill., and was graduated M. D. from that institution February 20, 1889, and his medical education was supplemented by a special course in orthopedic surgery at the Chicago Homeopathic College, in 1895. Dr. Stewart has been engaged in an active and successful general practice of medicine and surgery in the city of his present resi-

*John W. G. Stewart*

dence for the last nine years, giving especial attention to the treatment of various deformities and bone surgery, in which line of practice he has had excellent success. He has been a member of the Indiana Institute of Homeopathy since 1890, and is now a member of the board of censors of that institute, and has been a member of the American Institute of Homeopathy since 1892. He is also a member of the Knights of Pythias, and is examining physician for several fraternal organizations. Dr. Stewart married February 27, 1889, Nora Maud Gillen, youngest daughter of Dr. H. H. and Mary Gillen. Two sons have been born to them. Their eldest son, Lawrence Gillen, is a healthy, robust boy of eight years; the youngest son, Bruce Maurice, died on May 27, 1898, from an attack of inflammation of the brain.

BLOYER, William E., of Cincinnati, Ohio, graduated in medicine from the Eclectic Medical Institute, Cincinnati, in 1879, and is now Professor of Anatomy and Clinical Medicine in

the Eclectic Medical Institute. Dr. Bloyer is also an ex-president of the National Eclectic Medical Association, Ohio State Medical Society and Cincinnati Eclectic Medical Society and is editor and publisher of the *Medical Gleaner*, which is recognized as one of the leading journals of the eclectic school of medicine in the United States. Dr. Bloyer's office is located at 1526 Elm street, Cincinnati, where for many years he has been engaged in a large consultative and general medical and surgical practice.

CUNNINGHAM, Earsom Mills, of Chicago, Ill., was born at Warrington, Hancock county, Ind., on the 14th day of February, 1868. He received his education in the schools of Pendleton and Indianapolis, Ind. He studied telegraphy in Philadelphia, Pa., and in 1887 he commenced the study of medicine, with his father as preceptor and the Indiana Medical College as his

*Earsom Mills Cunningham.*

alma mater, and graduated from that institution in 1892. He remained with his father a few months after graduation, and then located in Chicago, Ill., and is still in that city. He married Miss Kate Crosby, of Indianapolis, Ind., in July, 1891. He is a member of the Western Association of Writers; also of the Masonic Order. Within the past two years he has paid special attention to ophthalmology.

CARDWELL, Mae Harrington, of Portland, Ore., born July 23, 1857, at Cherry Hill, Pa., is the daughter of Moses and Harriet (Patterson) Harrington, granddaughter of Matthew Harrington. After a preparatory course at the Albion (Pa.) Academy, she matriculated in the Medical Department of Willamette University, Portland, Ore., in 1881, and after three courses of lectures was graduated in 1885. Six months of the years 1886 and 1887 she spent in post-graduate work in the New York Polyclinic, and then commenced the practice of medicine in Portland, Ore. Dr. Harrington-Cardwell is a member of the Oregon State Medical Society,

treasurer since 1892; of the American Medical Association, of the Ladies' Relief Society and the Woman's Exchange, charitable organizations of Portland; physician to the Open Door, Working Girls' Home, and was physician to the children's ward of the Portland Methodist Hospital from 1887 to 1892, when she resigned the position. Dr. Harrington-Cardwell has been first assistant in more than one hundred colectomies, has done many operations in plastic work on the female, has operated for empyema and hip-joint diseases in children and has presented a dozen or more papers on these subjects to the Oregon State Medical Society. Married, in 1895, J. R. Cardwell, D. D. S.

DICKEY, Andrew Spence, of Tipton, Ind., was born September 7, 1850, in Fayette county, Indiana. He was the second son of Hugh Dickey and Hannah (Manlove) Dickey. His father was of Scotch-Irish descent, and his ancestors came to this country about the middle of the eighteenth century. His mother descended from a follower of George Fox, who fled with others from North Wales during the persecution of the Quakers and landed on American soil in the latter half of the seventeenth century. Both of his parents were of strong Presbyterian faith. When the subject of this sketch was two years of age, his father moved his family, consisting of wife and an older son, George Albert, to Tipton county, Indiana, a section then abounding in dense forests and swamps, and from which the Indians and wolves were just receding. The boys were kept in school whenever opportunity, though primitive and meager, was afforded. They were afterwards placed in the public schools of Tipton, La Porte and Waveland Academy, all in Indiana. Dr. Dickey never married, but made his home with his parents on the farm until he began the practice of medicine. He entered the Indiana State University at Bloomington, Ind., in 1873, from which he took his degree of A. B. in 1877. The next year he taught in the public schools of Tipton, Ind., and began the study of medicine under Dr. M. V. B. Newcomer, the accomplished physician and surgeon of that city, and took his first course of lectures in the Miami Medical College, Cincinnati, Ohio, in 1878-79, completing his course in the Central College of Physicians and Surgeons of Indianapolis, and was a member of one of its first classes. The editor of this work was a member of the Faculty at the time of his graduation in 1881, and knows that in the various branches of medicine he was reckoned as one of the most proficient students in that institution. After receiving his medical degree Dr. Dickey formed a co-partnership with his preceptor, Dr. Newcomer, and he has been associated with that eminent physician in a large and successful general medical and surgical practice for the last seventeen years. He gave instruction in histology and microscopy one year in the medical college from which he graduated, and was for some years a member of the board of trustees of the same college. He was for a number of years a member of the board of examining surgeons for pensions at Tipton, Ind., and he has been the health officer of Tipton county since the organization of the Indiana State Board of Health, with the exception of one year, and for many years he has been a member of the health board of the city of Tipton. He has a membership in the Tipton County Medical

Society, the Indiana State Medical Society, the American Medical Association, and the Missis-

*A. S. Dickey*

issippi Valley Medical Association. His achievement in the practice of medicine and surgery has been above the ordinary.

BASCOM, Francis Sanburn, of Salt Lake City, Utah, born July 8, 1857, in Rock Island, Ill., is the son of Carlos Lyman, a native of Shoreham, Vt., and Emily (Sanburn) Bascom, and grandson of Reuben Bascom, born in Newport, N. H. His direct ancestors emigrated to America with the early Puritans and were descended from a French Huguenot family. He received his preliminary education in the public and high schools of Rock Island, matriculating in Rush Medical College, Chicago, in 1879, and after three courses of lectures, was graduated March 1, 1882. Having served as interne in Cook County Hospital, Chicago, for a few months he accepted a government appointment at the Nintah Indian Agency, Utah (now Fort Duchesne), filling the position of physician at this post in years 1882-'83. One year, 1883-'84, he spent in special study in the hospitals of Vienna, London, and Edinburgh, and since returning to the United States has been engaged in the practice of medicine and surgery in Salt Lake City. In that city he has been medical director of and gynecologist to St. Mark's Hospital since 1893; surgeon to the Rio Grande Western Railway, since 1886, and in 1892 was appointed by the Governor of Utah, a member of the Territorial Board of Medical Examiners, in which capacity he served until the reorganization of the board in 1894.

Dr. Bascom is a member of the American Medical Association, Fourth Vice-President, 1894-'95; of the National Association of Rail-

way Surgeons; of the Salt Lake County Medical Society, President in 1890; and of the Salt Lake Academy of Medicine. In February, 1895, he was elected President of the newly organized State Medical Society of Utah. He also represented Utah as a Vice-President of the Pan-American Medical Congress, 1893.

His literary work has been confined to statistics of practice in the Indian service, furnished chiefly for government publications, and to magazine articles on climatology and general practice.

In 1884 he married Miss Anna L., daughter of J. J. Critchlow, of Salt Lake City. She died in November, 1894, leaving no children.

CROFT, Theodore Gaillard, of Aiken, S. C., son of Theodore Gaillard and Eliza Webb (D'Oyley) Croft, grandson of Edward Croft, was born July 10, 1845, at Greenville, S. C. His preparatory education was gained at Furman University, Greenville, S. C., at the Military Academy, Charleston, S. C., and at the University of Virginia, Charlottesville, Va. In 1872 he commenced the study of medicine, at Aiken, S. C., with Wm. H. Geddings; took two courses of lectures at the Medical College of the State of South Carolina, Charleston, and received his degree therefrom in March, 1875. His entire professional life has been passed in Aiken.

Dr. Croft is a member of the South Carolina Medical Association; of the American Medical Association; of the Board of Health of Aiken from 1877 to 1892; chairman of the sub-State Board of Health of South Carolina since 1882; and surgeon of the First Regiment, South Carolina Volunteers. He served as a non-commissioned officer, Confederate States army, war of the rebellion, from 1861 to 1865.

Married, in 1877, Miss Mary Ella Chafee, of Aiken, S. C. Their children are: George W.,

*Theodore Gaillard Croft.*

Mary Chafee, Theodore Gaillard and Florence Ella Croft.

WILSON, Hubert W., of Michigan City, Ind., is of English lineage. After receiving a

*Hubert W. Wilson.*

liberal preliminary education he began the study of medicine, and completed his professional education at the University of Michigan, Department of Medicine and Surgery, Ann Arbor. He received his medical degree from this institution in 1892, since which time he has been located in the city of his present residence, engaged in an active and extensive practice of medicine and surgery. He ranks as one of the most prominent medical men of northern Indiana. His office is commodious, and well arranged with all modern appliances and facilities for treating patients. Dr. Wilson is a member of the La Porte County and the Indiana State Medical Societies, and is now associated with Dr. E. L. Annis and Dr. Horace Wardner as a member of the board of censors of the former organization.

BROCKWAY, Vira (Abel), of Chicago, Ill., was born October 22, 1856, in New Philadelphia, Ohio, is the daughter of George William and Mary Anne (Wise) Abel, granddaughter of William Abel, and grandniece of Governor Wise, of John Brown fame. She obtained a preparatory education in the High School of Richland Center, Wis., and at the Normal School of Whitewater, Wis.; commenced the study of medicine in 1882, at Racine, Wis., under Dr. A. H. Hoy; matriculated in the Northwestern University Woman's Medical School, Chicago, in September, 1883, and after three full courses of lectures, was graduated therefrom April 7, 1887, receiving the highest prize, fifty dollars in gold, and a certificate of honor. In April of the same year, Dr. Brockway commenced the general practice of medicine at her present residence, Campbell Park, Chicago. She is a member of the Illinois State Medical Society, of the Chicago Medical Society, of the Chicago Pathological Society, of the Chicago Gynecological Club, vice-presi-

dent in 1889; has been assistant lecturer on histology and director of histological laboratory, in her alma mater since 1891; attending physician to the dispensary, Hospital for Women and Children, and free dispensary at Woman's Medical College. Contributions to medical literature are confined to reports on cases published in various medical journals. Married, July 3, 1872, Mr. George L. Brockway, of Whitewater, Wis. Their three children are, Emma Mae, Carrie Eugenie and Grace Louise Brockway.

SMITH, Thomas William, of Bethel Academy, Fauquier county, Virginia, son of Anderson Doniphan and Susan Ficklin (Norman) Smith, grandson of Col. William R. Smith, was born October 9, 1855, at Afton, Va. After graduating from Bethel Classical and Military Academy in 1870 he received private instructions in Latin and German. In 1873 became an office student of Dr. A. A. Marstetler, Washington, D. C.; in 1874, 1875 and 1876 was a private student under Professor Opie, Baltimore, Md.; was graduated from College of Physicians and Surgeons, Baltimore, in 1876; from the University Medical College, New York City, in 1877, and received private instructions under Professor A. L. Loomis, in Bellevue Hospital, 1877. Immediately after graduating in 1877 Dr. Smith accepted the position of physician to and instructor in the sciences and elementary course of medicine in the Bethel Classical and Military Academy, Virginia, which he still holds. He is a member of the Northeast Virginia (county) Medical Society, president in 1891, and of the Medical Society of Virginia and member of its necrological committee. He was associate editor and editor of the *Virginia Medical Advance*, 1888-92, and contributed

*Thomas William Smith.*

articles to other medical journals from time to time. Dr. Smith is an active member of the

Young Men's Christian Association, and an official member of the Methodist Episcopal Church. He married, September 15, 1886, Miss Mary J., daughter of M. C. Blackwell, of Fauquier county, Virginia. Their two children are Emily Norma and Anderson Carter Smith.

HASENCAMP, Oscar, of Toledo, Ohio, is one of the best known and most successful physicians of that city. He received his medical degree from the Medical Department of the University of Tennessee, Nashville, in 1887, since which time he has been actively engaged in the general practice of medicine, and has devoted especial attention to the study of electro-therapeutics, and is considered an authority upon that branch of medicine. Dr. Hasencamp is now Professor of the Principles of Medicine and Electro-Therapeutics in the Toledo Medical College and is physician to St. Vincent's Hospital, ex-president of the Toledo Medical Association, member of the Toledo Microscopical Society, Northwestern Ohio Medical Association, Ohio State Medical Association, Tri-State Medical Association and of the American Medical Association. He is also medical examiner for several life insurance associations and fraternity organizations. His office is located in the Liberty Hall Building, corner of Cherry and Ontario streets, Toledo.

CRAWFORD, John M., of Cincinnati, Ohio, was graduated M. D. at Pulte Medical College, Cincinnati, in 1878. He is now Professor of Diseases of the Nose, Throat and Lungs in this institution. He is a member of the American Institute of Homeopathy, Ohio State Homeopathic Society, Cincinnati Lyceum, ex-president of the Western Academy of Homeopathy, member of the Miami Valley Medical Association and physician to the Home of the Friendless. His office is in the Neave Building, Cincinnati, where he is engaged in his special line of practice, which is extensive, in the successful treatment of nasal, laryngeal and pulmonary diseases. His reputation is believed to be second to no other physician in his city.

GLAESER, Bertha Lund, of Cincinnati, O., was born in that city, September 28, 1862. She was the daughter of Charles A. Lund, a native of Stockholm, Sweden. He was educated in the University of Lund, county of Lund, Sweden. The picture which accompanies this sketch is made from a late photograph of probably the most successful woman physician in the United States, a member of the American College of Sciences, visiting surgeon of leading hospitals, the possessor of an income from her profession reaching close up to \$25,000 per annum, and enjoying a reputation in surgery among the greatest leaders who have achieved eminence with the knife.

When the subject of this sketch was a little girl her mother died, and her father having taken unto himself another helpmate, her home was not pleasant, and she was in early life thrown upon her own resources. Her education was received in the public schools of her native city. When quite young she married Andrew Glaeser, and in a few years became a widow, with three young children, to whom she displayed all a mother's love. Her step-children never felt a mother's loss, for to them she devoted herself, and to-day two are married, the oldest son remaining with her. While caring for these helpless ones, she took up the study of medicine under her medical preceptor, Dr. Joseph Roberts Clausen, and later entered the

"Woman's Medical College" in Philadelphia. She remained three terms, and there served one and a half years in its clinic. Later she attended one year in the Cincinnati School of Medicine and Surgery in the "woman's section." This was later organized as the "Woman's Medical College of Cincinnati," and it is now the "Laura Memorial."

Here she lectured for five years on the subject, "Diseases of Children." She holds the position of "medical examiner" for the Massachusetts Mutual Life, and also the Masonic Widows' and Orphan's Relief of Toledo, O. In 1895 she went abroad and studied in such noted schools as the hospitals of Vienna, Berlin, Dresden and London; returning to America, she resumed her practice, devoting herself exclusively to women and children. Her practice is very extensive, and has been quite successful. She is a member of "The Academy of Medicine of

*Bertha Lund Glaeser.*

Cincinnati," of "Ohio State Medical Association," and the "Columbus Pediatric Society." At the early age of thirty-six years she has reached an advanced position in her chosen profession, and is often called into consultation by her male colleagues.

As a woman, she is held in high esteem for her purity of character, and her well-known benevolence in never refusing to treat the poor, who are constant recipients of her services, which has placed her in the first rank among philanthropists. In all her career she has retained the characteristics of a noble woman, to which she has added the graces of education, refinement and culture. Such, in brief, are some points in Dr. Glaeser's life. They do her but scant justice, but are put on record by one who admires the indomitable spirit of the woman, who, in spite of adverse circumstances, has forged her way to the front.

HOLMES, Christian R., of Cincinnati, Ohio, is one of the most distinguished specialists of that city. He received his medical degree at the Miami Medical College, Cincinnati, in 1886.

He was resident physician to the Cincinnati Hospital during 1885 and 1886, since which time he has served as ophthalmic surgeon to the same institution. Dr. Holmes is now Professor of Otology in the Miami Medical College, Professor of Ophthalmology in the Laura Memorial College and Presbyterian Hospital. He is ex-president of the Cincinnati Medical Society, member of the Cincinnati Academy of Medicine, Mississippi Valley Medical Association and of the American Medical Association. His private ophthalmic and aural hospital is located at 8 and 10 E. Eighth street, Cincinnati.

POPE, Curran, of Louisville, Ky., is a native of that city, and was born on the 12th day of November, 1866, in the old Pope residence on Walnut street, in which the Pope family have lived for the past sixty-eight years. He is the eldest son of the late Judge Alfred T. Pope, a distinguished member of the Louisville bar, and a grandson of Colonel Curran Pope, who gallantly fell at the head of his troops in the bloody battle of Perryville. The subject of this sketch received a liberal education in the common and high schools of his native city, and, after leaving school, traveled extensively with his parents, through the various countries of Europe. After an absence of nearly two years he returned and entered mercantile life, where he remained three years, acquiring during that time an extended knowledge of business methods. At the end of this time he commenced the study of medicine in the University of Louisville, from which school he graduated. Realizing the need of clinical instruction, he took extended courses of instruction in the various schools and clinics of New York. While in New York he was tendered the position of resident physician to the Anchorage Insane Asylum, at Lakeland, Ky., which he accepted and at once returned to assume his new duties. After a stay of some length as physician to the asylum, he tendered his resignation and sailed for Europe. He visited and studied under the master minds of neurology in London, Paris, Vienna, Berlin and Frankfort-on-the-Main. Returning to his native city, he commenced the practice of his specialty, diseases of the mind and nervous system, and immediately took high rank in his profession. In 1891 he filled the chair of histology, bacteriology and clinical microscopy in the hospital college of medicine, the medical department of Central University. In 1892 the Louisville Medical School having tendered him a professorship on diseases of the mind and nervous system, he resigned his former position to accept the latter, this being in the direct line of his special practice and a more congenial line of work. Dr. Pope is the pioneer of mechanical massage and hydrotherapy in the South, and has invented some useful appliances in this field of work.

He is located at 111 and 113 West Chestnut street, Louisville, and has a private sanitarium for the treatment of nervous diseases and diseases of the stomach exclusively, especially arranged for the care of such cases as are not amenable to ordinary or home treatment. This sanitarium relies entirely upon the good will of the medical profession for support and maintenance, the institution possessing all the advantages of a luxurious home, together with the appliances of a modern hospital. It offers perfect sanitary conditions, and every facility for the cure of diseased states, including a

corps of graduated regular physicians, trained nurses and massage operators. It is situated in an elevated part of the resident portion of the city, and easily accessible. The buildings are modern and built for this special purpose.

Special attention is paid to the "Rest Treatment," which is carried out in its minutest details, amplified by such dietetic and hydrotherapeutic methods as are suitable to the particular case. Large treatment rooms for the administration of vibratory therapeutics or mechanical massage; especially trained attendants being in charge of the latest and best machines. His sanitarium is fitted with one of the largest, most elaborate and best electrical equipment in the South for the application of the galvanic, faradic, Engleman faradic, static and sinusoidal currents, so arranged and controlled as to permit of the most scientific use of the current known to medicine, in the treatment of all forms of disease, functional or organic.

For the past seven years Dr. Pope has paid especial attention to the administration of water, and possesses the largest and best hydrotherapeutic apparatus in the South for the accurate administration of water to the cure of diseased states. Twenty-seven hundred square feet alone devoted to this treatment.

This is the only institution in the South basing its treatment of diseases of the stomach on a careful consideration of the symptoms and a thorough qualitative and quantitative chemical analysis of the gastric juice.

During the years of 1896 and 1897 he edited the *New Albany Medical Journal*, but resigned the position in 1898 owing to a pressure of business and professional cares. He has written extensively upon his specialty, and some of his results and methods have become incorporated in modern medical works. His writings, as well as his lectures, possess literary ability and show scientific investigation.

He is also consultant neurologist to the Louisville Medical College Hospital and Louisville City Hospital, professor of hygiene in the Kentucky Military Institute, late resident physician to Anchorage Insane Asylum, member of the American Medical Association, Mississippi Valley Medical Association, American Electro-Therapeutic, Central, Southern and North-eastern Medical Associations, Kentucky State and Mitchell District Medical Societies.

He is a prominent member of the Knights of Pythias and the Masonic Order, is unmarried, and though young, possessed of a large and lucrative practice.

SOUCHON, Edmund, of New Orleans, La., born December 1, 1841, in Opelousas, St. Landry Parish, La., is the son of Dr. Eugene and Caroline (Pettit) Souchon, grandson of Charles Souchon, one of the two grenadiers who saved the life of General Napoleon Bonaparte at the siege of St. Jean d'Acre, in Egypt. All his immediate ancestors were of French descent, his father being a practicing dentist for many years in New Orleans, La. Dr. Edmund Souchon attended school in St. Martinsville, La., until twelve years of age, when his parents moved to Mobile, and later to New Orleans, and, his father's health failing, he was taken from the private school where he had been a student, and placed in the public schools, and had also to assist in the support of the family by selling newspapers. After two years his father's health improved, and he was sent to Paris, France, for a collegiate course, which

was completed, and the study of medicine commenced in 1860. Upon the breaking out of the war of the rebellion the monthly allowance from home ceased, and he was obliged from that time to provide for the expenses of his five years' course of medical study. He passed fourth in a list of three hundred and fifty applicants in the competitive examination for the internship of the hospitals of Paris, and was received upon his first trial. When Dr. J. Marion Sims arrived in Paris, for the purpose of demonstrating his operation for vesico-vaginal fistula, he was unable to speak a word of French, and Dr. Souchon became his interpreter and his assistant in performing the operations. The death of Dr. Souchon's father compelled his return to New Orleans sooner than was anticipated, and he was graduated from the medical department of the University of Louisiana in March, 1867. Dr. Sims had given him a letter of recommendation to Dr. T. G. Richardson, who received him most kindly, allowed him a key to his office, the use of books and instruments, invited him daily to his own table, and provided a room for him in Dr. Stone's hospital until he could support himself, and in later years would accept no payment for the privileges. Dr. Souchon became Dr. Richardson's prosector, and later his chief of clinic at Charity Hospital, and also assisted him in private practice for many years. In 1872, Dr. Souchon was elected demonstrator of anatomy in the medical department, Tulane University of Louisiana. In 1885 he was elected professor of anatomy and clinical surgery. He was a member of the board of administrators of Charity Hospital, 1880-'82; the designer of the new Tulane Medical College building and supervisor of its erection, in recognition of which service, the Tulane committee and the medical faculty placed a marble memorial tablet in the entrance hall of the building.

Dr. Souchon is a member of Orleans Parish Medical Association; New Orleans Medical and Surgical Association, of which he was President, 1886; American Medical Association; Southern Surgical and Gynecological Society; and Society of American Anatomists. He has published several surgical articles in the *New Orleans Medical and Surgical Journal*, and has devised a process for making large anatomical and surgical drawings for class demonstrations; he has also invented Souchon's Anesthetizer, used in face and mouth operations. His office is located at 135 Baronne street, New Orleans.

Married, in 1869, Miss Corinne Lavie, of New Orleans. Their children are: Marion Souchon, M. D.; Corinne, wife of H. H. Hodgdon, and Selika Souchon.

**RICHARDSON, David Dorrington**, of Norristown, Pa., third son of Major George Park and Sarah Ann Richardson, and grandson of George Richardson, of Richmond, Va., was born May 11, 1837, in the latter city. His preparatory education was gained at Transylvania University, Lexington, Ky., from the medical department of which he was graduated M. D. at the termination of his third course of lectures in February, 1858. He removed to Philadelphia the following spring and organized the school of preparation for the degree of doctor of medicine and medical staff of the army and navy, which proved to be successful. Dr. Richardson served three years, from 1858 to 1861, as interne in the Howard and Philadelphia hos-

pitals. In 1861 he was appointed resident physician in charge of the Northern Dispensary of Philadelphia, and held the position until December, 1866, when he was appointed superintendent and physician-in-chief of Philadelphia Hospital, department for the insane. In 1871 he was graduated M. D. from the University of Pennsylvania, department of medicine. In 1879 he was appointed superintendent of the State Hospital for the Insane, Warren, Pa., organizing that institution and superintending it until July, 1881, when he was unanimously recalled to Philadelphia Hospital, department for the insane, being his second call to that institution, and from which he retired in 1886 to engage in private practice. In 1889 he was elected first superintendent of the Delaware State Hospital, at Farnhurst, and held the position until October 1, 1893, when he took charge of the male department of the State Hospital for the Insane at Norristown, Pa. Dr. Richardson's interest in anatomy made him a frequent visitor to the dissecting-room, and in 1858 he was appointed demonstrator in the Philadelphia School of Anatomy, of which the late Dr. Hayes Agnew was principal; he continued in that position eight years. In 1886 he was appointed assistant demonstrator of anatomy in the University of Pennsylvania, department of medicine, and so continued until 1890. In 1861 Dr. Richardson published the *Chemical Remembrancer*. In 1876 he prepared for publication "Old and New Notation of Chemistry Reconciled." In 1885 he revised for publication his clinical lectures delivered on insanity in the department for the insane, Philadelphia Hospital. He is a member of the American Medical Association, the American Medico-Psychological Association, the Philadelphia County Medical Society, and the Philadelphia Neurological Society. Dr. Richardson married, in 1860, Margaret Spear Hancker, of Pennsylvania.

**SANFORD, Leonard J.**, of New Haven, Conn., a native of that city, son of Elihu and Susan (Howell) Sanford, grandson of Colonel Elihu Sanford, was born November 8, 1833. He prepared for college in the public and private schools of New Haven; for about a year was a student at the Scientific (now the Sheffield Scientific) School of Yale University; received the honorary degree of M. A. from Yale College in 1858. Commenced the study of medicine in 1851, with Eli Ives, Nathan B. Ives and Levi Ives, all of New Haven, the first named being at the time professor of theory and practice of medicine in Yale College, as he had previously been of materia medica and therapeutics. Dr. Sanford attended one course of medical lectures at the medical department of Yale University, and two courses at the Jefferson Medical College of Philadelphia, and was graduated from the latter, March 11, 1854. After graduating he pursued postgraduate studies for a year in New York city. May 1, 1855, he commenced practice at New Haven, Conn., but after a time went abroad and pursued clinical studies for several months in some of the noted European hospitals. His professional life has been passed at New Haven, where, for about thirty-eight years, he has been engaged in a large general practice of medicine and obstetrics. His office is located at 216 Crown street, in that city. He is a member of the local medical societies of New Haven (city and county), the Connecticut Medical Society, of which for four years he was Re-

ording Secretary, and the American Academy of Medicine. He is a member of the Connecticut Academy of Arts and Sciences, and was its Secretary for two years; is also a member of the American Public Health Association. He was a professor in Yale College twenty-five years, to wit: Professor of anatomy and physiology, from 1863 to 1879; and professor of anatomy from 1879 to 1888. He was also lecturer during most of those years to the academical students of the college on physiology and hygiene; he is at present giving annual lectures on the "Preservation of Health" to the students of the theological department of Yale College, as he has been doing for the past dozen years. During the early years of his practice he was visiting physician to the State Hospital of Connecticut, and in later years has been a member of its consulting staff of physicians and surgeons.

Among his more important published medical papers is one on the "Plastic Constituents of the Blood, in their Physiological and Pathological Relations," *Proceedings Connecticut Medical Society*, 1862; also one on the "History and Anatomy of the Gorilla, with Comparative References to the Anthropoid Apes as a Class," *American Journal of Sciences and Arts*, vol. 33, 1862. In commenting upon the welfare of the sick, Dr. Sanford says: "The question of religious work for the physician is a mooted one; if it is not his duty, it is certainly his privilege, in attendance upon the sick, to have some regard to their spiritual welfare. The discerning physician will readily recognize the cases in which such ministries would be acceptable; more so from him, if he is a Christian physician and has the confidence and affection of his patients, than from the clergyman, whose infrequent visits are often formal and constrained. In this incidental way I have sometimes engaged in religious work. I have never seen patients troubled by efforts to promote their spiritual welfare; they rather are calmed by them, and their chances of restoration to health are in consequence, in some cases, improved."

Dr. Sanford married, April 11, 1866, Miss Annie M. Cutler, of New Haven, Conn. She died January 18, 1893, leaving three children, Leonard C., Susan M., and Adeline F. Sanford.

JONES, Mary Amanda (Dixon), of New York City, daughter of Noah and Sarah (Turner) Dixon, granddaughter of the Rev. James Dixon, was born February 17, 1828, in Dorchester county, Maryland. In 1845 she was graduated from the Wesleyan Female College, Wilmington, Del., with the first honors of the institution. In 1846 she was elected to the chair of Belles Letters and Physiology, the highest professorship held by women in the college. While in charge of this department she prepared her own text-book on Physiology, and a text-book on the History of Literature. For four years she held the position in the Wesleyan Female College, when she was elected to a similar position in the Baltimore Female College, which chair she resigned at the end of two years to accept the principalship of a young ladies' seminary in the southern part of Maryland. In 1845, when seventeen years of age, she commenced the study of medicine. While in Wilmington she had the kind assistance of Dr. Henry F. Askew, an honored physician of that city; in Baltimore she had the guidance and

assistance of Dr. Thomas E. Bond, Jr., an eminent physician and surgeon of the city of Baltimore. Dr. Jones first attended medical lectures at the Hygeio-Therapeutic College of New York, and was graduated therefrom in 1862, with the highest scholarship of the class. In 1872 she entered the Woman's Medical College of Pennsylvania, attended three winter courses of lectures and three spring courses, and in 1875 received a second time the degree of M. D., and, as reported by the dean, Prof. R. L. Bodley, passed her examinations with the highest record known in the twenty-five years' history of the college. Dr. Jones attended the New York Post-Graduate Medical School and Hospital, when Prof. B. F. Dawson had charge of the Gynecological Department. Prof. Dawson was at that time one of the consulting surgeons to the Woman's Hospital of Brooklyn, to which

Mary A. (Dixon) Jones.

Dr. Jones was gynecologist. In 1886 she studied in Europe, visited the principal hospitals, and while there was privileged to witness the operations of many of the most distinguished surgeons, as Granville Bantock, Lawson Tait, Schroeder, Martin, Billoth, Winkel, Leopold, Péan and many others. She began to practice medicine and surgery in Brooklyn in 1864, giving her chief attention to gynecology. She was gynecologist to the Woman's Hospital of Brooklyn from 1882 to 1891. In surgical work she has performed ovariectomy, supra-pubic hysterectomy, colpo-hysterectomy, splenectomy, trachelorrhaphy, perineorrhaphy, amputation of the breast, and many other major operations. Dr. Jones was the first person in this country to propose and to perform total hysterectomy for myoma of the uterus. On the 23d of November, 1887, she presented before the New York Pathological Society, of which she is a member, a fibroid tumor of the uterus, weighing nine pounds, which she had removed, and had treated the pedicle extra-peritoneally. The patient did well, yet Dr. Jones stated to

the Pathological Society that "she believed a better and more natural procedure would have been, after opening the abdominal walls, being assured of the condition of affairs, and liberating any adhesions that might exist, then to have severed the vaginal connections and to have removed the entire uterus. Or, if the body of the tumor or uterus was removed through the abdominal incision, then to remove the uterine stump *per vaginam*, and after 'la toilette du peritone,' close the abdominal walls and leave the vaginal opening as the best and most natural way of drainage." She gave as the reasons that this mode of procedure would, first, "shorten the operation;" second, "would be less shock to the patient;" third, "would lessen the danger," and fourth, "the patient would make a more rapid recovery." The 16th of the following February (1888) Dr. Jones put this method in practice, removing a uterine myoma weighing seventeen pounds. In twelve or fifteen days the patient was able to be up, and was practically well. (*New York Medical Journal*, August 25, 1888.) This was then supposed to be the first time total hysterectomy was ever performed for myoma, and so far as we now know, the first time it was performed in this country. It is now the accepted operation. (See report of the meeting at the Academy of Medicine, and the address of Dr. E. W. Cushing, of Boston, March 28, 1895.) Dr. Jones also proposed a procedure for vaginal hysterectomy, by which the operation is very much shortened. By this method in 1887 she removed a cancerous uterus, *per vaginam*, in fifteen minutes, and as yet the patient has had no return of the disease. (*American Journal of Obstetrics*, May, 1893.) Her literary work includes papers on "A Case of Tait's Operation," November, 1884; "Removal of the Uterine Appendages," February, 1888; "Kolpo Hysterectomy, with a Report of My First Five Cases Performed in 1887. Some Considerations in Regard to the Operation and Technique," May, 1893; "Microscopical Anatomy of Normal Fallopian Tubes," June, 1894, *American Journal of Obstetrics*; "Removal of the Uterine Appendages, Recovery," April 11, 1885; "Removal of the Uterine Appendages, Nine Consecutive Cases," August 21, 1886; "Ovariectomy and Disease of the Fallopian Tubes," August 28, 1886; "Suppurating Endothelioma. Myo-Fibroma in a Condition of Necrobiosis. Remarks on the Treatment of the Pedicle," September 6, 1890; "Sterility in Women. Causes, Treatment and Illustrative Cases," September 19, 1891; "Carcinoma on the Floor of the Pelvis," March 11, 1893; "Microscopical Studies in Pelvic Peritonitis," May 28, 1892; "Criminal Abortion," July 7, 1894, *Medical Record*; "Two Cases of Removal of Uterine Myoma, One Supra-Pubic Hysterectomy, the Other Complete Hysterectomy," August 25, and September 1, 1888; "A Hitherto

Undescribed Disease of the Ovary, Endothelioma Changing to Angeioma and Hematoma," September 28, 1888; "Another Undescribed Disease of the Ovaries. Anomalous Menstrual Bodies," May 10 and 17, 1890, *New York Medical Journal*; "Misplacements of the Uterus. History Cases, Showing in Many Instances How They Are Produced. The Accompanying Conditions, Microscopical Examinations," *Pittsburg Medical Review*, October, 1889; "Changes in the Ovary as a Result of Menstruation and Gravidity," April 30, 1892; "A Talk on Subjects Relating to Parturition," August 6, 1892; "Retroversion in Pregnancy," August 6, 1892, *The Times and Register*; "Shall Mothers Nurse Their Babies?" August 20, 1892; "Review of Recent Gynecological Literature," August 20, 1892, *Medical Digest*; "Diagnosis and Some of the Clinical Aspects of Gyroma and Endothelioma of the Ovary," *Buffalo Medical Journal*, November, 1892; "Oöphorectomy in Diseases of the Nervous System," *The Medical and Surgical Reporter*, May 27, 1893. In preparation: "Laparotomy From 1879 to 1889," "Diseased Ova," "Another Hitherto Undescribed Disease of the Ovary," "Tubal Disease," "Oöphoritis" and a work on "The Microscopical Anatomy of Woman's Genital Organization." Dr. Jones was for several years one of the associate editors of *The Times and Register*, Philadelphia, and has been since 1893 one of the associate editors of the *Woman's Medical Journal*, Toledo, Ohio. During the last twenty years Dr. Jones has, with all her active practice, devoted a great deal of time to microscopical studies in normal and diseased tissue. From 1872 to 1875 she studied microscopy under Dr. J. Gibbons Hunt, of Philadelphia. Since 1876 she has pursued her investigations in Dr. Charles Heitzman's laboratory. She has in her microscopical researches, with Dr. Heitzman's assistance, discovered two diseases, *Endothelioma* and *Gyroma*, which diseases are proved to be of rather frequent occurrence. She has also described the symptoms by which they may be clearly diagnosed. Her writings have been largely quoted by some of the authors of standard medical books as Pozzi in Paris, Kelly in Baltimore, and especially in the last edition of a late work on Diseases of Women, published in London. The President of the British Gynecological Society, in his opening address at a recent session of that organization, has referred to her work in very complimentary terms (see *British Gynecological Journal*, May, 1898, p. 15), and her discoveries in Pathology have been recognized by scientists in Europe.

Married, in 1854, Mr. John Q. A. Jones, an attorney at law. They have three children, all of whom are prominent in professional and social life.

## NECROLOGY.

This table comprises an alphabetical list of eminent physicians, surgeons and specialists who have died since the first edition of this work was published, and gives the place, date and cause of death, as far as known to the editor. It also indicates the page of this book upon which their life sketch may be found.

<p>ALLEN, Ezra Pascal, of Athens, Pa., a noted physician, surgeon and contributor to medical literature and science, died at his home May 21, 1895, aged 74 years . . . . . 9</p> <p>ALLEN, Harrison, of Philadelphia, Pa., formerly Professor of Comparative Anatomy and Zoölogy in the University of Pennsylvania, died at his residence November 14, 1897, aged 56 years . . . . . 9</p> <p>BATTEY, Robert, of Rome, Ga., an eminent gynecologist, died at his residence November 8, 1895, aged 67 years . . . . . 32</p> <p>BRIGGS, William T., of Nashville, Tenn., a distinguished surgeon of the South, died at his home June 13, 1894, aged 66 years . . 61</p> <p>BROWN, Bedford, of Alexandria, Va., a noted surgeon and gynecologist, died at his home September 13, 1897 . . . . . 592</p> <p>CHANCELLOR, James Edgar, of Chancellorsville, Va., formerly a distinguished surgeon in the Confederate army, died at his residence September 11, 1896, aged 70 years . . . . . 81</p> <p>CHARLTON, Samuel H., of Seymour, Ind., one of the best known physicians of his State, died at his residence January 12, 1897, aged 70 years . . . . . 83</p> <p>COMEGYS, Cornelius George, of Cincinnati, Ohio, a famous clinician and writer, died at his home of la grippe, complicated with nephritis, February 10, 1896, aged 80 years . . . . . 95</p> <p>CORSON, Hiram, of Plymouth Meeting, Pa., a famous physician of his State and oldest member of the A. M. A., died at his home March 4, 1896, aged 92 years . . . . . 99</p> <p>DUNLAP, Alexander, of Springfield, Ohio, a noted gynecologist, who had performed laparotomy 400 times, died at his residence February 17, 1894, aged 79 years . . . . . 143</p> <p>DYAS, William, of Chicago, Ill., one of the oldest and best known physicians of general practice in that city, was killed by railroad accident February 17, 1895, aged 88 years . . . . . 609</p> <p>ELDER, E. S., of Indianapolis, Ind., formerly Professor of Principles and Practice of Medicine in the Indiana Medical College, died at his home of peritonitis May 19, 1894, aged 53 years . . . . . 156</p> <p>FORD, Corydon L., of Ann Arbor, Mich., a noted anatomist and physiologist, died of apoplexy at his home April 14, 1894, aged 80 years . . . . . 167</p>	<p>GOODELL, William, of Philadelphia, Pa., a famous gynecologist and clinician, died at his home October 27, 1894, aged 65 years . . . . . 186</p> <p>GOODMAN, Col. H. Ernest, of Philadelphia, Pa., formerly physician to the port of that city, surgeon in United States army and Emeritus Professor of Surgery in the Medico-Chirurgical College, died from an attack of heart disease while on a train visiting a patient January 3, 1896, aged 60 years . . . . . 186</p> <p>HAMILTON, John B., of Chicago, Ill., ex-Surgeon-General U. S. Marine Hospital Service, editor of the Journal of the American Medical Association and superintendent of the Illinois Hospital for Insane, at Elgin, that State, died there of peritonitis December 4, 1898, aged 51 years . . . . . 196</p> <p>HARTSHORNE, Henry, of Philadelphia, Pa., a distinguished physician and author, died at Tokio, Japan, February 10, 1897, aged 73 years . . . . . 202</p> <p>JONES, Joseph, of New Orleans, La., who was probably the most noted physician and sanitarian of the South, and member of the faculty of Tulane University, died at his home February 17, 1896, aged 63 years . . . . . 254</p> <p>KEATING, William N., of Philadelphia, Pa., a noted physician and author, died at his home April 18, 1894, aged 71 years . . . 264</p> <p>KEYSER, Peter Direk, of Philadelphia, Pa., Professor of Ophthalmology in the Medico-Chirurgical College, died from an attack of pneumonia at his home March 9, 1897, aged 62 years . . . . . 266</p> <p>LACKERSTEIN, Mark H., of Chicago, Ill., formerly surgeon in the English army, who rendered valuable services in the East Indies, and a well-known physician and neurologist of Chicago, died in that city December 7, 1897, aged 62 years . . . . . 271</p> <p>LARABEE, John Albert, of Louisville, Ky., Professor of Obstetrics and Diseases of Children in the Hospital College of Medicine, died of heart disease at his home June 12, 1898, aged 58 years . . . . . 274</p> <p>LINDSEY, John Berrien, of Nashville, Tenn., formerly secretary Tennessee State Board of Health, died at his home December 11, 1897, aged 75 years . . . . . 651</p>
---	--

- LOGAN, Samuel, of New Orleans, La., Professor of Surgery in Tulane University, died at his home January 13, 1893, aged 62 years.....652
- LOVE, W. Abram, of Atlanta, Ga., a distinguished gynecologist and neurologist, also president of Atlanta Medical College, died at his home January 21, 1898, aged 74 years.....654
- LUSK, William Thompson, of New York City, Professor of Obstetrics and Clinical Midwifery in Bellevue Hospital Medical College, died at his residence from cerebral apoplexy June 12, 1897, aged 59 years. 289
- MILES, Albert B., of New Orleans, La., Professor of Materia Medica and Therapeutics in Tulane University, also house surgeon of Charity Hospital, died at his residence August 5, 1894.....659
- O'DWYER, Joseph, of New York City, Professor of Diseases of Children in the New York Post-Graduate Medical School and Hospital, died at his home from tubercular meningitis January 7, 1898, aged 55 years.....663
- OWEN, Abraham M., of Evansville, Ind., one of the most noted surgeons of Southern Indiana, died suddenly at his home from an attack of angina pectoris September 18, 1898, aged 49 years.....360
- PARVIN, Theophilus, of Philadelphia, Pa., ex-president A. M. A., and Professor of Obstetrics and Diseases of Women and Children in Jefferson Medical College, died at his home January 29, 1898, aged 79 years.....375
- PATTEE, Asa F., of Boston, Mass., a distinguished physician, medical teacher and writer, died at his residence June 1, 1897, aged 62 years.....376
- PEPPER, William, of Philadelphia, Pa., a noted physician, educator and for several years Provost of the University of Pennsylvania, died of heart disease at Pleasanton, Cal., July 28, 1898, aged 55 years....380
- QUINBY, Isaac Newton, of Jersey City, N. J., one of the most accomplished physicians of his State, and member of the judicial council of the A. M. A., died at his home May 6, 1898, aged 67 years....667
- ROBERTS, Milton Josiah, of New York City, an eminent surgeon, editor and teacher, died at his residence June 26, 1893.....671
- SMITH, J. Lewis, of New York City, author of a "Treatise on Diseases of Children," died at his home June 9, 1897, aged 60 years.....474
- THOMPSON, William Clinton, of Indianapolis, Ind., where he had practiced his profession fifty years, died at his home April 19, 1897, aged 85 years.....688
- WINTERMUTE, James Stinson, of Tacoma, Wash., first vice-president of his State Medical Society, and a young physician of great prominence, was shot and killed by an insane patient November 10, 1896.....702
- WOODBURN, Frederick C., of Indianapolis, Ind., formerly secretary of the Indiana State Medical Society, and of the Mississippi Valley Medical Association, and recently connected with the Medical Department of the United States Army, died from typhoid fever at Ponce, Porto Rico, September 28, 1898, aged 32 years..704

## CORRECTIONS AND ADDITIONS.

ANNIS, E. L.

p. 729

Add: In 1896 Dr. Annis purchased and is successfully managing the Annis Hospital, located at 205 Rumely street, La Porte, Ind., which is devoted to obstetrical and gynecological cases exclusively.

ASHMEAD, A. S.

p. 709

The third name in first and second line should be "Sydney" instead of "Sidney." After the words "Thomas Ashmead's brother," in the eighth line from top, read: "John Ashmead was the grandfather of the London Ashmeads, Bartletts, Sir Ellis, who was knighted by the Queen, and William, who married the Baroness Burdett-Coutts." In the fourteenth line read: "Philip Theodore." After the words "William Penn's secretary, in the sixteenth line from top, read: "His monument is in the State grounds, Harrisburg, Pa. He was the originator of the Union Canal, Schuylkill Canal Navigation and other State improvements." After the words "of Revolutionary fame," in seventeenth line, read: "Surgeon of Yellow Springs Hospital near Valley Forge." The twenty-eighth line from top should read: "John Ashmead, the ancestor of Doctor Ashmead." After the words "Benjamin Rush," in thirty-third line, read: "his cousin." After the words "Sarah Lasher, thirty-seventh line, read: "Sister of Jacob Lasher, Stephen Girard's secretary. Although of Jewish descent, all her children and grandchildren were raised Presbyterians." After the word "conference," thirteenth line from the bottom, read: "and author of the 'Proposition in International Measures for the Suppression and Prevention of Leprosy.'" In the eleventh and tenth line from bottom read: "Three daughters, Jean, Anna and Sarah."

BANKER, A. J.

p. 787

In sixth line from top for the words "of Irish descent," read "of Scotch-Irish descent."

BINGHAM, JOHN G.

p. 767

In the ninth line from bottom of sketch, add: American Medical Association, and in the

fourth line from bottom add: President of Board of U. S. Examining Surgeons as reorganized.

BRECHIN, W. P.

p. 750

After the words "of New York" in twenty-ninth line from top read "as medical expert." For "in May" in ninth line from bottom, read "of Mt. Olivet Chapter of Rose Croix, A. A. Scottish Rite held."

BRUNDAGE, A. H.

p. 791

Add: Dr. Brundage graduated from the Brooklyn College of Pharmacy, receiving the degree of Ph. G. He also took a post-graduate course at the same institution, receiving the degree of Pharm. D. In recognition of his literary and other work the University of Nashville conferred the honorary degree of A. M. upon him. Dr. Brundage is Professor of Toxicology, Physiology and Hygiene in the Brooklyn College of Pharmacy; is a member of the Board of Pharmacy of the city of New York, and examiner in Toxicology and Posology on that board; is vice-president of the New York State Pharmaceutical Association; physician to the Bushwick Hospital; president of the Brooklyn Medical Society in 1895 and 1896; president of the Metropolitan Training School for Nurses, 1895 and 1896, and lecturer on Practice of Medicine in the same. Dr. Brundage was selected by the mayor of Brooklyn to act as one of the commissioners to the Tennessee Centennial Exposition in 1897. He was also the author of the amendment to the Pharmacy Chapter of the Greater New York Charter. He is a member of the American Medical Association and the Connecticut Pharmaceutical Association. Among his more recent contributions to the literature of his profession should be mentioned—those entitled "Why Pharmacutists Fail," "The Druggist and the Department Store," "The Physician and the Pharmacist," "The Office and Influence of the Pharmaceutical Journals," "A Uniform Standard for Pharmaceutical Preparations," "The Stability of Morphine Sulphate in Pills and Tablets," and "The Danger of Self-Medication." Some of

- his writings have been widely copied and also translated into German. His youngest child, an infant, Cecil Webster, born November 8, 1894, died April 4, 1896.
- CARTER, J. M. G. p. 766  
Add: He is a member of The Chicago Society of Internal Medicine and a Fellow of The American Historical Association. His Chicago office is 100 State street.
- CASEBEER, J. B. p. 795  
For "1883" in one hundred and first line from bottom read "1863." In forty-sixth line from bottom for "Kusler" read "Kessler." In thirty-fifth line from bottom for "J. G. Matheny," "T. G. Matheny."
- COMEGYS, C. G. p. 95  
For "1846" in third line from top of sketch read "1816."
- COOK, B. H. p. 738  
After name and address read "son of Matt. F. and Sarah (Prickett) Cook." For "dress" in thirty-first line from top read "dressings." Add, author of the following papers: "Treatment of the New Born"; "Fractures of Forearm and Treatment"; "Is Carcinoma Transmissible? If so, Under What Conditions?" "Lacerated Perineum, Its Restoration and Treatment"; "La Grippe, Its Treatment and Sequelae"; "Treatment of 'Fractured Clavicle'"; "Treatment of 'Fractured Patella'"; "Should the Physician Treat the Poor Without Remuneration? If so, Why?" and others.
- COURTNEY, T. E. p. 785  
For "Courtenay" in tenth line from bottom read "Courtney."
- CURRIER, D. M. p. 745  
For "fifteen," in seventh line from top, read "eighteen."
- DANDRIDGE, N. P. p. 790  
The thirty-second, thirty-third, thirty-fourth and thirty-fifth lines from top of sketch should read as follows: "And some years later, upon the resignation of Dr. Kearney, succeeded him as professor of surgery. He has held the position of registrar to the college." For "surgeons," in eighth line from bottom, read "surgical."
- DUFFIELD, A. M. p. 772  
For "Mutual" in fifty-second line from top of sketch read "Medical"; For "third" in fifty-fifth line read "fourth"; for "two" in fifty-eighth line read "three"; for "honorable" in fifty-eighth line "Honorary." Add,
- after the date December 31, 1896, in third line from bottom, the following: On June 2, 1898, twin daughters were born to them on Monte Sano, the summer resort of Huntsville, Alabama.
- DURHAM, CHAS. O. p. 803  
Add: He is at present a member of the City Board of Health and Charities and also Consultant in Surgery to the City Hospital and City Dispensary.
- EVERTS, ORPHEUS. p. 716  
The twentieth line from bottom of sketch should read, "Member (not president) of the Mississippi Valley Medical Society." In the seventh line from the bottom add: "The Cliffords or Almost Persuaded," 1898. The word "deceased," on the fourth line from bottom of sketch, should be omitted and should read, "Dr. Charles C. Everts, of Indianapolis, Ind., is their only living son."
- EWING, CALVIN K. p. 770  
For "the Order of United Toilers," in last line of sketch, read: "the Toilers of the World."
- FENNO, H. M. p. 747  
For "Elizabeth (Sanborn) Fenno," in second and third line from top, read: "Mrs. E. S. Fenno, M. D." Add: Dr. Fenno has recently reported to the medical journals a case of removal of a lipoma from the left labium majus of a mulatto girl. Kelly of the Johns Hopkins University says that no writer has as yet recorded more than a single case in his own practice. Since Dr. Fenno's biographical sketch was written he married Mrs. Katherine S. Hoffman, daughter of the late Dr. Leonard Barber of Walcottville, Indiana.
- GAMBER, W. P. p. 761  
Add: Four operations have been performed for removing cancer of the breast. Held the position of secretary of the Board of U. S. Examining Surgeons for pensions during the administration of president Cleveland, but does not now. Dr. Gamber's infant son William George died when about seven months of age. A second child, a son, Merle P. Gamber, was born November 30, 1897.
- GOTTLIEB, J. ADELPHI. p. 780  
Add: In 1898 he received many honors, foremost of which were the honorary degrees of LL. D. and D. C. L.; and he is equally prominent in the fraternal world, being a 32° A. A. S. R. Mason, his genial character making him an all around favorite with everyone, always having a kind word and a ray of sun-

- shine for the needy; he is only then happy when he can further the objects of his fellow-men.
- HODGES, FRED J. p. 806  
For "in" read "at" in eighth line from top of sketch. For "Cook county," in thirteenth line from top, read "Cook County Hospital." For "16" in tenth line from bottom read "24," and for Fred in sixth line from bottom read "Frederick."
- HOLMES, C. R. p. 815  
For the words "since which time," in sixth and seventh lines from top, read: "since 1888," After the word "institution," in eighth line, read: "He has made a number of trips abroad, studying in Berlin and other medical centers of Europe."
- JACKSON, WM. R. p. 770  
Add: Dr. Jackson attended special courses in gynecology at the New York Polyclinic in 1895 and a course in general surgery at the New York Post-Graduate School during the same year, and has contributed several papers to medical periodicals in addition to those mentioned in his biographical sketch.
- JONES, HERBERT C. p. 756  
For "eight," in eighth line from bottom, read "nine," and for "seventeen" and "thirteen," in second and third line from the bottom, read "eighteen" and "fourteen," respectively.
- LINDLEY, WALTER. p. 751  
Add: During 1879 and 1880 he was health officer of the city of Los Angeles, and during 1880 and 1881 he was member of the City Board of Education. He was superintendent of the Los Angeles County Hospital during 1886 and 1887. In 1897 he organized twenty of the leading medical men of Los Angeles into the California Hospital Association, and this corporation immediately erected the California Hospital, a beautiful building of seventy-three rooms located at 1414 South Hope street, Los Angeles. This private hospital was opened June 11, 1898, and has proved to be a very successful enterprise. Although an active Republican, he was in 1897 appointed by the Democratic governor of California one of the trustees of Whittier State School, which position he still holds.
- LINE, B. A. p. 725  
For "sporadicaly," in twenty-third line from bottom, read "sporadically." For "with," in seventh line from bottom, read "of."
- LONG, HARRY. p. 776  
For "Dr. H. Snizer" in thirteenth line, read "Smizer."
- LOWE, GEO. N. p. 711  
In thirty-sixth line from top, "the past four years" should read "the past eight years."
- MCSHANE, J. T. p. 310  
In eighth line from top of second column, for "Earnest" read "Ernest," and for "post physycian," in twelfth line from top of same column, read "port physician."
- MARBLE, JOHN O. p. 748  
After the words "literary pursuits," thirteenth line from bottom of sketch, read: "to congenial studies and to travel."
- MITCHELL, W. F. p. 752  
For "farn," in fifth line from top, read "farm." For "is," in thirty-fifth line from top, read "was," and for "E. Lillian," in third line from bottom, read "Elillian."
- NANCREDE, C. B. p. 762  
In fifty-fifth line from bottom, for "excision" read "excision." In twenty-seventh line from bottom, for "hemorrhoid" read "hemorrhoids." In twenty-second line from bottom, for "Barnett" read "Burnett." To this sketch add the following: Dr. Nancrede is a member of the American Academy of Medicine and received the degree of LL. D. from the Jefferson College in 1898. As one of the chief surgeons of the Spanish-American War he served in the Santiago campaign in Cuba, and at Camps Alger, Eaton and Wikoff.
- NORTH, N. L. p. 746  
For "*Daily Journal*," in seventeenth line from bottom, read "*Daily Journals*." After the word "Philo," in sixth line from bottom, read "and Sarah." For "Albrota," in fourth line from bottom, read "Abrota," and after "Willard," in last line, read "Parker."
- POPE, CURRAN. p. 816  
Wherever the word "sanitarium" occurs in his (or any other) biographical sketch read "sanatorium." In the fourteenth line from bottom of Dr. Pope's sketch, for "consultant" read "consulting."
- QUINN, A. T. p. 765  
For "since," in twentieth line from bottom, read "in"; also omit "and" in eighth line from bottom.

- REGENSBURGER, A. E. p. 753  
For "vice-president," in twentieth line from top, read "ex-president."
- ROSS, W. F. p. 713  
In third line from bottom add, and "Hygiene Cook Book." For "1508 North Grand Ave., St. Louis, Mo.," in first and second lines from bottom, read "Champaign, Illinois, where he has removed, and is now president of the National College of Hygiene."
- SAVAGE, G. C. p. 798  
In thirty-third line from bottom for "95" read "98." For "has since," in eighth line from bottom, read "for five years." For "fourth," in sixth line from bottom, read "seventh." In third line from bottom omit "and" before "Portia Atchison"; after this name read "and Kate Eastman." Add: Dr. Savage was president of the Medical Society of the State of Tennessee in 1896, and in 1898 he invented a photometer based on the principle of non-disturbance of one eye while the other is under test.
- SCHEPPEGRELL, F. W. p. 758  
Add: Dr. Scheppegrell is vice-president of the Western Ophthalmologic and Oto-Laryngologic Association, and is also vice-president of the Orleans Parish Medical Society.
- SCOTT, J. J. p. 807  
For "Jane," at the end of the fifth line from top, read "Joyce." For "Sunnard," in fourth line from bottom, read "Tunnard." Add: Dr. Scott is also a member of the National Sanitary Association.
- SLACK, H. R. p. 747  
For "ten," in thirty-ninth line from bottom, read "twelve." For the last two lines, read: "They have four children, Henry R., Searcy B., Ruth and Mary Louisa Slack. Add: In the spring of 1898, Dr. Slack spent some time at Battle Creek Sanitarium studying diseases of the stomach. He then visited the hospitals of Chicago and took a course in diseases of the eye, ear, nose and throat at the Post-Graduate Medical School and Hospital.
- SOUCHON, E. p. 816  
For "Edmund," in first and tenth lines, read "Edmond." Add: after "of the Society of American Anatomists," in thirteenth line from bottom. "Fellow of the American Surgical Association."
- STANDLEE, E. L. p. 760  
For "April 29, 1892," in ninth line from bottom, read "April 20, 1892."
- VIALLO, L. H. p. 733  
For "1890," in twenty-sixth line from bottom, read "1870." For "Dr. Viallon," in twelfth line from bottom, read "Mr. Viallon." For "Fleurance," in fortieth line from bottom, read "Fleurance." This sketch should read: Mr. Viallon, not Dr. Viallon, is a member of the Knights of Pythias, Knights of Honor and American Legions of Honor. Dr. Viallon is a member of the Alumni Association of Tulane University of Louisiana, not his father Mr. Viallon.
- WAITE, H. N. p. 713  
Add: In 1895 Dr. Waite was elected a member of the American Medical and Surgical Society of Ohio, elected member of the New York State Academy of Veterinary Science and Comparative Pathology, in November, 1896, and was elected member of the United States Medical Practitioners' Protective Alliance in 1896, and honorary member of the Union Medical Association of Massachusetts; also honorary member of the Connecticut Eclectic Medical Association in the same year. In June, 1895, he received the Honorary Degree of Doctor of Medicine from the American Eclectic Medical College of Cincinnati, Ohio. In November, 1897, he was elected a member of the Vermont Society Sons of the American Revolution. In May, 1898, he was elected a member of the Maine Eclectic Medical Society, in October, 1898, elected a member of the Vermont Historical Society. He is examining surgeon for the town of Johnson for the Phoenix Mutual Life Insurance Company, Hartford, Conn., the Mutual Reserve Fund Life Association, New York City, N. Y.; and the Masonic Equitable Accident Association, Boston, Mass. Dr. Waite is of the opinion that no one school or system of medicine contains all the truth. A knowledge of all of the various systems in vogue will add much to the edification of the profession, and from the various systems a more perfect and scientific practice of medicine and surgery may thus be perfected, a higher standard of medical education advanced, and a more thorough and higher eclecticism in the realms of medical science thus attained. Only by being always learners, always open to light from whatever crevice it may come, may we be able to expand, to grow, and to meet the demands of our profession to the fullest extent, neither medical ethics nor the creeds of the churches must be suffered to hedge us in. If they do, their bonds must burst and the shells must go, as the husks and coverings before the swelling and developing and ripening kernels of natural growth in this world of ours.

WEINSTEIN, LEO J. p. 714  
 For "Eliza," in fifth line, read "Thirza,"  
 and add: The son is also a physician, a gradu-  
 ate of the Miami Medical College, Cincinnati,  
 Ohio, and associated in practice with his  
 father. Dr. Leo J. Weinstein is now gyne-  
 cologist to the Terre Haute Sanitarium Hos-  
 pital and medical examiner for the Connecti-  
 cut Mutual, as well as the Mutual Benefit of  
 Newark, N. J., and other life insurance com-  
 panies. He is widely known in Illinois as well  
 as western Indiana.

WISHARD, JOSEPH M. p. 777  
 For "paroled," in eighth line from bottom,  
 read "exchanged."

WILSON, W. V. p. 810  
 Add at the end of seventeenth line from top  
 of sketch the words "in 1887 settled" at

West Haven, Conn. For "Bessie," in third  
 line from bottom, read "Elizabeth Brayton."

WYCKOFF, R. M. p. 750  
 In twenty-second line from top of sketch, add:  
 He served for a few days in January, 1898,  
 under the Department of Health of the  
 Greater New York.

YOUNG, CHARLES E. p. 741  
 For "street," in twenty-fourth line from top,  
 read "Vermont." For the words "a mem-  
 ber," in fourth line from bottom, read "Past-  
 Grand." Add: also a Patriarch of Guiding  
 Star Encampment, No. 83. Dr. Young is the  
 present Regent of White Plains Council, No.  
 762, Royal Arcanum. In recognition of his  
 attainments the Massachusetts Agricultural  
 College conferred upon him the degree of  
 Bachelor of Science at its last commence-  
 ment.

# LOCAL MEDICAL AND SURGICAL INDEX.

The following is an index of the names, business addresses and biographical sketches of a majority of the most eminent physicians, surgeons and specialists, as found in various parts of the United States and Territories. The towns and cities are arranged in alphabetical order, and the population of each is according to the census of 1890.

	PAGE.		PAGE.
<b>ALBANY, N. Y.</b> Population, 94,923.		Cathell D. W., Physician, 1308 N. Charles St.	77
Bailey W. H., Physician, 1 Washington Ave.	21	Chancellor C. W., Phys. and Surg., 12 E. Eager St.	79
Bigelow J. M., Phys. and Surg., 54 Eagle St.	45	Chew Samuel C., Physician, 216 W. Lanvale St.	86
Boyd J. P., Gynecologist, 152 Washington Ave.	57	Chisolm J. J., Oculist and Aurist, 114 W. Franklin St.	86
Curtis F. C., Phys. and Surg., 17 Washington Ave.	104	Cuddy J. W. C., Physician, 506 N. Carrollton Ave.	601
Merrill C. S., Oculist and Aurist, 23 Washington Ave.	323	Lewis W. M., Phys. and Surg., 1209 Presstman St.	651
Tucker W. G., Chemist Albany Medical College.	514	Merrick L. K., Rhin. and Laryng., 843 N. Eutaw St.	659
Vander Veer Albert, Gynecologist, 28 Eagle St.	517	Miltenberger Geo. W., Phys., 319 W. Monument St.	325
Van Rensselaer H., Physician, 94 Columbia St.	692	Monmonier J. F., Physician, 824 N. Calvert St.	334
Ward Samuel B., Phys. and Surg., 135 N. Pearl St.	695	Opie Thos., Obstetrician, 600 N. Howard St.	358
<b>ALEXANDRIA, VA.</b> Population, 14,339.		Osler Wm., Physician, 1 W. Franklin St.	663
Brown Bedford, Phys. and Surg., 202 N. Wash. St.	592	Reufling G., Oculist and Aurist, 103 W. Monument St.	422
<b>ALLEGHENY, PA.</b> Population, 105,287.		Stokes Wm. H., Physician, 619 St. Paul St.	686
Rankin David N., Phys. and Surg., 85 Lincoln Ave.	417	Street David, Physician, 403 N. Exeter St.	686
<b>ALMA, MICH.</b> Population, 2,400.		Taneyhill G. L., Phys. and Surg., 1103 Madison Ave.	687
Brainerd I. N., Phys. and Surg., 86 Superior St.	57	Tiffany Louis McLane, Surgeon, 831 Park Ave.	690
<b>ALTON, TENN.</b> Population, 25.		Welch Wm. H., Phys. and Path., Johns Hopkins Hos.	540
Abernethy Jesse T., Physician.	1	<b>BANGOR, ME.</b> Population, 19,103.	
<b>AMES, IOWA.</b> Population, 1,500.		Hamlin Augustus C., Physician and Surgeon.	632
Fairchild David S., Physician and Surgeon.	161	Sanger Eugene F., Physician and Surgeon.	672
<b>ANN ARBOR, MICH.</b> Population, 9,431.		<b>BARRON, WIS.</b> Population, 829.	
Dock George, Physician, 22 E. Jefferson St.	605	Ellis William H., Physician and Surgeon.	616
Ford Corydon L., Physician and Surgeon.	167	<b>BATON ROUGE, LA.</b> Population, 13,000.	
Gibbes Heneage, Pathologist, 16 Forest Ave.	621	Dupree Jas. W., Phys. and Surg., 409 Laurel St.	145
<b>ANNISTON, ALA.</b> Population, 10,000.		<b>BAY CITY, MICH.</b> Population, 27,839.	
Hill Thos. C., Phys. and Surg., 187 E. 18th St.	217	Erwin Robert W., Physician, 620 N. Monroe St.	158
<b>ASTORIA, ORE.</b> Population, 6,184.		<b>BELLOWS FALLS, VT.</b> Pop., 5,000.	
Kinney Augustus C., Physician.	268	Campbell E. R., Physician and Surgeon, 21 Henry St.	596
<b>ATHENS, PA.</b> Population, 3,274.		<b>BERKELEY, CAL.</b> Population, 1,700.	
Allen Ezra P., Surgeon.	9	LeConte Joseph, Scientist, 27 Bancroft Way.	276
<b>ATLANTA, GA.</b> Population, 65,533.		<b>BINGHAMTON, N. Y.</b> Pop., 35,005.	
Armstrong W. S., Phys. and Surg., 154 Washington St.	14	Orton J. G., Physician, 215 Main St.	359
Goldsmith W. T., Surgeon, 8 S. Broad St.	627	<b>BIRMINGHAM, ALA.</b> Pop., 26,241.	
Knott Jas. J., Surgeon, 3½ Whitehall St.	649	Davis W. E. B., Gynecologist, 1806 Third Ave.	113
Love Wm. A., Gynecologist, 237 Whitehall St.	654	<b>BISMARCK, N. D.</b> Population, 2,186.	
Powell, Thos. S., Obstetrician, 63 S. Pryor St.	667	Porter Henry R., Physician and Surgeon.	667
<b>AUGUSTA, GA.</b> Population, 33,300.		<b>BLOOMINGTON, ILL.</b> Pop., 22,242.	
Foster Eugene, Physician, 612 Broad St.	168	Guthrie Wm. E., Physician and Surgeon.	193
<b>AUSTIN, TEX.</b> Population, 14,575.		Vander Vort, F. C., Physician.	518
Daniel F. E., Dermatologist, 105 W. Seventh St.	105	<b>BORDENTOWN, N. J.</b> Pop., 4,232.	
Taylor Matthew A., Phys. and Surg., 104 W. 8th St.	502	Young Irene D., Oculist and Aurist.	574
White Frank S., Alienist and Neurologist.	542	<b>BOSCOBEL, WIS.</b> Population, 1,570.	
Wooten Thos. D., Surgeon, 107 E. Tenth St.	570	Armstrong Leroy G., Physician and Surgeon.	14
<b>BAKER CITY, ORE.</b> Population, 2,604.		<b>BOSTON, MASS.</b> Population, 448,477.	
Fuller H. J., Gynecologist.	177	Amory Robert, Physician, 279 Beacon St.	12
<b>BALTIMORE, MD.</b> Population, 434,439.		Chenery Elisha, Physician, 65 Chandler St.	85
Arnold Abraham B., Physician, 2016 Madison Ave.	14	Chenery F. E., Oculist, Hotel Bristol.	597
Atkinson A., Phys. and Surg., 2101 Maryland Ave.	15	Cushing Ernest W., Gynecologist, 163 Newbury St.	105
Caldwell, John J., Neurologist, Waverly.	72	Durgin Samuel H., Phys. and Surg., 12 Beacon St.	146
		Dwight Thomas, Physician, 235 Beacon St.	146

- Edes Robert T., Neurologist Adams Nervine Asylum. 156  
 Folsom Chas. F., Phys. and Surg., 15 Marlboro St. 619  
 Greenough F. B., Phys. and Surg., 10 Charles St. 630  
 Holmes Oliver W., Physician, 296 Beacon St. 219  
 Ingalls Wm., Physician and Surgeon, 780 Beacon St. 240  
 Jeffries B. J., Oculist, 3 Exeter St. 250  
 Johnson J. W., Gynecologist, 20 Worcester St. 645  
 Knapp Philip C., Neurologist, 33 Marlboro St. 648  
 Knight F. I., Laryngologist, 377 Boylston St. 269  
 Marcy Henry O., Surgeon, 180 Commonwealth Ave. 314  
 Miller Albert E., Physician, 110 Tremont St. 659  
 Minot Francis, Physician, 65 Marlboro St. 659  
 Mixer Samuel J., Surgeon, 180 Marlboro St. 659  
 Nichols Arthur H., Physician, 55 Mt. Vernon St. 355  
 Pattee A. F., Physician, 94 W. Springfield St. 376  
 Shattuck F. C., Physician, 135 Marlboro St. 462  
 Spear Edmund D., Oculist and Aurist, 6 Beacon St. 631  
 Standish Myles, Oculist, 200 Dartmouth St. 478  
 Tenney J. A., Ocul. and Aur., 2 Commonwealth Ave. 688  
 Wells Frank, Physician, 178 Devonshire St. 700
- BRATTLEBORO, VT.** Pop., 6,862.  
 Holton Henry D., Physician and Surgeon. 220
- BROOKLYN, IOWA.** Population, 1,400.  
 McCulloch A. P., Physician and Surgeon. 655
- BROOKLYN, N. Y.** Population, 853,945.  
 Bell Agrippa N., Physician, 291 Union St. 40  
 Burge J. H., Hobart, Phys. and Surg., 132 Montague St. 63  
 Fowler Geo. R., Surgeon, 302 Washington Ave. 620  
 Raymond J. H., Physician, 173 Joralemon St. 669  
 Skene, Alex. J. C., Gynecologist, 167 Clinton St. 469
- BUFFALO, N. Y.** Population, 255,664.  
 Abbott F. W., Oculist and Aurist, 223 Franklin St. 575  
 Fell Geo. E., Physician, 72 Niagara St. 618  
 Flagg J. D., Phys. and Surg., 135 E. Eagle St. 619  
 Grant H. G., Oculist and Aurist, 50 W. Tupper St. 629  
 Harrington D. W., Genito-Urinary Surg., 1430 Main St. 200  
 Mann M. D., Obst. and Gynecologist, 37 Allen St. 657  
 Park Roswell, Surgeon, 510 Delaware Ave. 369  
 Potter Wm. W., Gynecologist, 284 Franklin St. 411  
 Rochester De Lancey, Physician, 469 Franklin St. 672

## SUPPLEMENTAL LOCAL MEDICAL AND SURGICAL INDEX.

The following is an index of the names, business addresses and biographical sketches of eminent physicians, surgeons and specialists as found in various parts of the United States and Territories not included in the first edition of this work. The towns and cities are arranged in alphabetical order, and the population of the leading cities is that estimated by municipal authorities on January 1, 1898, while the population of smaller cities and towns is according to the census of 1890.

<b>AIKEN, S. C.</b> Population, 2,362.	
Croft Theodore G., Physician and Surgeon.	813
<b>ALBION, MICH.</b> Population, 4,845.	
Thomason H. D., Physician and Surgeon.	808
<b>ALEXANDRIA, IND.</b> Population, 4,000.	
Line B. A., Physician.	725
<b>ANDERSON, IND.</b> Population, 18,000.	
Davis J. W., Physician and Surgeon.	799
<b>ANN ARBOR, MICH.</b> Population, 11,071.	
Nancrede Chas. B., General Surgeon.	762
<b>ASHLAND, WIS</b> Population, 12,311.	
Hodges Frederick J., Surgeon Rinehart Hospital.	806
<b>ATHENS, GA.</b> Population, 9,000.	
Goss I. H., Surg. and Gynecol., 129 Hancock Ave.	743
<b>AUGUSTA, GA.</b> Population, 33,500.	
Coleman Thos. D., Physician, 563 Greene St.	738
<b>AUGUSTA, MAINE.</b> Population, 10,527.	
Hill H. B., Alienist and Neurologist.	769
<b>BALTIMORE, MD.</b> Population, 625,270.	
Reid E. M., Phys. and Surg., 604 N. Fremont St.	783
<b>BAYOU GOULA, LA.</b> Population, 769.	
Viallon Louis H., Physician.	733
<b>BETHEL ACADEMY, VA.</b> Population, 55.	
Smith Thomas W., Physician.	814
<b>BLAIRSVILLE, PA.</b> Population, 4,500.	
Klingensmith I. P., Physician and Surgeon.	708
<b>BOSTON, MASS.</b> Population, 550,000.	
Baxter E. K., Physician (deceased).	771
Brechin Wm. P., Physician, 16 Temple St.	750
Crocker Susan E., Physician, 1069 Boylston St.	801
<b>BRISTOL, TENN.</b> Population, 6,226.	
Peavler G. M., Specialty Eye, Ear, Nose and Throat.	744
<b>BROOKLYN, N. Y.</b> Population, 995,276.	
Brundage A. H., Physician, 1153 Gates Ave.	791
North N. L., Phys. and Surg., 627 Bedford Ave.	746
Wyckoff R. M., Phys. and Sanit'n, 532 Clinton Ave.	750
<b>BUFFALO, N. Y.</b> Population, 389,000.	
Bruso C. F., Phys. and Surg., 1112 Main St.	789
<b>CARROLLTON, MO.</b> Population, 3,878.	
Austin Chas. S., Physician.	755
<b>CHAMPAIGN, ILL.</b> Population, 7,500.	
Ross W. Frank, Phys., Surg. and Sanitarian.	713
<b>CHENOA, ILL.</b> Population, 1,226.	
Holderness E. P. G., Physician and Surgeon.	764
<b>CHICAGO, ILL.</b> Population, 1,800,000.	
Brockway Vir A., Physician, 103 State St.	814
Clark J. A., Gynecologist, 70 State St.	784
Cunningham E. M., Phys. and Ocul., 66 Walton Pl.	812
Engert Rosa H., Physician, 486 N. Clarke St.	810
Vincent E., Physician and Surgeon.	790
Wenzlick Wm., Physician and Surgeon, 77 Rush St.	781
Wesley Allen A., Phys. and Surg., 3102 State St.	777
<b>CHICOPEE CITY, MASS.</b> Population, 16,427.	
Gibbs Locero J., Physician, 31 Broadway.	716
<b>CINCINNATI, OHIO.</b> Population, 400,000.	
Amick M. L., Phys. and Neurol., 1930 Central Ave.	720
Bickmore L. M., Gynecologist and Neurologist.	796
Bloyer Wm. E., Physician and Surgeon, 1526 Elm St.	811
Buckner J. H., Ocul., Aur. and Laryn., 333 E. 4th St.	727
Carey M. T., Physician and Surgeon, 752 W. 7th St.	728
Carpenter Julia W., Physician, 908 E. McMillan St.	719
Conner P. S., Surgeon, 215 W. Ninth St.	800
Crawford J. M., Nose, Throat and Chest, Neave Bldg.	815
Crosby Sara M., Physician, 280 Elm St.	723
Dandridge N. P., Phys. and Surg., 422 Broadway.	790
Everts Orphens, Alienist and Neurol., College Hill.	715
Felter H. W., Physician and Surg., 1733 Chase Ave.	797
French J. M., Physician and Surgeon, 420 W. 7th St.	786
Glaeser Bertha L., Phys. and Gynecol., 428 W. 8th St.	815
Herron T. G., Phys. and Gynecol., 435 W. Seventh St.	721
Holmes C. R., Oculist and Aurist, 8-10 E. Eighth St.	815
Jones J. E., Phys. and Surg., 911 McMillan St.	803
Kirk Ellen M., Physician, 223 W. Seventh St.	808
Keller M. J., Physician, 27 Arcade.	729
Kelley W. I., Rectal Diseases, 413 W. Eighth St.	730
McDowell W. G., Rectal Diseases, 10 W. Seventh St.	720
Owens Wm., Physician and Surgeon, 500 W. 7th St.	718
Palmer C. D., Obstet. and Gynecol., Avondale.	722
Pfuntner C. H., Venereal Diseases, 1114 Elm St.	792
Siewers Sarah M., Phys. and Gynecol., 747 W. 6th St.	726
Taylor Wm. F., Venereal and Skin Diseases, 235 E. 4th St.	718
Thomas R. L., Physician, 792 E. McMillan St.	794
<b>CLEVELAND, OHIO.</b> Population, 385,000.	
Pomeroy H., Physician and Obstet., 526 Prospect St.	74
<b>COLUMBUS, IND.</b> Population, 8,000.	
Banker A. J., Surgeon and Gynecologist.	787
McLeod A. J., Physician and Surgeon (deceased).	774
<b>CONNERSVILLE, IND.</b> Population, 5,006.	
Dillman L. D., Physician and Surgeon.	724
Hamilton S. N., Physician and Surgeon.	782
<b>DECATUR, ILL.</b> Population, 16,841.	
Catto Wm. M., Physician and Gynecologist.	805
Chenoweth C., Surgeon and Gynecologist.	785
Jones H. C., Physician and Surgeon.	756
<b>DETROIT, MICH.</b> Population, 320,000.	
Brumme Carl C. G., Physician and Obstetrician.	761
Covey C. E., Physician and Surgeon.	732

<b>EDINBURG, IND.</b> Population, 2,031.	
Howe R. M., Surgeon and Gynecologist.	715
<b>EVANSTON, ILL.</b> Population, 22,000.	
Brayton Sarah H., Physician.	810
<b>EVANSVILLE, IND.</b> Population, 70,000.	
Le Hardy J. C., Eye, Ear, Nose and Throat.	801
<b>FLAT LICK, KY.</b> Population, 300.	
Baughman J. N., Physician.	763
<b>FORT WAYNE, IND.</b> Population, 35,393.	
Whery Mary A., Physician and Gynecologist.	714
<b>FRANCESVILLE, IND.</b> Population, 403.	
Murphy R., Physician and Surgeon.	788
<b>GONZALES, LA.</b> Population, 45.	
Fridgo J. R., Physician.	737
<b>GREENCASTLE, IND.</b> Population, 5,000.	
Bence G. W., Oculist and Aurist, 105 E. Wash. St.	779
<b>GREENFIELD, IND.</b> Population, 3,100.	
Adams M. M., Physician and Surgeon.	755
<b>GREENWOOD, IND.</b> Population, 862.	
Wishard J. M., Physician and Surgeon.	777
<b>HANSON, MASS.</b> Population, 1,379.	
Thomas F. S., Physician and Gynecologist.	709
<b>HOLMESVILLE, OHIO.</b> Population, 400.	
Cole Edgar, Physician and Surgeon.	712
<b>HUNTSVILLE, ALA.</b> Population, 14,000.	
Duffield A. M., Physician, 307 W. Clinton St.	772
<b>INDIANAPOLIS, IND.</b> Population, 175,000.	
Barnhill J. F., Nose and Throat, 412 N. Delaware St.	731
Casebeer J. B., Physician and Surgeon.	795
Comings J. A., Surgeon, When Block.	759
Courtney T. E., Physician and Surg., 14 E. Ohio St.	785
Culver D. M., Physician, 743 Fletcher Ave.	778
Cunningham H. S., Phys. and Surg., 137 W. Market St.	779
Durham C. O., Phys. and Surg., 602 S. Illinois St.	803
Ewing C. K., Nose, Throat and Lungs, 821 "Stevenson."	770
Garstang R. W., Phys. and Surg., 44 E. Ohio St.	790
Hasty George, Phys. and Surg., 39 W. Ohio St.	775
Heath F. C., Oculist, 17 W. Ohio St.	775
Keller Amelia R., Phys. and Gyn., 623 S. Meridian St.	809
Long Henry, Phys. and Surg., 232 Massachusetts Ave.	776
McMahan C. Agnes, Phys. and Gyn., "Willoughby."	792
Madsen Mary M., Physician, 116 N. Senate Ave.	808
Malpas S. H., Phys. and Surg., 31 E. Ohio St.	784
Manker F. E., Phys. and Surg., 137 W. Market St.	792
Parsons J. S., Physician, 510 W. Washington St.	786
Spink Mary A., Physician, Surgeon and Neurologist, 218 N. Alabama St.	788
Teague A. E., Phys. and Surg., 116 N. Senate Ave.	806
Wilson C. A., Orthopedic Surgeon, 122 W. Ohio St.	800

# PRESS NOTICES

OF STONE'S BIOGRAPHY OF EMINENT AMERICAN PHYSICIANS AND SURGEONS.

**THE INDIANAPOLIS JOURNAL.**—"The above publication is a cyclopedia of medical biography, containing life sketches and extensive memoirs of the most distinguished men of the profession as found in the more important towns and cities in the United States of America, and appears to owe its origin to a desire upon the part of the editor to present a book differing in scope, plan and arrangement from all others hitherto published, by including an account of the many illustrious men who have honored the medical profession from early colonial days to the present time, and to place their services and claims for remembrance more conspicuously than has yet been done before the American people. With all the features indicated, such a work is sure to prove of general interest and permanent historical value. In its preparation the editor and publishers appear to have spared neither time, labor nor expense in rendering work as complete in all its details as possible, and one that will prove not only entertaining but instructive or educational as well. The reading world has long desired a standard and reliable work of this character, and the one by Dr. Stone presents an exceedingly attractive appearance. It will doubtless have an extraordinary sale."

**INDIANA MEDICAL JOURNAL (Indianapolis).**—"This biography is the first approximately adequate list of our representative living men. Dr. Stone has not only made a biography indispensable to all lovers of American history, but has also made a literary monument for himself, which for solidity of foundation, exalted superstructure and grace of ornamentation, will be a surprise to thousands who do not know the author, but whose name and honest and thorough work is now permanently thrust upon the public attention. The Indianapolis subscribers, to a man, are proud of the good work done by Dr. Stone."

**THE JOURNAL OF THE AMERICAN MEDICAL ASSOCIATION (Chicago).**—"The introductory by Dr. Stone is admirable in style, interesting, and highly instructive. It consists of a "general review of the progress and present condition of medical science and medical practice in the United States of America," and the subject is exhaustively treated. The author concludes the introductory by a plea for the creation of a Department of Public Health as a fitting conclusion of the work of the present century of American medicine. We congratulate Dr. Stone on the completion of this truly great work, and as "history is philosophy teaching by examples," and "biography the heart of history," so this heart of the medical history of our time should be read and studied by every progressive American physician. The author of a work of this character, a volume devoted to the achievements of the profession itself, should receive at the hands of his brethren that financial encouragement which only a subscription to the work can give."

**THE MEDICAL PROGRESS (Louisville).**—"In every other department of medical literature than that of the histories of our medical men, we are almost overrun with books. And yet to the present and future generations of physicians and their friends there is no subject which should, and probably will, create so much interest. Under the circumstances the time is ripe, and we believe the profession will appreciate very much just such a book as Dr. Stone has produced. After having consulted it freely we feel secure in pronouncing it the best work of its kind now in print. It is fully indexed according to cities and towns. We predict a large demand for the book."

**BUFFALO MEDICAL AND SURGICAL JOURNAL.**—"But few attempts have been made to publish biographical cyclopedias of American physicians. Dr. James Thatcher, of Massachusetts was first to perform this duty, in a work published in 1828. Next came the work edited by Dr. Stephen W. Williams, published in 1845, which was supplementary to that of Dr. Thatcher. Dr. Samuel D. Gross was the third to enter this field, and the work he edited was published in 1861, while the fourth was published in 1878 by Dr. William B. Atkinson. The fifth venture in this line (that of Dr. Stone) is the work before us, which is offered to the profession as the most complete encyclopedic medical biography yet written. The biographical sketches are arranged alphabetically, many of which are carefully written and enter into great detail. The sketches of some of the historic characters in medicine, now dead, are of a high order and serve to enhance the value of the work. Those of David Hosack and Benjamin Rush are exceptionally fine and invaluable. The value of this work is beyond question. It is needed for reference in the office of every progressive physician, while teachers, authors, editors and scientific writers cannot afford to be without it. All medical libraries, too, should make haste to obtain it, while general libraries must assuredly place it upon their shelves."

**THE ALIENIST AND NEUROLOGIST (St. Louis).**—"The materials of this great and meritorious work have been judiciously collated and placed in readable form with rare judgment and graphic skill. It should be in the library of every physician and humanitarian of America."

**MEDICAL BULLETIN (Philadelphia).**—"In this work Dr. Stone has brought together a vast mass of biographical material. We find in its pages detailed accounts of the lives of the leaders of the American profession from colonial days to the present time. Not only does it deal with the master minds of medicine, but it also embraces the lives

of those pupils by whom the beneficent teachings of great authorities are carried to suffering humanity thru the whole length and breadth of the land. Dr. Stone accomplished his generous task with judgment and care, and the work before us should receive a wide circulation."

**MEDICAL RECORD (New York City).**—"This work contains seven hundred and fifty double-column pages of biography, with photo-engraved portraits of deeds of medical men. The editor has evidently done his best to give an impartial record of the subjects treated, due credit must be accorded him for honesty of purpose and purity of motive. The accounts of distinguished deceased members of the profession are singularly good, and important and interesting chapters to the history of achievements in America. The photo-gravures have been carefully made. The book will be interesting to a wide circle of curious readers."

**THE MEDICAL FORTNIGHTLY (St. Louis).**—"The American profession, in its vast strides toward the front rank in affairs medical and surgical, well deserves such a monument as this: A cyclopedia of American medical biography, prepared in a style worthy of the undertaking. We hasten to award our commendation of the work to Dr. Stone."

**ATLANTA MEDICAL AND SURGICAL JOURNAL.**—"Such information as is contained in this volume will often be found useful to every one. The presents here a short sketch of the lives and labors of the most eminent American physicians and surgeons. His biography is one of the best that is now offered to the profession. The selection of names and the space allotted have been marked with good judgment generally, and an author has very wisely gone into some detail with the physicians and surgeons who have made American medicine famous, such as Rush, Physick, McDowell, Dudley, W. Agnew, Davis, Sims, Emmett, and others. It will be of especial value to those interested in the history of American medicine."

**NEW ENGLAND MEDICAL MONTHLY (Danbury, Conn.).**—"It indeed takes an artist (of course) to edit gracefully, tastefully and justly, a volume of biographical sketches of any class of eminent men, especially is this true of him who edits well a biography of eminent physicians and surgeons of America. The volume before us certainly is a model of its kind, and a talented editor is to be congratulated on his eminent success."

**THE CHARLOTTE MEDICAL JOURNAL (North Carolina).**—"The author has included in this large and magnificent volume biographical sketches presented with sufficient fullness the latest results of our scientific and historical research, and has arranged them in alphabetical order, thus rendering it a reference book of the most valuable character. The mechanical part of the work is faultless and will adorn any library."

**ST. LOUIS MEDICAL AND SURGICAL JOURNAL.**—"When we hear of a man frequently mentioned in the press, we naturally desire to know more of the individual as a person, and the next best thing to a personal acquaintance is a portrait of his knowledge of his history and a portrait presentation of his appearance. This latter is what the work before us presents to us, and we must confess that it does it in a thoroughly pleasing manner. Many names have sprung up in American medicine deserving of perpetuation, and what a graceful way could be devised than by including them in their peers and compatriots? Whilst the biographies are not prolix, they are sufficiently full to be satisfactory. We have been much taken with this volume, and we expect it will find corresponding favor in the eyes of the profession. It forms a handsome volume, fit to adorn any library when our friends who are noticed in it have departed, it will prove a pleasure, sad though it may be, to look once upon the pictures of their once familiar faces."

**UNIVERSITY MEDICAL MAGAZINE (Philadelphia).**—"The necessity of rewriting American medical biography has resulted in the present volume. A physician must be interested in familiarizing himself with the histories of distinguished men in the profession, and yet few have time to search out the dusty biographies on the shelves of the library and plod through long pages of minutiae. The value of having the pith of such work extracted and put in a form available to all will be appreciated by a large number of the profession."

**NEW ORLEANS MEDICAL AND SURGICAL JOURNAL.**—"It is natural for us to desire to know something of the personal characteristics of a medical man who has by his labors brought himself into honorable prominence. Such a book as Dr. Stone's 'Biography' is always a welcome visitor. It almost gives us a personal introduction to the men written about. No such publication has appeared for many years. He has worked on it from 1891 to 1894, a delay being caused by the failure of contributors to their matter in promptly. Over 1,200 biographical sketches are given, forming an attractive volume replete with interesting information. We commend it to our readers with the conviction that it will prove a source of much pleasure to those who take an interest in medical affairs, and the who are constantly adding to our store of medical knowledge."

<b>SOCORRO, N. M.</b> Population, 4,200.
